Day 31  
Afternoon Session

TRANSCRIPT OF BENCH TRIAL  
BEFORE THE HONORABLE AMIT P. MEHTA  
UNITED STATES DISTRICT JUDGE

APPEARANCES:

For DOJ Plaintiffs:      **KENNETH DINTZER**  
                                    U.S. Department of Justice  
                                    1100 L Street, NW  
                                    Washington, DC 20005

P R O C E E D I N G S

1  
2           **THE COURT:** Welcome back, everyone. Ready when you are,  
3 counsel.

4           CONTINUED DIRECT EXAMINATION OF BENEDICT GOMES

5 **BY MR. SMURZYNSKI:**

6           **Q.** Thank you, Your Honor.

7           Before the lunch break, Dr. Gomes, we were talking about  
8 the pivot to mobile?

9           **A.** Yes.

10          **Q.** And if we could put a slide up. What was different  
11 about the mobile experience as compared to desktop?

12          **A.** You know, almost everything was different about the  
13 experience, the phone in terms of how you interacted with it.  
14 The first thing was that it was a small device where it was  
15 hard to type. So unlike on a laptop you didn't have a  
16 keyboard, so input was difficult. So we have to think about  
17 how the ways in which we're going to make input easier for  
18 people to do so that they can actually like type in queries  
19 easily. So we worked on several things around that. We  
20 worked on things like autocomplete. We worked on increasing  
21 the amount of coverage we could get for autocomplete with new  
22 algorithms. We worked to bring spelling correction into  
23 autocomplete so that you can get a spelling correction as  
24 you're typing, not just after you've typed.

25          We also began to put a lot of energy into voice search

1 which connected to all of the research that we were doing on  
2 machine learning. And voice search was improving over time,  
3 but this -- it got a lot better at this point. You know,  
4 when I first started using voice search, there was one person  
5 on the team who could use it who had the perfect Midwestern  
6 accent. And I have this mixture of a British and Indian and  
7 whatnot accents, and I could never do the demos.

8 But by the end of it, I was once in a cab where a person  
9 with a much heavier accent than I did was using the phone.  
10 And he said -- I said: "It understands you?" He said:  
11 "Yes." He said: "People don't understand me, but Google  
12 does." And so we made a huge amount of progress there, but  
13 that's what we figured was necessary in order for people to  
14 actually be able to enter queries or they wouldn't do that on  
15 a phone, they could tap on other apps to get to -- as an  
16 alternative.

17 **Q.** So you mentioned voice search, and you also mentioned  
18 autocomplete. How is autocomplete important to the mobile  
19 experience, and getting that right important?

20 **A.** It was even more important, the mobile experience,  
21 because since typing was hard, if you -- it took you a long  
22 time to type and you tended to make more mistakes. So we had  
23 to actually make sure that your -- we had more coverage over  
24 queries, we had to have coverage over queries that we didn't  
25 have before. So we came up with something called tail

1 suggest which is queries that have never been typed in but  
2 are completions of the --

3 **COURT REPORTER:** I'm sorry, can you please slow down.  
4 Thank you.

5 **THE WITNESS:** Oh, sorry. We came up with a system called  
6 tail suggest which allowed you to enter in queries that had  
7 never been typed before, but we had a dot-dot-dot notation.  
8 It began to give you coverage over parts of the query stream  
9 that we didn't have before. And we came up with new  
10 algorithms for autocomplete, so the coverage of autocomplete  
11 increased over time. We also had to come up with keyboards.

12 So I studied Hindi in school for 10 years. And people  
13 are coming onto phones for the first time, and I don't know  
14 how to type Hindi, even though I studied it in school.  
15 People didn't have access to keyboards before that, because  
16 the phone was the first time they'd come across an interface  
17 they could use. So we came up with new keyboards even for  
18 these other languages.

19 **Q.** Let's advance the slide. What was this observation  
20 about in mobile?

21 **A.** The next thing is that you look at the results, and a  
22 mobile screen is small. If you think about a desktop screen,  
23 there's a lot of space on which to show a lot of different  
24 information. The screen is very small, and the pages are  
25 slow to load. So people have a small amount of real estate

1 which to like consume what they want. And they kind of want  
2 the answers quickly. So what we had to do is work on systems  
3 of answers. We had a system called featured snippets, or web  
4 answers, which we developed in order to actually begin to  
5 show in place the answers to quick queries. And you can go  
6 to the web page if you needed to, but if it was just a quick  
7 thing you needed, you could get the snippet right there.

8 Also using the knowledge graph, we could begin to answer  
9 queries, like what is the capital of France, from the  
10 knowledge graph. Because, you know, France is a country, it  
11 has a capital, the capital is Paris. And we can even begin  
12 to do follow-up queries around that, because we could use the  
13 knowledge graph with its billions of facts to answer a whole  
14 range of queries. And we begin to -- we began to make all  
15 kinds of other features within the result page, because the  
16 nature in which people were getting information today was  
17 changing -- at that point was changing. People were  
18 beginning to consume a lot more social networking information  
19 and -- like Facebook. And Facebook was little blocks of  
20 information that they used to scroll through that were really  
21 very visual. So people were beginning to expect a much more  
22 visual search experience, so we made our results much more  
23 visual. We brought in images into the results. We brought  
24 in structured snippets which would tell you things like star  
25 ratings and other things just within the snippet itself --

1 prices and so on, within the snippet itself.

2 So there were lots of features we added in order to make  
3 sure that the user could get as much information as they  
4 needed as quickly as possible. Because the pages are slow to  
5 load, people were hesitant initially -- I think it's hard to  
6 remember just how slow the web was -- sorry, just how slow  
7 the web was at that time. It took a long while when you  
8 clicked on a link to actually get the page. And so people  
9 were reluctant to do that unless they had to. And there was  
10 a lot of movement towards, well, the solution is apps, and  
11 everyone's going to tap on an app and they're going to get  
12 their answer right there. So that is what we had to compete  
13 against.

14 **Q.** We're used to mobile networks today. But in 2007,  
15 when Google first started working on mobile search in 2000,  
16 that early period, as we saw the very small portion of the  
17 query stream being on mobile, remind us, what was that  
18 experience? I mean, what was the -- what did you see when  
19 pages were trying to load on a screen in those days?

20 **A.** I mean, there's a lot of waiting. First of all, you  
21 typed in your query, and there's a lot of waiting. And you'd  
22 get the result page, and then when you tapped on the result,  
23 quite often you'd go to a page that was not formatted for the  
24 mobile screen. So it was a huge -- a large page, and you had  
25 to double tap or expand it out -- and sometimes you expanded

1 it too much. So it was really quite difficult to get the  
2 information you wanted. And so our goal was to try and  
3 figure out how do we evolve the search product to make it  
4 really usable on mobile, to actually serve that information  
5 need that users had.

6 Q. And there's a reference on the screen to search  
7 features. How did that interact with the mobile experience?

8 A. So we -- the term search features was used to refer  
9 to all of the different changes we made into the interface of  
10 search. Even things like universal search would be  
11 considered a search feature. Some of those things became a  
12 lot more important in mobile, because people were expecting  
13 sometimes more visual results in terms of images and videos.  
14 They were expecting to see results on the page that looked  
15 like little blocks, as they were used to on Facebook. So all  
16 of those things were things we were thinking about as to what  
17 should the interaction be like on mobile.

18 Q. And there's a reference there to web answers. What  
19 are web answers?

20 A. Web answers, the idea is that if you can look at a  
21 query and look at a result page that is about -- that may  
22 contain the answer, web answers might be able to pick out the  
23 section of the page that is very close to an answer to what  
24 you -- your query was. It was what we called featured  
25 snippets when we launched it. But the idea was to actually

1 answer as much as we could based on the query you had typed  
2 in.

3 Q. And why was working on web answers important to the  
4 mobile experience?

5 A. It was really important, because it was so slow to  
6 click on the page. So if you really needed more information,  
7 you could click on the page, but it was really important for  
8 you to get as much information as you could right up front.  
9 So we tried to provide you if it was just a brief fact you  
10 wanted, to get it right there. In terms -- we tried to do  
11 that also with things like sports scores. People are coming  
12 to be able to find the sports score, and we had to provide  
13 that right there. So we had to license data for things like  
14 sports or for stock tickers and a whole bunch of things of  
15 that sort. We paid a lot more attention to licensing that  
16 kind of information so that you could provide that  
17 information right there in the moment so that they didn't  
18 have to go someplace else. If you wanted to find out the  
19 details of how the game was played, well, it was fine then to  
20 go to another site. But if you just wanted the score, we  
21 could license that information and provide it to you.

22 **THE COURT:** Sorry to interrupt, if I can ask a question.  
23 You've referenced a number of times how users felt or what  
24 the user experience was. How, at a high level, does Google  
25 get that feedback from users to reach those types of

1 conclusions?

2           **THE WITNESS:** So we do a lot of user studies. We have a  
3 user experience group that actually has -- that does studies  
4 in labs, sometimes where a person is doing those kinds of  
5 queries on a device. And we'll -- and to try and understand  
6 exactly how users are interacting with the device. So at  
7 that point, you can also ask some questions of like what was  
8 difficult, what wasn't, and come to a better understanding of  
9 what's happening. And we did -- we typically do these also  
10 in many places in the world, because experience might be  
11 different.

12           **THE COURT:** Okay, thank you.

13 **BY MR. SMURZYNSKI:**

14           **Q.** Let's advance one more. What's this observation:  
15 "The phone is with you everywhere"?

16           **A.** So unlike your laptop or your desktop -- and desktop  
17 computers, the phone is in your pocket -- is beginning to be  
18 a computer that's with you everywhere which means that your  
19 expectations of the answers it gives you are beginning to  
20 change. You're beginning to expect to find answers that are  
21 near you. So if I'm searching, I don't know, for a  
22 restaurant, I'm expecting to find not necessarily the best  
23 restaurants in my city, but the restaurants that might be on  
24 the street that I'm on, if I'm looking for a restaurant right  
25 there. I may not be looking for the home page of a company,

1 I might be looking for the local version -- the local  
2 instance of that company. So there are many ways in which  
3 local information begins to really matter. So we invested  
4 even more in getting a comprehensive catalog of local  
5 businesses that we could surface in these cases, and making  
6 sure that they ranked appropriately in these cases. Even  
7 within ranking, making sure that you're getting localized  
8 information, because we know where the phone is, if you give  
9 us that information. And so we can give you information  
10 that's relevant to you very locally; like, for instance, the  
11 town you live in, not just the general area.

12 Q. Let's roll forward again. There's an observation  
13 that many users were mobile-centric or becoming  
14 mobile-centric. What do you mean by that?

15 MR. DAHLQUIST: Same objection to leading, Your Honor.  
16 Now he's putting the screen up and prompting him.

17 BY MR. SMURZYNSKI:

18 Q. Dr. Gomes, were you involved in the creation of these  
19 demonstratives?

20 A. Yes.

21 Q. What is this observation?

22 A. So the other thing that's happening here is people  
23 are coming online for the first time in many countries who  
24 have never seen a desktop or a laptop before. The phone is  
25 the first device that they have. And so their main

1 attraction is with the phone. They're not used to  
2 necessarily thinking about the web, they're thinking about  
3 the apps they have on their phone. In some places like  
4 Africa, the internet became Facebook, because that was most  
5 of the content that people saw. And even in the -- in  
6 countries like the U.S., a lot -- people are spending a huge  
7 amount of time on social networking apps like Facebook. And  
8 a huge amount of content creation was happening there as well  
9 as content consumption.

10 So it was a question of people were seeing that as the  
11 natural way to interact with a phone versus dealing with the  
12 open web, which had a lot of challenges at the time. The  
13 pages were not necessarily fast, they were not necessarily  
14 mobile friendly. Whereas many of these platforms had pages  
15 that were fast and mobile friendly, and we had to bridge that  
16 divide. So we had to figure out how to make -- deal with a  
17 world where we could make sure that the open web and our  
18 product was mobile friendly.

19 **Q.** And I don't know if you could advance it, there's a  
20 reference there to more visual image search. What are you  
21 addressing there?

22 **A.** Yeah, so as I was saying, with the phone, and with  
23 services like Facebook -- and I guess Twitter and so on,  
24 whenever that came about, there were -- people were used to  
25 seeing a much more visual interface and lots more images.

1 And the people who were coming online were just getting used  
2 that presentation. Visual images also are processed very  
3 quickly by the brain. So if we can provide that kind of  
4 visual imagery, it actually is a really fast way to process  
5 your results. But it has its challenges: How do you pick  
6 the right image from a page; how do you make sure that it's  
7 relevant to the -- it also tends to slow down the page. So  
8 lots of challenges in making sure that this works well.

9 So we had to -- we were trying to make sure that our  
10 results became more visual -- and we thought of it as more  
11 modern in that sense -- compared to how the phone was  
12 evolving, and pushing the web, to some extent, in that  
13 direction. Translation became another important thing,  
14 because, again, people are coming online in webs that did not  
15 have much English content or major language content. So for  
16 instance, we had a huge number of people coming online in  
17 Hindi who had never -- and there was not almost any -- no  
18 Hindi content on the web. So could we use translation to  
19 bring English language content to people who didn't speak --  
20 who weren't speaking a language that, you know, didn't have  
21 much content.

22 So we began efforts like translating English Wikipedia  
23 into other languages. It's tricky to get it right, because  
24 sometimes there's low quality content in that language versus  
25 high quality content in English, but your translation may not

1 be as good. So you have to work this through until your  
2 translation is really good. And we used machine -- machine  
3 learning was coming into real force at that time, and  
4 translation was beginning to, again, work really well.

5 Q. And then there's a reference there to  
6 scrollable-swipeable content. What was --

7 A. Yeah, so there's --

8 Q. -- happening with that in the mobile environment?

9 A. Yeah, so there's a different kind of interaction with  
10 a phone where you're actually -- it's easy to scroll, so you  
11 can go through many pages of text there, but there's not much  
12 screen real estate sideways unless you swipe. So there are  
13 ways to take advantage of this in our user interface design,  
14 and we were thinking of all kinds of different ways to take  
15 advantage of this. Because you've got this disadvantage that  
16 your screen is so small, but you've got an advantage that  
17 people can scroll in both directions quite easily.

18 So how do you construct the page to take advantage of  
19 that, especially in a product that people are somewhat  
20 familiar with on the desktop, and they expect it to work a  
21 certain way. So we were trying to evolve the product to  
22 actually make that become -- to take advantage of those  
23 facts; so take advantage of the scrollability and the  
24 swipeability. Many of our carousels -- what we called  
25 carousels, became swipeable for images, for videos, for lots

1 of things that we were showing.

2 Q. And then the next point here: "The ecosystem needs  
3 to evolve," what did you mean by that?

4 A. So, we depend on the open web and the open web  
5 ecosystem. Places like Facebook are creating their own  
6 ecosystem. So for us, in order for us to do -- to serve our  
7 users' needs, the information we have access to is on the  
8 web. If the web is not in a good place, we are not in a good  
9 place. So we needed to make sure that the web was evolving,  
10 and we started talking to webmasters about the ways in which  
11 they needed to improve their sites. We were paying attention  
12 to this far before anybody else -- other people were, because  
13 even though it was a small fraction of our traffic, we  
14 believed this was going to be the future. Whereas many  
15 websites were saying, well, this is not a big fraction of my  
16 traffic, why do I need to care.

17 And so we were trying to evangelize the fact that this is  
18 something that -- where the future's heading, please pay  
19 attention to it. So we did a couple of things. We  
20 encouraged websites to have mobile-friendly pages, and we  
21 said we'll give you a slight ranking boost if you do that.  
22 And we also encouraged them to have fast loading pages, and  
23 said, again, we'll give you a slight ranking boost if you do  
24 that. Because we wanted to encourage their ecosystem to  
25 actually move towards this mobile world. We were really --

1 it was really critical for us that the whole web evolve, not  
2 just us.

3 Q. You mentioned some ranking incentives, if you will,  
4 or prioritization. Were there other efforts that Google  
5 undertook to help the web ecosystem become a more  
6 mobile-friendly place?

7 A. Well, we actually tried to create infrastructure that  
8 other people could use. I was not involved in the details of  
9 that, but there were teams working on making sure that the  
10 web infrastructure was actually improving and advancing. We  
11 created some tools of our own. So there were many things we  
12 were trying to do in the space to push that forward to make  
13 the web just much faster and more usable on a phone.

14 Q. And with respect to these important differences in  
15 the mobile experience in Google's reactions, how significant,  
16 if at all, was a large volume of mobile queries to causing  
17 these innovations?

18 A. I mean, this was happening at a time when our traffic  
19 was -- the mobile traffic was a small fraction of our web  
20 traffic. So this was largely driven by our ideas about what  
21 we wanted to do. Some of these ideas may have used some  
22 amount of click data or query data, but many of them, like  
23 local search, it was a matter of collecting all that  
24 information from places around the world. Localization of  
25 ranking was a matter of using the ranking -- the local signal

1 coming from the phone, and figuring out what does that mean  
2 for your results. The knowledge graph is a matter of  
3 bringing all the data from all these sites together.

4 So voice search is, again, a matter of, like, doing the  
5 machine learning improvements in order to make those -- make  
6 voice search work; and likewise with translation. So a lot  
7 of this was based on, like, basic ideas we had to improve  
8 this interface with search.

9 Q. How would you, from the standpoint of today, view  
10 Google's pivot to mobile, was it a success?

11 A. I believe so. I believe so. I think we put a lot of  
12 effort into it, and I think it worked. It was not obvious at  
13 the time, but it worked.

14 Q. How would you describe the competitive landscape that  
15 Google faced, particularly in mobile?

16 A. I think, at that time, the competitive landscape --  
17 well, there were other search engines, but the competitive  
18 landscape was changing to be a whole collection of apps. So  
19 the phone was just one tap, you could go to your browser.  
20 But there's also a whole slew of other apps you could go to  
21 to satisfy the same information needs. So if you think about  
22 it, our goal is to satisfy your information need. There are  
23 lots of places you can go. Facebook was providing  
24 information about -- it had forums on every topic. There  
25 were places like Amazon. There were places -- there were

1 places for ordering food. There were places -- there were  
2 places for every different kind of thing -- information need  
3 you might have. And sometimes we could satisfy it in more  
4 depth than we could with a dedicated app.

5 So we had to compete with that whole ecosystem of apps.  
6 And the slogan at the time was: "There's an app for that."  
7 So we had to make sure that the open web actually stayed a  
8 viable contender for your information needs; not just us, but  
9 the open web as a whole was a viable contender versus these  
10 closed ecosystems like Facebook and so on that were also  
11 growing dramatically at this time.

12 **MR. SMURZYNSKI:** Thank you, Dr. Gomes. I have no further  
13 questions.

14 Your Honor, I'd move the demonstrative DXD27 in the same  
15 fashion that we've done with the other demonstratives.

16 **MR. DAHLQUIST:** If it's just for demonstrative purposes,  
17 we have no objection.

18 **THE COURT:** It will be admitted for that purpose.

19 (Exhibit DXD27 admitted into evidence)

20 **CROSS-EXAMINATION OF BENEDICT GOMES**

21 **BY MR. DAHLQUIST:**

22 **Q.** Good afternoon, Dr. Gomes.

23 **A.** Good afternoon.

24 **Q.** Do you prefer to be called Dr. Gomes or Mr. Gomes?

25 **A.** Anything works.

1           Q. Well, you did the hard work, I'll call you Dr. Gomes.  
2 Dr. Gomes, my name is David Dahlquist. I represent the  
3 United States Department of Justice, and I'd like to ask you  
4 some more questions based on what your counsel asked you  
5 today as well as some documents that you've written during  
6 your time at Google.

7           Just to clarify a few points, you started in Google in  
8 1999, correct?

9           A. Yes.

10          Q. And when did you become -- I guess I want to  
11 understand your role. You worked in the search group at  
12 Google your entire time prior to your most recent promotion  
13 into the Google Classroom type of work, correct?

14          A. Into learning education sustainability, yeah.

15          Q. So from 1999 until about 2020, you worked on Google  
16 search, correct?

17          A. Yes.

18          Q. And around 2016, I believe you said you became a VP  
19 of the core -- I just want to make sure I understand your  
20 testimony. If you could repeat that for me.

21          A. Yeah, I became VP of the core search team, which was  
22 a portion -- a large -- some large chunk of the search team.

23          Q. So you became VP of core search in 2016?

24          A. Yes.

25          Q. And 2017, you became the SVP of all search, correct?

1           A. I think it was '18.

2           Q. 2018 you became the SVP of all search, correct?

3           A. I think my title was initially VP, I became SVP a bit  
4 later. The title changed not at exactly the same time.

5           Q. And so from 2018 until 2020, you served as the SVP of  
6 search?

7           A. Roughly, yes.

8           Q. Great. The current head of search at Google is  
9 Dr. Raghavan, correct?

10          A. Yes.

11          Q. He was your successor --

12          A. Yes.

13          Q. -- after you left --

14          A. Well --

15          Q. -- in 2012?

16          A. -- he leads search as well as other parts of the  
17 company.

18          Q. Correct. He currently has the title head of search,  
19 but there are other departments that were rolled underneath  
20 him as well, correct?

21          A. I believe his title is knowledge and information.

22          Q. You took over the role of head of search from  
23 Mr. Giannandrea, correct?

24          A. His role was also a bit different, he was running  
25 both research and search.

1           Q. And Mr. Giannandrea is currently employed at Apple,  
2 correct?

3           A. Yes.

4           Q. When you were head of search at Google, who did you  
5 report directly to, Mr. Pichai?

6           A. Yes.

7           Q. I'd like to ask you a couple of questions about the  
8 demonstrative that your counsel went over with you. And I  
9 believe you said you had a role in preparing these  
10 demonstratives; is that correct?

11          A. Yes.

12          Q. And that was in preparing for your testimony at your  
13 counsel's office, I presume?

14          A. Yes.

15          Q. Approximately how many hours did you spend preparing  
16 for your testimony today?

17          A. Today --

18          Q. Not today, sorry. In total, how much time did you  
19 spend preparing for your testimony in court?

20          A. I don't actually -- I've not accounted for it.

21          Q. More than 20 hours?

22          A. I don't think so.

23          Q. Less than 20 hours? More than --

24          A. I actually don't have any memory of how much time,  
25 I'd have to add it up.

1 Q. You don't recall how much time you spent preparing  
2 for your testimony today?

3 A. I don't have a concrete number to offer you.

4 Q. What's your best guess?

5 A. Maybe 10, 15 hours, I don't know.

6 Q. Thank you, sir. If you could turn to -- we don't  
7 need to put these on the screen, I just want to ask you about  
8 page four, which was sort of your listing of all the  
9 innovations, I believe, you talked about --

10 A. I mean, this -- by the way, that time was over  
11 previous depositions and all as well.

12 Q. Thank you. Looking at DDX27.004, which the title is  
13 just Key Early Innovations, you see there's the list of the  
14 six innovations you walked through with your counsel?

15 A. Yes, one second. Yes. Yeah.

16 Q. I'd just like to ask you -- I want to make sure we're  
17 clear on the dates. The first one you had is page rank?

18 A. Yeah.

19 Q. Page rank was launched around 1999; is that correct?

20 A. It was something they were experimenting with I think  
21 even before that, '98, '99.

22 Q. So '98, '99 is when page link was --

23 A. Yeah, it --

24 Q. -- or page rank was --

25 A. -- continued to evolve. What was called page rank

1 externally was something that evolved and had many  
2 algorithmic iterations over time. Because as the web got  
3 larger, you needed to change what the algorithm did in order  
4 to be able to do the computation.

5 Q. Is the algorithm that runs page rank still running  
6 today?

7 A. You'd have to ask Pandu about that. Some version of  
8 it, I'm sure, is.

9 Q. The next innovation you had was spelling.  
10 Approximately when did the spelling innovation come into  
11 Google?

12 A. I think 2001 or so. 2000, 2001.

13 Q. And is the spelling innovation still running at  
14 Google today?

15 A. Yes.

16 Q. Next is synonyms was around, I think you said, early  
17 2000s?

18 A. '03, '04 maybe, I don't know. I don't remember that  
19 date exactly, somewhere in that timeframe.

20 Q. And that synonym algorithm is still running today?

21 A. It is not an algorithm, it was -- that was the very  
22 beginning of it. It was just beginning to have an effect,  
23 and it just grew and grew. And now there are many more --  
24 much more complex systems than what were there. So it's not  
25 really accurate to say it's the same algorithm, it's quite

1 different.

2 Q. It's evolved --

3 A. It's evolved --

4 Q. -- since its --

5 A. -- yeah.

6 Q. -- launch in 20 --

7 A. Yeah, yeah.

8 Q. -- 2003?

9 A. Yeah.

10 Q. Autocomplete, approximately what year was that one?

11 A. I think it was 2006 or 7, somewhere there.

12 Q. Universal search, I believe, you said --

13 A. Around roughly --

14 Q. -- was around --

15 A. -- the same time.

16 Q. I'm sorry, I didn't --

17 A. Roughly the same time, I think.

18 **COURT REPORTER:** I'm sorry, but --

19 **THE WITNESS:** Sorry, my fault.

20 **COURT REPORTER:** -- if you'd like a record, you need to  
21 speak one at a time. Thank you.

22 **THE WITNESS:** My apologies.

23 **BY MR. DAHLQUIST:**

24 Q. Doctor, I will do my best to not interrupt you, and  
25 wait for a question and then I'll wait for an answer, how

1 about that.

2 Dr. Gomes, universal search, I believe you said, was  
3 around --

4 A. 2007, yes.

5 Q. And the knowledge graph, I believe you said, was  
6 around 2012 --

7 A. Yes.

8 Q. -- correct? Now, out of all these innovations, I  
9 believe Judge Mehta asked you a question about user feedback,  
10 correct, do you remember that --

11 A. Yes.

12 Q. -- question the Court asked you? The spelling,  
13 synonyms and autocompleate, each of those innovations, they  
14 relate to user queries, correct?

15 A. Spelling's -- yes, they do use user queries, but  
16 spelling in particular relies a lot -- more on the documents,  
17 because it's trying to get the correct spelling from the  
18 documents. Synonyms --

19 Q. Each of --

20 A. -- also uses the documents, yes.

21 Q. Each of the innovations of spelling, synonyms,  
22 autocompleate, they benefit and continue to improve based on  
23 query data, correct?

24 A. Yes.

25 Q. We're going to move to a different topic. Oh,

1 actually staying on this topic. You agree that having click  
2 and query data helps Google or any search engine to deliver  
3 better search results, correct?

4 A. Yes.

5 Q. And you agree that there's a relationship between a  
6 search engine having more user queries and having better  
7 quality, correct?

8 A. To a point.

9 Q. Having more queries helps with ranking search  
10 results, correct?

11 A. All of these signals are valuable up to a point.  
12 They begin to have diminishing returns beyond a certain  
13 point. There are a bunch of signals that go into ranking.  
14 Each of those has a value, but the value begins to diminish  
15 beyond a certain point.

16 Q. Sir, let me ask my question again. You agree that  
17 having more queries helps with ranking search results,  
18 correct?

19 A. Like I said, to a point. It's not infinite, the  
20 benefit.

21 Q. Your Honor, if I may approach.

22 Dr. Gomes, you were deposed in this matter on, I think,  
23 two occasions, if you recall: September 24th, 2020 and  
24 December 10, 2021. Do you --

25 A. Yes.

1           Q. -- recall that? We may reference this on a few  
2 occasions today, so I just handed you a binder with both  
3 depositions in them. And I'll try to reference which one  
4 we're going to look at. Right now, if you could please look  
5 at your deposition from September 24th, 2020, which should be  
6 in your binder. And if you could turn to page 115, we're  
7 going to look at lines 10 through 15. Let me know when  
8 you're there and I'll ask you a question. But if you could  
9 just -- are you at page 115 --

10          A. Yes.

11          Q. -- in your September 24th, 2020 deposition?

12          A. Yeah.

13          Q. Sir, on September 24th, 2020, were you asked the  
14 following question and did you give the following answer:

15            "Question: Okay. But there is a relationship between  
16 more users and search quality?"

17            "Answer: Some number of users provided -- having some  
18 number of users provides us with queries as well as clicks  
19 that are useful in ranking."

20          A. Yes.

21          Q. Were you asked that question, and did you give that  
22 answer?

23          A. Yes.

24          Q. Thank you. You can close your deposition. So you  
25 agree that queries are useful to help understand user needs

1 and evaluate search results, correct?

2 A. Yes.

3 Q. Clicks are also useful for determining what the  
4 interest of users are, correct?

5 A. They are useful, yes.

6 Q. Now, this Court has heard a lot of testimony about  
7 diminishing returns, which I think was a concept you were  
8 just trying to illuminate a moment ago.

9 Let me ask you this: As the former head of search at  
10 Google, you don't recall ever having looked at the question  
11 of when diminishing return sets in, correct?

12 A. I think we've looked at --

13 Q. Sir, I'm sorry, this is a yes-or-no question. If you  
14 can answer my question yes or no -- and I'll repeat it.

15 **MR. SMURZYNSKI:** Your Honor, I object to this attempt to  
16 prevent the witness from answering the question, even  
17 badgering him in this fashion.

18 **THE COURT:** I agree. Let him respond, and --

19 **MR. DAHLQUIST:** Certainly.

20 **THE COURT:** -- if his response is not satisfactory, you  
21 can follow up.

22 **BY MR. DAHLQUIST:**

23 Q. Thank you. I can re-ask my question, if you'd like.  
24 As the former head of search at Google, you don't recall ever  
25 looking at the question of when diminishing return sets in,

1 correct? Please.

2 A. I would not know the details of that. If anybody had  
3 looked at it, Pandu would have looked at it.

4 Q. I'm sorry, you don't know the details of when  
5 diminishing returns would set in, correct?

6 A. No.

7 Q. But you don't recall having looked into it; is that  
8 your testimony?

9 A. No, I don't recall in particular, no.

10 Q. So during your whole time at search from 1999 to the  
11 time that you turned over the role in 2020, you don't recall  
12 having looked at the idea of diminishing returns at search,  
13 correct?

14 A. This is something that Pandu would have looked at  
15 more than me.

16 Q. Thank you, sir.

17 **THE COURT:** And just to be clear, you're referring to  
18 Dr. Nayak?

19 **THE WITNESS:** Yes.

20 **BY MR. DAHLQUIST:**

21 Q. Thank you, Your Honor.

22 You talked in your direct examination about competition  
23 with search. Do you recall some of that testimony?

24 A. You can refresh my memory.

25 Q. I'm sorry, not your deposition --

1           **A.** There was 16 hours of testimony.

2           **Q.** That was my misspeak. In your testimony today from  
3 your counsel --

4           **A.** Yes.

5           **Q.** -- you talked about some of the competition?

6           **A.** Yeah.

7           **Q.** I'd like to ask you some more questions about that.  
8 You agree that Google is a general search engine, correct?

9           **A.** Yes.

10          **Q.** And a general search engine is one that attempts to  
11 answer all queries, correct?

12          **A.** Yes.

13          **Q.** Companies that offer general search engine services  
14 similar to Google today include Bing, Yahoo! and DuckDuckGo,  
15 correct?

16          **A.** I think there are other companies that serve general  
17 information needs or can, like Facebook, that also have like  
18 a large collection of information that can serve pretty much  
19 any information need, from local information to information  
20 about hobbies to all that -- that kind of information is  
21 available on Facebook. And there's a bunch of that  
22 information that we don't have access to, and there's a bunch  
23 of information on the web that they have access to but may  
24 choose not to.

25          **Q.** We're going to get to some more general information

1 providers in a second, but let me re-ask my question.

2 Companies that offer general search engine services  
3 similar to Google today include Bing, Yahoo! and DuckDuckGo,  
4 correct?

5 A. They do include those, yes.

6 Q. And among the general search engines, Bing's largest  
7 competitor -- let me strike the question.

8 Among general search engines, Google's largest competitor  
9 is Bing today, correct?

10 A. Yes.

11 Q. You believe that Apple has the resources to develop a  
12 competing search engine, correct?

13 A. I assume so. I would not know.

14 Q. Let me re-ask my question. You believe, it's your  
15 belief that Apple has the resources to develop a competing  
16 search engine?

17 A. You would have to ask them.

18 Q. If I could ask you to open your deposition again to  
19 September 24, 2020, and we're going to turn to page 157. So  
20 September 24, 2020, page 157, lines two through four. Let me  
21 know when you're there.

22 A. Yes.

23 Q. On September 24, were you asked the following  
24 question, and did you give the following answer:

25 "Question: Do you think Apple could develop a competing

1 general search engine?"

2 "Answer: They have the resources to do it."

3 Were you asked that question, and did you give that  
4 answer?

5 A. Yes.

6 Q. Thank you, sir. You can close the deposition. While  
7 you were the head of search, Apple was recruiting employees  
8 from Google search, correct?

9 A. Yes.

10 Q. And, in fact, they even -- they recruited your  
11 predecessor Mr. Giannandrea, correct?

12 A. Yes.

13 Q. You believed that Apple was hiring people from Google  
14 search, because Apple was interested in building out its  
15 search-related products, correct?

16 A. I can't be sure what they're recruiting them for, I  
17 didn't have a chance to talk to them after they -- on the  
18 topic after they left, but anything's possible.

19 Q. After Mr. Giannandrea left, I believe you two had  
20 dinner?

21 A. We had dinner, yes. We didn't talk about work,  
22 though.

23 Q. And you're aware that Apple had been recruiting  
24 people from your group at search?

25 A. Yes.

1 Q. And, in fact, I believe the Court has heard testimony  
2 Mr. Pichai even asked to be informed when people were  
3 recruited away from Google search to Apple, correct?

4 A. Perhaps, yes.

5 Q. You answered a question a moment ago about some other  
6 internet providers or sites that provide additional  
7 information of broader resources.

8 Are you familiar with the term SVP, or specialized  
9 vertical providers?

10 A. Actually, I heard it recently. It's not the term  
11 that I normally have used --

12 Q. What's a --

13 A. -- yes.

14 Q. -- term that you would normally use to talk  
15 about these other types of --

16 A. I tend --

17 Q. -- broader information? Sorry.

18 A. I mean, I tend to think of them in terms of the  
19 particular information they provide.

20 Q. Some of those would be Amazon, Facebook and some  
21 others?

22 A. Yeah.

23 Q. Okay. I'd like to ask you some questions about  
24 those. You agree that Google provides broader information  
25 interests than Amazon, correct?

1           A. Than Amazon, yes.

2           Q. And Bing also serves broader information interests  
3 than Amazon, correct?

4           A. Yes.

5           Q. And Google's search engine covers more categories of  
6 information than Amazon's search engine, correct?

7           A. Yes.

8           Q. Amazon almost exclusively is focused on commercial  
9 information, correct?

10          A. Yes. Alexa, their product, is focused on something  
11 much broader than that.

12          Q. A search on Amazon will only return products that are  
13 for sale within the Amazon universe, correct?

14          A. As far as I know.

15          Q. And an Amazon search generally does not provide  
16 information that is not commercial in nature, correct? Let  
17 me give you a better --

18          A. I'm not an expert on Amazon search.

19          Q. Understood. Based on your knowledge and information,  
20 Amazon generally does not provide information that is  
21 responsive to non-commercial queries, correct?

22          A. Again, I'm not an expert on Amazon search, yeah.

23          Q. You can't search for a plumber on Amazon?

24          A. I've never tried.

25          Q. But you could do that on Google?

1           A. Yes.

2           Q. Expedia and Yelp, are you familiar with those?

3           A. Yes.

4           Q. Would you agree Expedia and Yelp are not general  
5 search engines?

6           A. Yes.

7           Q. At times, Google has used a variety of -- I'd like  
8 to -- let me take a step back, as we're changing gears here,  
9 and talk about competitor ratings and rankings, how you  
10 compare Google search against others in the marketplace.

11           Google has used a variety of metrics to track competitors  
12 over time; is that -- do you agree with that?

13           A. Yes.

14           Q. And one of those measures was called IS4. Are you  
15 familiar with --

16           A. Yes.

17           Q. -- IS4?

18           A. Yes.

19           Q. And what is IS4?

20           A. Information satisfaction. It's one of the metrics  
21 we've developed over time.

22           Q. Google uses IS4 ratings to compare itself against its  
23 competitors, correct?

24           A. Where we can compare with competitors. With some  
25 competitors we can't compare with. Like Facebook, we can't

1 compare ourselves directly with. With Siri or with Spotlight  
2 search, we can't compare ourselves directly. But where we  
3 can compare, we use IS4.

4 Q. And we'll come back to that in a second. IS4 ratings  
5 use human raters to compare search results?

6 A. Yes.

7 Q. Human beings are comparing side-by-side -- are doing  
8 side-by-side comparisons of search results, correct?

9 A. Yeah, we actually get a version of the search results  
10 that's stripped down and then show them to raters.

11 Q. IS4 ratings compare Google to competitors across  
12 randomized distribution of queries, correct?

13 A. Yes.

14 Q. And Google uses human raters in the IS4 technique to  
15 compare Google against competitors such as Bing, correct?

16 A. Yes.

17 Q. And you use IS4 and human raters to compare against  
18 competitors like DuckDuckGo, right?

19 A. Yes.

20 Q. And Google does IS4 ratings to compare against  
21 Bing -- I apologize, I said Bing, I'm stepping back for a  
22 second.

23 Google has an ongoing evaluation of Bing as part of its  
24 work, correct?

25 A. We did, yes.

1           Q. Google does not run IS4 rating comparisons against  
2 Amazon, though, correct?

3           A. No.

4           Q. And you do not do IS4 ratings against Facebook,  
5 correct?

6           A. I don't know if we could. We've thought about -- I  
7 think that thought has crossed my mind, but it's not  
8 something that we could do easily.

9           Q. And are you familiar with the term walled gardens?

10          A. Yes.

11          Q. And would you agree that Facebook and Amazon and  
12 others similar are walled gardens that have proprietary  
13 information that is not open to the open web, correct?

14          A. Yes.

15          Q. Let's focus on Bing for a few minutes. You believe  
16 that Google provides better search results than Bing,  
17 correct?

18          A. I -- definitely.

19          Q. And in your time at search, the IS4 rankings between  
20 Google and Bing, Google always had a higher ranking, correct?

21          A. Yes.

22          Q. Now, during your time as head of search at Google,  
23 you agree you made innovations to the Google product in  
24 response to Bing?

25          A. Among many things. A lot of our innovations were

1 driven by looking at -- by looking at an ideal query set  
2 versus what we were doing. So if you want to really get a  
3 result that is much better than what you currently have, you  
4 kind of want to get like -- know what is the ideal result set  
5 for this query, and then see what signals might we be using  
6 in order to get those ideal results. So Bing may be one  
7 source in which we might see queries that inspire us, but we  
8 also got a lot of queries that inspire us from our ratings.

9 Q. And let me just make sure I'm clear. During your  
10 time at search, you agree there were times when Google made  
11 innovations in response to Bing, correct?

12 A. You'd have to be more specific about the innovations.  
13 It was a long time, so --

14 Q. Sure.

15 A. -- I'm trying to remember what in particular you're  
16 referring to.

17 Q. We're going to look at a couple of documents today  
18 that will help answer that question, so we'll pause and come  
19 back to that one.

20 At times, you tried to innovate faster at Google in  
21 response to Bing as well, correct?

22 A. I think we were innovating in general as fast as  
23 possible. We pushed ourselves largely based on the users and  
24 what our metrics were showing us, and where we thought we  
25 could get -- where we had new ideas to push the boundaries.

1           Q. During your time at search, you paid attention to  
2 Bing and used it as a case to try to make Google do better,  
3 correct?

4           A. We did pay attention to Bing, yes.

5           Q. But did you use it as a case to try to make Google  
6 better?

7           A. Like I said, inspiration came from many places. Bing  
8 might have been a source, but a lot of our inspiration  
9 actually came from ideal query sets and observations of where  
10 we could do better, ideas around where we could do better.

11          Q. And I believe --

12          A. A lot of it came --

13          Q. Sorry.

14          A. Sorry. A lot of it came from us also doing queries  
15 where we could see we're not getting the information we  
16 wanted, and those also drove innovations and ideas on our  
17 part.

18          Q. I believe this was a phrase you liked to say a lot:  
19 You believe that search is far from a solved problem,  
20 correct?

21          A. Yes.

22          Q. And you believe that Google can always do better,  
23 correct?

24          A. Yes.

25          Q. Now let's talk about some specific things that you

1 looked at with Bing. Let's talk about features first.

2 While you were the head of search, Bing had some features  
3 that were better than Google, correct?

4 A. You'd have to refresh me on particular features.

5 Q. Certainly. I'm going to hand out some documents.

6 Dr. Gomes, I've handed you a binder of documents, and we're  
7 going to walk through some of those today.

8 A. Yep.

9 Q. They all should be marked on the edge with either a  
10 DX --

11 A. Yeah.

12 Q. -- UPX or some other numbers. I'll try to reference  
13 those today. If you need me to repeat it, please just let me  
14 know. The first one we're going to look at is UPX2045, which  
15 should be in your binder probably towards the back a little  
16 bit; 2045. And first, let's just start with the predicate.

17 Mr. Gomes, does this appear to be an e-mail that you  
18 received in your roles at Google around November of 2015?

19 A. Yes, it looks like it.

20 Q. And it's a lengthy e-mail chain, and we'll walk  
21 through it a little bit.

22 **MR. DAHLQUIST:** Your Honor, this one's not in evidence  
23 yet, so we move for the admission of UPX2045.

24 **MR. SMURZYNSKI:** No objection, Your Honor.

25 **THE COURT:** It will be admitted.

1 (Exhibit UPX2045 admitted into evidence)

2 **BY MR. DAHLQUIST:**

3 Q. I believe the top of the chain is an e-mail that you  
4 received, again on November 4th, 2015. And can you help me  
5 with the name, Mr. Tamar --

6 A. Ms.

7 Q. Ms. Yehoshua?

8 A. Yeah, Tamar.

9 Q. If we could go -- and you can look at the full e-mail  
10 chain, but I'd like to maybe take a step -- go back a couple  
11 pages so we can see how this originates. On the Bates stamp  
12 at the bottom right, it ends in the number 558 -- so it's the  
13 second page, and it's an e-mail on Monday, November 2 from a  
14 Mr. Eric Michel. It's a Lifehacker article, I think, is  
15 what's --

16 A. Oh, okay, it seems to be from a Chris Lee-Egan.

17 Q. That's --

18 A. Oh, Eric Michel, I see what you're saying, yeah.

19 Q. Certainly. I'm going to the very origination of it.

20 A. Yeah, yeah.

21 Q. Someone in Google search found an article and sent it  
22 around to a group?

23 A. No, this was -- I don't think somebody in Google --  
24 well, at Google, but I don't believe this is somebody who was  
25 in Google search. This was a network engineer who would

1 probably be working a data center.

2 Q. And we're going to get to your response in a second,  
3 I just want to see how it starts. The article -- somebody  
4 forwarded an article from Lifehacker, and the title is Search  
5 Engine Showdown: Google vs. Bing.

6 Do you see that heading?

7 A. Yes.

8 Q. And if you go back a couple pages, just for your  
9 reference, all the way almost to the end, page 562, the  
10 conclusion of the article states: "The winner: Google (but  
11 by less than you'd think.)"

12 Do you see that?

13 A. Yes.

14 Q. So now let's flip back, I just wanted to give you  
15 that context. In response to that, back on page 552, there's  
16 an e-mail from Chris Lee-Egan. Who is Chris Lee-Egan?

17 A. I have no idea.

18 Q. Mr. or Ms. Egan says, sort of towards the end of --

19 A. This is 552?

20 Q. I'm back on 558.

21 A. 558, okay.

22 Q. Sorry, we want back to a little bit of the e-mail.  
23 The conclusion of their comment is: "While Bing is still  
24 worse quality wise, Microsoft has closed the gap quite a  
25 bit."

1 Do you see that comment?

2 A. Yes.

3 Q. And in response -- we're getting to you eventually  
4 here, but the one above from Mr. Woolley, do you know who  
5 Mr. Jonathan Woolley is?

6 A. I have no idea. It's a network engineer, somebody  
7 working in the data centers.

8 Q. Okay. So a Google employee said: "This is actually  
9 great news. Having a strong competitor keeps you on your  
10 toes and working hard. If you're the best by a mile, it's  
11 easy to become complacent."

12 Do you see that statement?

13 A. Yes.

14 Q. That was made by a Google employee, correct?

15 A. Yes.

16 Q. Let's go up one more, and here's where it gets to you  
17 on the very first page. We're back on 557 now.

18 A. Yeah.

19 Q. Mr. Lipkovitz or Ms. Lipkovitz sends it to you?

20 A. Mr., yeah.

21 Q. Who is Mr. Lipkovitz?

22 A. He worked in infrastructure at the time.

23 Q. And he states: "I'm sure someone already forwarded  
24 this to you," and he's forwarding it to you, correct?

25 A. Yes.

1 Q. And makes a comment: "FWIW," for what it's worth, "I  
2 do think our video search (universal or mode) is sad."

3 Do you see that statement?

4 A. Yeah.

5 Q. And it continues on: "I know no one cares about it  
6 internally, and you can convince me query volume justifies  
7 this opinion. But I can't imagine we couldn't throw a few  
8 people and make it better."

9 Do you see that comment?

10 A. Yes.

11 Q. Now, let me ask you just a first predicate question.  
12 In the e-mail, you respond and you say: "Back to my work  
13 address." And it looks like you responded from your personal  
14 Gmail account?

15 A. It looks like he sent it to my Gmail account.

16 Q. Did that happen frequently? Did you get e-mails --

17 A. No, it was --

18 Q. -- in your personal account?

19 A. -- an error. If it ever happened, I always pushed it  
20 back to my work account.

21 Q. And so you push it back to your work account, and you  
22 state: "I agree that video universal needs attention.  
23 Pandu" -- that's a reference to Mr. Nayak?

24 A. Yes.

25 Q. Or Dr. Nayak?

1           **A.** Yeah.

2           **Q.** "Dr. Nayak and I chatted about this recently." That  
3 was your response, correct?

4           **A.** Yes.

5           **Q.** Now, do you agree that Google's video search product  
6 at this time had low query volume; is that correct?

7           **A.** Several things are conflated over here. The  
8 universal search is what shows up in the search result page,  
9 and the video tab is, I think, the thing that he's referring  
10 to that has low query volume.

11           **Q.** And this article -- that was one of the things  
12 pointed out in this article, that the video search component  
13 of Bing was better than Google, correct?

14           **A.** That was a person's opinion. And it was worth  
15 looking at, I thought at the time, because you can always  
16 potentially do better. If you see something that's a good  
17 idea, I want to look at it. We generally do our evaluations  
18 not by random people doing random queries, but by having a  
19 large comprehensive set of queries and we're looking at them  
20 systematically. So it is possible somebody finds something  
21 that that process doesn't, but we're constantly looking for  
22 ways to improve independent of an engineer somewhere finding  
23 a particular query that does better.

24           **Q.** And this opinion was held by a Google employee who  
25 said: "I do think our video search is sad."

1           That was an opinion held at Google by a Google employee,  
2 correct?

3           **A.** I mean, Google has a lot of employees, many of whom  
4 are not working on search and may have all kinds of opinions.  
5 We have a systematic process for evaluating this, and by --  
6 and judging how we are doing, and seeing whether we're --  
7 how -- where are the biggest opportunities for improvement.  
8 The other thing is that on individual queries, like I said,  
9 when you make a query -- an improvement, individual queries  
10 can sometimes do worse while the overall set of queries does  
11 better. So there are trade-offs that have to happen as  
12 you're making these improvements, and you're constantly  
13 trying to make those trade-offs in the best way possible.  
14 And Pandu and his team were responsible for making those  
15 trade-offs in the best way possible for the overall user  
16 experience. So there may be trade-offs in bits and pieces  
17 here and there on the boundaries, and so you can easily find  
18 a query on which some other search engine is better than we  
19 are. But we're trying to do the best job for you on the  
20 whole for all your query sets.

21           **Q.** And we're going to come back to queries and talk a  
22 lot more about it in a minute, but I want to stay on features  
23 for right now. After 2015, the dates of these e-mail, Google  
24 built up its video search features in response to Bing,  
25 correct?

1           **A.** Actually, it built up its video search features,  
2 because I felt also that video is becoming a more important  
3 mode in the world as a whole. A chunk of it was actually  
4 from my experience in India. People were not as able to read  
5 and write as easily, and so I felt like people are coming to  
6 video more -- were able to consume video more than they were  
7 able to consume text. And so in order to think -- in  
8 thinking about that problem, I was saying like, well, maybe  
9 there are other things we can do to improve video ranking as  
10 well as improve the ways in which you present videos -- by  
11 breaking them up into chunks; seeing where the key frames  
12 are; understanding what the content of a video is;  
13 transcribing it; and then serving it up in different ways.  
14 Much of this was driven by the fact that video was becoming  
15 an important mode in -- especially in places like India where  
16 we could see people just consuming a ton of video.

17           **Q.** Video became a very important feature, correct?

18           **A.** Video itself is a data content type. The way in  
19 which it was presented could constitute a number of different  
20 features.

21           **Q.** Bringing it back to your statement here on UPX2045,  
22 you state: "I agree that video universal needs attention."  
23 That was your statement, right? In 2015, you agreed that the  
24 video needed attention, correct?

25           **A.** Yeah.

1 Q. You even discussed it with Dr. Nayak, correct?

2 A. Apparently, prior to this mail coming to me.

3 Q. Now my question is very simple: After this e-mail in  
4 2015, did Google take efforts to improve its video search  
5 feature: Yes or no?

6 A. We had been improving our video search feature all  
7 along and -- video search -- we had been improving our  
8 understanding of videos, first, all along, and improving ways  
9 in which we could return videos in the search result page.  
10 And we definitely have put increasing attention on it over a  
11 long period of time. Video has just gradually become more  
12 and more important on the web.

13 Q. So that's yes, you improved your video search --

14 A. We definitely did improve our video search, but  
15 both --

16 Q. Great.

17 A. -- before this and after this. As you can see from  
18 here, I chatted with Pandu about it before this e-mail.

19 Q. Thank you, sir. We're done with that document, we're  
20 going to another one, DX99 in your binder. I'd like to talk  
21 about latency. Latency is another word for speed, correct?

22 A. Sorry, it's UPX --

23 Q. Sure, it's the very front of your binder.

24 A. Okay.

25 Q. First document in your binder, DX99.

1           A. Ah, yeah, sorry. Yeah -- yes.

2           Q. Latency is another word for speed --

3           A. Yes.

4           Q. -- correct? And this document -- let me make sure,  
5 this one is in evidence, Your Honor.

6           And there's some redacted pieces on some documents we'll  
7 look at today. I'll try not to ask you questions about  
8 those. This one, we're just going to stay on the public  
9 pieces of this document.

10          This is a document, friends of low latency, and it says  
11 for Gomes, so this was made for you, correct?

12          A. Yes.

13          Q. By your search team, correct?

14          A. Yes.

15          Q. And the date is May 19th of 2017, correct?

16          A. Yes.

17          Q. In 2017, your team compared Google's latency directly  
18 against Bing. Do you recall that?

19          A. Yes.

20          Q. If we can turn to, I think, page -- the third or  
21 fourth page, Bates 729 that's in bottom right-hand corner.

22          A. Yes.

23          Q. DX99, page four. In this presentation, your team  
24 found in 2017, on the top left, that Bing is faster, and  
25 asked the question why. Do you recall that?

1           **A.** Yes.

2           **Q.** And I think the answer was on the bottom right,  
3 number four. It says: "Bing uses different image loading  
4 techniques." Do you see that?

5           **A.** Yes.

6           **Q.** And on number one, it says: "Google's results arrive  
7 later." Do you see --

8           **A.** Yes.

9           **Q.** -- that as well? So at this time in 2017, Google was  
10 slower than Bing, correct?

11          **A.** For the set of queries you're looking at here, yes.

12          **Q.** Now, you believe that Google's faster than Bing  
13 today, correct?

14          **A.** I'm not involved with search directly today, so I  
15 wouldn't know.

16          **Q.** As of the time you left search in 2020, did you  
17 believe that Google was faster than Bing?

18          **A.** You'd have to ask people who are working on that more  
19 directly. It's been several years now, I don't remember. I  
20 believe we were, but I don't know.

21          **Q.** I'm asking just the time when you left, to the best  
22 of your recollection?

23          **A.** It was -- latency was one factor what I looked at. I  
24 know we were better than Bing overall in our search  
25 experience, so that's what I -- most of what I looked at, the

1 overall picture. To me, latency is a component of the search  
2 results page. And like I was saying, we were making lots of  
3 improvements to search results page. So in many of those  
4 cases, when you bring in, say, videos and other things, and  
5 images and so on, you also want a more interactive search  
6 results page that can result in more JavaScript. You want a  
7 page that you can change easily so that engineers can make  
8 changes much more quickly. That results in more flexible  
9 page, but sometimes it's a bit slower to load. So there are  
10 lots of trade-offs that have to happen in engineering the  
11 search results page, and lots of teams want different things  
12 to happen on the same page. So there are trade-offs there  
13 that have to be made. I was interested -- in the overall  
14 experience, I believe we were significantly better than Bing.

15 Q. Since 2017, Google has undertaken steps to improve  
16 its latency in response to Bing, correct?

17 A. We've had a team working -- we have teams working on  
18 latency since the very earliest days of Google.

19 Q. I believe you made a comment in your direct  
20 examination that sometimes your competitors copied you,  
21 correct, I believe? Do you recall that testimony?

22 A. Yes.

23 Q. And look at this page, sometimes Google copied its  
24 competitors, correct?

25 A. Well, in this context, we were interested in latency

1 regardless. It was one of many factors. In terms of  
2 features we were launching, we were being copied by Bing all  
3 the time. We did look to competitors to see what they were  
4 doing, too.

5 Q. Looking at Bing helped to make Google better,  
6 correct?

7 A. It was one among many things we looked at.

8 Q. If we can go to another document. We're going to go  
9 to UPX731, which should be in your binder, about middle way  
10 through your binder.

11 A. Yeah.

12 Q. UPX731's an e-mail exchange you had in December of  
13 2018 with a Mr. Vince Cerf. Do you see that?

14 A. Yes.

15 Q. And Mr. Cerf is recognized as one of the fathers of  
16 the internet, correct?

17 A. Yes.

18 Q. Mr. Cerf helped to invent the TCP/IP protocols that  
19 make internet possible today, correct?

20 A. Yes.

21 Q. And at the time in 2018, Mr. Cerf was serving, I  
22 think, as Google's -- let me get this title right, chief  
23 internet evangelist, was that --

24 A. Yes.

25 Q. -- the title?

1           A. I believe so.

2           Q. What does that title mean?

3           A. I think at the time we were trying -- the internet  
4 was moving -- I'm not an expert in this area, was moving to  
5 IPv6 I believe, and he was pushing for that transition. But  
6 I'm really not an expert in this area.

7           Q. Nor am I. Mr. Cerf, in his e-mail here sent to you,  
8 about middle of the page, on Sunday, December 16th, 2018, he  
9 performs what I'll call a very specific query.

10           Do you see the query that he's --

11           A. Yeah.

12           Q. It starts with "recently"?

13           A. Yes, I think I've seen this.

14           Q. Now, he ran that same search on Google and he ran it  
15 on Bing. Do you see that?

16           A. Yes.

17           Q. And he says: I ran it on Google and nada," meaning  
18 he didn't get a response?

19           A. Uh-huh.

20           Q. Or not what he was looking for I guess, correct?

21           A. Yes.

22           Q. Now, he said: "So I went and did the same on Bing,  
23 and bullseye." Do you see that statement?

24           A. Yes.

25           Q. So in response to his query, he found it on Bing but

1 couldn't find it on Google, correct?

2       **A.** In this particular case, apparently. That's what he  
3 says.

4       **Q.** Now, Mr. Cerf continues on and says: "This is  
5 consistent with something I've noticed lately, which is that  
6 Google seems to be forgetting a lot of old stuff."

7       Do you see that statement?

8       **A.** Yes.

9       **Q.** Did you agree with him at that time in 2018?

10      **A.** No. This would require a systematic evaluation.

11      **Q.** The very last sentence states: "But what's clear to  
12 me is that Google has real competition in search." Do you  
13 see that statement?

14      **A.** Yes.

15      **Q.** He continued on in his first sentence in the next  
16 paragraph: "I also prefer Bing's image search as well." Do  
17 you see that statement?

18      **A.** Yes.

19      **Q.** Now, you respond the same day, and your response is:  
20 "We do systematic comparisons with Bing, and we are ahead on  
21 our metrics." Do you see that statement?

22      **A.** Yes.

23      **Q.** "However, it is quite possible that our push towards  
24 freshness loses us some relevance."

25      **A.** Yes.

1 Q. Do you see that statement?

2 A. Yes.

3 Q. Was that statement accurate when you wrote it in  
4 2018?

5 A. I don't know, this is -- I said it was a possibility.  
6 Ranking is actually -- there's lots of trade-offs between the  
7 locality of where the result comes from, the freshness of the  
8 result, and a whole host of other signals, right -- the  
9 relevance of the result, the quality of the page. And so  
10 we're making these trade-offs constantly, and our overall  
11 metrics are trying to capture whether overall we're doing  
12 better as a result.

13 Q. You continue on and state: "We will definitely look  
14 into that." After this e-mail, did you look into the  
15 comparison of Google's relevance as compared to Bing?

16 A. I would typically say this to anybody who sent me an  
17 e-mail of this sort, because we want -- I would look at the  
18 query and see if there's anything there. You know, if people  
19 sent me advice on how to improve, I was definitely open to  
20 it.

21 Q. And I believe the last document you looked at you  
22 discounted because it just came from somebody you didn't know  
23 at Google. Do you recall that? You know Mr. Cerf, right?  
24 He knows --

25 A. Yes.

1 Q. -- what he's talking about?

2 A. He's absolutely -- he's not an expert on search at  
3 all. He has never worked on the search team, he's never  
4 worked with the search team in any capacity.

5 Q. He helped to invent the internet, correct?

6 A. Yes. That's a little bit removed from search.

7 Q. Understood.

8 A. We all use the internet.

9 Q. The next statement says -- where you state: "We are  
10 aware of the image search issues and are now working pretty  
11 hard on image search, and you should see a lot of improvement  
12 this year (our investment was lower for a while but is now  
13 much higher.)"

14 Do you see that statement?

15 A. Yes.

16 Q. And after this e-mail -- or around the time of this  
17 e-mail, Google increased its investment in image search,  
18 correct?

19 A. We apparently had been improving our -- increasing  
20 our investment in image search before this.

21 Q. And you were telling Mr. Cerf to keep a look out, and  
22 that Google's image search will get better, maybe in  
23 comparison to Bing's, correct?

24 A. It would just -- it's going to get better, yeah.

25 Q. Now, we just reviewed a few examples from one select

1 time period, 2015 to 2017, when Bing was better than Google  
2 on latency, relevance and some other features, correct?

3 A. It was better than Google -- the claim in that  
4 document is it was better than Google's latency on some  
5 queries, yes.

6 Q. Now, Google undertook efforts after this time -- and  
7 as you said, during this time --

8 A. And before that time.

9 Q. And before that time, Google undertook efforts to  
10 respond to Bing and improve its search products in response  
11 to these few specific examples, at a minimum, right?

12 A. In all of these cases, these are things that we'd  
13 been working on all along. There are cases where you can see  
14 some inspiration perhaps from whatever else might be  
15 happening on the internet. And if people send you particular  
16 examples -- you're getting examples all the time from lots of  
17 people of things that we could improve. These are particular  
18 examples of what we could improve. But much of what we had  
19 done was driven by our metrics and where we could do better  
20 on our metrics. Because you have to take into account all  
21 the different trade-offs you're making in any of these  
22 improvements. You can drop all your features and become much  
23 faster, or you can have more features and serve the  
24 information need better. If you get the right result -- if  
25 you have -- if you can quickly respond with the wrong result,

1 it's not as useful as taking a little bit more time to  
2 respond to the right result. So some of your latency is  
3 going to be caused by the fact that we're doing more  
4 computation to do better ranking. A whole of features can --  
5 things can cause high latency.

6 Q. Sir, during this time period, 2015 to 2017, and  
7 continuing today, you believe that Bing is a weaker  
8 competitor to Google, correct?

9 A. I believe we have a great product and we are the  
10 better search engine.

11 Q. And Google has the highest market share in the search  
12 market, correct?

13 A. You'd have to show me the particulars of how that's  
14 estimated, but I --

15 Q. You believe that Google is the strongest competitor,  
16 as compared to Bing, in the search market, correct?

17 A. We believe we have the best product.

18 Q. If Bing was an even stronger competitor to Google,  
19 then or now, Google would be forced to make additional and  
20 more improvements, correct?

21 A. Like I said, we're driven by the ideal of what the  
22 user could see, and one of the lowest hanging fruit -- one of  
23 the best opportunities and ideas we have to improve towards  
24 that ideal. So that is what gives us more of our inspiration  
25 than anything we do with competitors. Because that ideal

1 tells us this is what a user is really looking for, this is  
2 what we want, and we're moving towards that.

3 Q. Changing topics a bit, we're going to talk about a  
4 little bit about what we hit on before, the idea of queries.  
5 Google does not charge users to use search, correct?

6 A. No.

7 Q. Google makes money through search advertising,  
8 correct?

9 A. Yes.

10 Q. Advertisers can bid higher in a search ad auction to  
11 influence their ranking in a search ad auction; do you agree?

12 A. I'm not an expert on the advertising system at all.

13 Q. In response to any commercial query, Google generally  
14 shows four ads that appear above the organic search results,  
15 correct?

16 A. It shows some range of -- a number of ads.

17 Q. Your team's responsible for the organic --

18 A. Yes.

19 Q. -- not the search ads? At some point, you recall  
20 that Google increased the number of ads that could show from  
21 three to four, correct?

22 A. Yes.

23 Q. And you were part of the decision process of that,  
24 correct?

25 A. I was aware of it, I was not the one who made the

1 decision.

2 Q. Now, in general, Google tries to keep the search side  
3 of the business separate from the ad side of the business,  
4 correct?

5 A. No. What we do is advertisers cannot influence  
6 search ranking. That is the thing that we hold really  
7 strongly. No matter what you spend on advertising, that will  
8 not affect your ranking in search. That is what we mean by  
9 the division between the two sides. But we are both working  
10 on the same page, we're creating one product. So the product  
11 had better look coherent and reasonable to a user.

12 Q. And just so summarize what you said. An advertiser  
13 cannot pay more money in the organic search links to  
14 influence their positioning --

15 A. Yes.

16 Q. -- correct? The same is not true for the ad side,  
17 correct?

18 A. That's the nature of advertising, yes.

19 Q. Now, in general, I believe before you became SVP of  
20 search, you generally were not aware of the revenue numbers  
21 at Google, correct?

22 A. People might have told me at various times. It's not  
23 something I paid close attention to.

24 Q. Revenue was not something you focused on in your work  
25 as an engineer at Google, correct?

1           A. No, it was not part of my job, no.

2           Q. But when you got promoted and elevated, you did hear  
3 and engage in a lot more discussions about revenue at Google,  
4 correct?

5           A. Well, there were -- in general, I became a little bit  
6 more aware of the total revenue of the company.

7           Q. Sir, are you familiar with the term code yellow, as  
8 it's used at Google, correct?

9           A. Yes.

10          Q. And a code yellow declares a situation or an issue  
11 that needs to be addressed with some urgency at Google,  
12 correct?

13          A. Yes.

14          Q. And you've been involved in code yellow projects  
15 during your time at Google search, correct?

16          A. Yes.

17          Q. I'd like to call your attention to one specific code  
18 yellow. Do you recall around February of 2016, a code yellow  
19 was declared because Google was not meeting its revenue  
20 targets for the quarter?

21          A. You'd have to show me the --

22          Q. We can certainly do that. If you can take a look at  
23 UPX2043 in your binder, probably the last quarter of the  
24 binder. UPX2043 is an e-mail chain that you received around  
25 February of 2019, correct?

1           A.    Yeah.

2           **MR. DAHLQUIST:**   And Your Honor, this one is not yet in  
3 evidence, so we'd move UPX2043 into evidence.

4           **MR. SMURZYNSKI:**   No objection.

5           **THE COURT:**    It will be admitted.

6           (Exhibit UPX2043 admitted into evidence)

7 **BY MR. DAHLQUIST:**

8           Q.    This e-mail was forwarded to you, but I'd like to ask  
9 about the first -- it's just a short e-mail, one page.  On  
10 the first page, halfway down, it's an e-mail from Mr. Jerry  
11 Dischler?

12          A.    Yes.

13          Q.    And in 2019, Mr. Dischler is working in the ads  
14 group, correct?

15          A.    Yes.

16          Q.    And he sends it to a number of senior executives  
17 including yourself, correct?

18          A.    Yes.

19          Q.    And he states:  "All, Shiv and I are calling a code  
20 yellow for search revenue starting today."  Do you see that  
21 statement?

22          A.    Yes.

23          Q.    He continues:  "We've seen steady weakness in the  
24 daily numbers, and are likely to end the quarter  
25 significantly behind if we don't turn things around."  Do you

1 see that statement?

2 A. Yes.

3 Q. Now, the reference to weakness and daily numbers,  
4 that's a reference to query numbers, correct?

5 A. I actually don't know what he's referring to here,  
6 whether it's query or revenue or what.

7 Q. And I think the next document gives it some context.  
8 But before we leave this one, Mr. Dischler continues on: "If  
9 we divide up the weaknesses, there are three contributing  
10 factors." Do you see that?

11 A. Yes.

12 Q. "One, search query growth is significantly behind  
13 forecast." Do you see that?

14 A. Yes.

15 Q. So that's a specific reference to search queries,  
16 correct?

17 A. Yes.

18 Q. And Mr. Dischler asks you and Darin -- who is Darin?

19 A. Darin, I believe, at the time was the head of  
20 Chrome -- or the engineering lead on Chrome, I'm not sure  
21 which.

22 Q. So he asks you and Darin to -- I think at the end  
23 here: "Conduct urgent analysis to understand the nature of  
24 the weakness." Do you see that?

25 A. Yes.

1 Q. You were asked to conduct urgent analysis to  
2 understand the nature of the search query weakness, correct?

3 A. Yes.

4 Q. And Google would use search query growth as part of  
5 its revenue targets around this time in 2019, correct?

6 A. I think you'd have to ask the ads team about that, I  
7 was not involved in revenue targets at all.

8 Q. But you're on this e-mail referencing search query  
9 growth as a reason for the weakness, correct?

10 A. Yes.

11 Q. Let's go to the next document that gives a little bit  
12 more context to this, UPX2044. So it's back -- the next  
13 document. UPX2044 is an e-mail chain from February 2019, do  
14 you see that?

15 A. Yes.

16 Q. And was this an e-mail that you received in your role  
17 at Google in February of 2019?

18 A. Yeah.

19 **MR. DAHLQUIST:** And Your Honor, this one is not yet in  
20 evidence, so we hereby move 2044 into evidence.

21 **MR. SMURZYNSKI:** No objection.

22 **THE COURT:** It will be admitted.

23 (Exhibit UPX2044 admitted into evidence)

24 **BY MR. DAHLQUIST:**

25 Q. Now, the title of this e-mail chain that you received

1 in February of 2019 is: Getting Ridiculous. Do you see that  
2 heading?

3 A. Yes.

4 Q. And I'd like to just focus on your e-mail. There's a  
5 longer e-mail chain that you can certainly take a look at,  
6 but it all starts really in reference to this same code  
7 yellow. Do we agree?

8 A. Yes -- well, I don't know about that, but I'm  
9 assuming from --

10 Q. If you need more context, you can certainly go in,  
11 but I'm just going to focus on your e-mail at the top. And  
12 so the very next day, after the Mr. Dischler e-mail that we  
13 just looked at in the prior document, you're on an e-mail  
14 chain entitled: Getting Ridiculous. And you state at the  
15 top that you believe -- I'm sorry, your statement is: "I  
16 tend to agree that we are getting too close to the money."

17 Do you see that statement?

18 A. Yes.

19 Q. Now, you believed that that was search getting too  
20 close to the revenue side of the business, correct?

21 A. This is a really subtle discussion. If you look at  
22 this e-mail thread -- if you'd give me a minute --

23 Q. Sure.

24 A. -- there's a lot of things being discussed here.  
25 Much of this is about how we set our goals for the joint

1 search product. And the question is how do you actually  
2 agree on what's a right target for what we need to do as a  
3 search team. And my -- the discussion here is about whether  
4 queries, in some ways, was the right way to measure the  
5 growth of -- is the right way to measure growth. From my  
6 perspective, queries had always been a tricky way to measure  
7 growth, because there are changes you can make that actually  
8 reduce the number of queries but are good for users. So I  
9 never liked the notion of pure queries as a growth metric,  
10 but we also needed to agree on, like, what was the right  
11 growth metric. And so this was a discussion about exactly  
12 what could be a good metric.

13 Q. And we'll get into that. And it eventually evolved  
14 to a SUN --

15 A. Yeah.

16 Q. -- type of metric? And we'll talk about SUNs in a  
17 few minutes, but let's stay focused here on UPX2044. You  
18 stated in February 2019 that you tend to agree that Google  
19 search was getting too close to the money, correct, that was  
20 your statement?

21 A. Like I said, there's a context of what I meant by  
22 that. This was in the context of people are talking about a  
23 particular OKR metric. There's an OKR being mentioned here  
24 in the course of this e-mail chain.

25 Q. And you continue on stating you believe it's good to

1 aspire to query growth and to aspire to more users, correct?

2 A. Yes.

3 Q. But you think that you are getting too involved with  
4 ads for the good of the product and company, correct?

5 A. That's what I said, yes.

6 Q. And you agreed with that when you wrote it in 2019,  
7 correct?

8 A. This was a moment of some frustration about a  
9 particular setting of an OKR. This was an e-mail written at  
10 6:00 in the morning. The nature of how we set joint goals  
11 had become a little -- it was a little contentious in this  
12 particular case, and so this was written in that context of  
13 exactly how do we set a joint goal with ads. Because we  
14 couldn't agree -- I did not care for queries as a metric by  
15 which we -- that we jointly aspired to.

16 Q. You continued on in your statement: "We need to  
17 think of other issues, like DuckDuckGo and the privacy  
18 challenge, in our innovation narrative." Do you see that  
19 statement?

20 A. Yes.

21 Q. Rather than focusing on query growth, you wanted to  
22 focus on issues like privacy and innovation, correct?

23 A. Both things matter. This was not about -- it was not  
24 about innovation, we're always innovating, this is our  
25 innovation narrative. At this point, DuckDuckGo, I believe,

1 was advertising extremely heavily against us. They were  
2 using a huge amount of marketing, and I was seeing their ads  
3 everywhere. And so some of this was referring to the fact  
4 that I believed that marketing was a huge challenge to us,  
5 and we needed to spend some time on that.

6 Q. Your next statement isn't about marketing, though, it  
7 states: "We need to retain users for the long run." Do you  
8 see that statement?

9 A. Yes.

10 Q. And you agree, this was the divide that you had:  
11 Your goal of search was to retain users for the long run, and  
12 you were concerned that the ads group was in it for the short  
13 run, correct?

14 A. I think this metric of just using just queries is not  
15 one that optimizes appropriately. So this was a discussion  
16 about the metric. Ads also wants users for the long run,  
17 they also want long term business. We are aligned in this,  
18 there's no difference in what our incentives are.

19 Q. You end your e-mail here -- I'm sorry, I didn't mean  
20 to cut you off. You end your e-mail here by stating: "I am  
21 getting concerned that growth is all we are thinking about."  
22 Correct, that was your statement?

23 A. Yes.

24 Q. While you were the head of search, you did not agree  
25 with spending more time thinking about short-term

1 improvements rather than long-term improvements, correct?

2 A. I don't think at any point in search were we thinking  
3 primarily about short-term improvements or I think -- and the  
4 ads team, too, I think has a long-term point of view from my  
5 understanding.

6 Q. You're not involved in the search ads team, correct?

7 A. No.

8 Q. So I'm just asking from your perspective. Your goal,  
9 as head of search, was to always focus on the long-term  
10 improvements rather than short-term improvements, correct?

11 A. On the long-term health of search, yes.

12 Q. Now, this debate that you're having here on  
13 UPX2044 -- or let me -- that was a mischaracterization. Let  
14 me take a step back.

15 The e-mail that you wrote in UPX2044 focusing on the  
16 question of query growth, Google seeks to grow queries  
17 because it means more users to Google, correct?

18 A. We're serving more people. We have a product that we  
19 think is really good. We'd like more people to use it and  
20 for more purposes.

21 Q. More queries means more ads on Google search,  
22 correct?

23 A. It depends on the type of queries and so on, yeah.

24 Q. And more ads translates into more money for Google,  
25 correct?

1           A. I assume so.

2           Q. Do you agree, sir, that more queries means more  
3 revenue for Google, correct?

4           A. The ad system is a complicated system. I assume so.

5           Q. But more than just an assumption, you know that from  
6 your work at Google, more queries means more revenue for  
7 Google, correct?

8           A. Sure.

9           Q. Continuing with this chain, let's look at PSX204.  
10 It's in your binder as well. PSX204 is an e-mail between you  
11 and others at Google from March of 2019. Do you see that?

12          A. It's the other binder?

13          Q. No, I'm sorry, the same binder. We're still in our  
14 document binder. The document is PSX, it's the second  
15 document in the binder.

16          A. Okay, yeah, got it.

17          Q. Did you find it now?

18          A. Yes.

19          Q. PSX204 is an e-mail to you and from you in March of  
20 2019 in your role at Google, correct?

21          A. Yes.

22          **MR. DAHLQUIST:** Your Honor, this document is not yet in  
23 evidence, so we hereby move PSX204 into evidence.

24          **MR. SMURZYNSKI:** No objection.

25          **THE COURT:** It will be admitted.

1 (Exhibit PSX204 admitted into evidence)

2 **BY MR. DAHLQUIST:**

3 Q. This is an e-mail chain -- I'm going to come back to  
4 your e-mail in a second, but I'd like to take one step back.  
5 If you can look at the bottom of the second page, top of the  
6 third page ending in 073 into 074. This is still connected  
7 to the code yellow that was announced. And right at the top  
8 of 074, the very first line states: "Week seven marks the  
9 end of our code yellow. We met both our exit criteria as of  
10 today."

11 Do you see that statement?

12 A. Yes.

13 Q. So this is the culmination of this code yellow  
14 sequence, correct?

15 A. Yeah, that's that thread, yes, that part of the  
16 thread.

17 Q. And that means that Google met its quarterly  
18 financial goals for this session, correct?

19 A. Again, this is from the folks from the ads team.

20 Q. So let's take us back to one page, to 073. And I'd  
21 like to look at an e-mail from your colleague, Dr. Raghavan.

22 A. Yes.

23 Q. Which is about a third of the way down the page. So  
24 Dr. Raghavan e-mails you and says: "Let's talk about this  
25 Monday, please," correct?

1           A. Yes.

2           Q. And he states: "The current revenue CY" -- what does  
3 CY stand for?

4           A. I assume code yellow in this context.

5           Q. "The current revenue was addressed by heroic RPM  
6 engineering." And RPM engineering is revenue per thousand,  
7 correct?

8           A. I assume so.

9           Q. It's a sales ad term, correct?

10          A. Yeah.

11          Q. So let me read it again: "The current revenue CY was  
12 addressed by heroic RPM engineering, but the core query  
13 softness continues without mitigation." Do you see that  
14 statement?

15          A. Yes.

16          Q. He continues: "At this rate, the full year plan is a  
17 bad miss and will need drastic steps on the query side." Do  
18 you see that statement?

19          A. Yes.

20          Q. Dr. Raghavan e-mailed that directly to you, correct?

21          A. Yes.

22          Q. Now let's go to your response, the first page of  
23 PSX204, at the very top 72. Now, you were annoyed by this  
24 e-mail, correct?

25          A. Yes.

1 Q. And you were the head of search at this time,  
2 correct?

3 A. Yes.

4 Q. And you were not in favor of using queries as a  
5 metric for measuring for the performance of search, correct?

6 A. Yes.

7 Q. And you state here at the top -- now, you send this  
8 e-mail -- it's a draft, you were thinking of sending  
9 something in response, correct?

10 A. Yes.

11 Q. And you send it to Mr. Nick Fox. Who is Mr. Fox?

12 A. He was the head of product at search.

13 Q. And you sent it to another gentleman?

14 A. Shashi, and he was leading a large -- he, along with  
15 Pandu, led a large chunk of our search product engineering  
16 work.

17 Q. And you state: "Hey, here's what I want to send  
18 to" -- that's Mr. Nayak, "prior to the meeting," correct?

19 A. No, to Mr. Raghavan you mean.

20 Q. I'm sorry, Mr. Raghavan. I apologize. This is what  
21 you wanted to send to Mr. Raghavan prior to the meeting,  
22 correct?

23 A. Yes.

24 Q. And you state: "I have to admit that I'm feeling  
25 annoyed, both personally and on behalf of the team," correct?

1           A. Yes.

2           Q. Let's go down to the first -- second tick mark that  
3 starts: "Most headcount." Do you see that?

4           A. Yes.

5           Q. "Most headcount (non-assistant for search) has gone  
6 into projects that are growth oriented." Do you see that?

7           A. Yes.

8           Q. "To the point where I worry that we are really not  
9 investing in research or speculation adequately." Do you see  
10 that statement?

11          A. Yes.

12          Q. By speculation, you mean big ideas, correct?

13          A. Well, random speculation. I mean, this e-mail was  
14 sent in a moment of annoyance. But I was trying to make the  
15 case to -- I think the way I interpreted this is Prabhakar  
16 was saying you all have not done enough. And my response was  
17 like, no, we're doing a lot. So this was said in that  
18 context. Most of our ranking teams and so on are working on  
19 ideas that we don't know whether they're going to work or  
20 not, so this is an overstatement of that fact. But we were  
21 putting a significant effort into ideas that we thought would  
22 increase the amount -- satisfy more user needs and increase  
23 the amount of usage we had in search. Those two things are  
24 not necessarily at odds, right.

25          Q. But you believe there are many ways in which you can

1 improvement search quality, but actually resulting in fewer  
2 queries, correct?

3 A. Yes.

4 Q. And your statement there, that most of the headcount  
5 went into projects that are growth oriented, there you're  
6 referencing projects that are oriented on growing queries,  
7 correct?

8 A. On serving more information needs and thereby growing  
9 queries. We have no way of growing queries directly unless  
10 we do a better job with search.

11 Q. Well, let's -- I don't know about that. Let's talk  
12 about that. Go down in your same e-mail here, the last full  
13 paragraph. You state: "We could increase queries quite  
14 easily in the short term in user-negative ways." Do you see  
15 that?

16 A. Yes.

17 Q. So you wrote this e-mail, correct?

18 A. Okay, there's no way I would consider ever doing  
19 those things.

20 Q. But you're telling -- you're stating --

21 A. Sure, sure.

22 Q. -- in this e-mail that --

23 **THE COURT:** Hang on, hang on. Let's not talk over one  
24 another, please.

25 **BY MR. DAHLQUIST:**

1           Q. Let me restate my question. You agree that Google  
2 could increase queries quite easily in the short term in  
3 user-negative ways, if it wanted to, correct?

4           A. I was proposing things that we would never do, like  
5 turning off spell correction. I could never imagine us doing  
6 that.

7           Q. Well, the next line you state: "If we, as a company,  
8 want to go there, we should discuss that." Correct, that's  
9 your statement?

10          A. As I said, this was a moment of annoyance in this  
11 conversation.

12          Q. Let's go to the last line in the same paragraph. You  
13 state: "The easy ways are almost all bad." Do you see that  
14 statement?

15          A. Yes.

16          Q. You continue: "Having queries as a metric will, in  
17 my opinion, have a subtly bad effect as a launch metric, even  
18 if we 'decide not to do the bad things.'" Do you see that  
19 statement?

20          A. Yes.

21          Q. And you made that statement in --

22          A. Yes.

23          Q. -- 2019, correct? Now, this e-mail was in March of  
24 2019, correct?

25          A. Yes.

1 Q. You left your role as head of search less than a year  
2 later in 2020 --

3 A. Yes.

4 Q. -- correct?

5 A. A little bit more than a year later, yeah.

6 Q. And this was a draft e-mail to Dr. Raghavan, correct?

7 A. Yes.

8 Q. Dr. Raghavan took over the role as head of search  
9 when you left, correct?

10 A. Yes.

11 Q. And he's continuing to run search today, correct?

12 A. Yes.

13 Q. Now, earlier you talked about -- thank you, we can  
14 take that document down.

15 Earlier you talked about a discussion of moving from  
16 queries as a measurement to -- I believe the term is SUN,  
17 S-U-N, correct?

18 A. Yes, yes.

19 **THE COURT:** Mr. Dahlquist, let me interrupt you. It's  
20 almost 3:00 o'clock, so why don't we go ahead and take our  
21 afternoon break, and we'll pick up again at 3:15.

22 Thank you, everyone. See you shortly.

23 (Recess taken at 2:57 p.m.)

24 (Back on the record at 3:16 p.m.)

25 **BY MR. DAHLQUIST:**

1 Q. Dr. Gomes, I was told we're both talking too fast, so  
2 I'm going to --

3 A. I was told the same thing.

4 Q. -- try to slow down. Right before the break,  
5 Dr. Gomes, we were talking about the metric that was being  
6 used to measure performance on the search side and on the ad  
7 side around 2019, correct?

8 A. Yes.

9 Q. And we were looking at a document, PSX204, where  
10 Dr. Raghavan had made a comment to you that honestly annoyed  
11 you. Do you recall that? And you drafted a response back to  
12 him in advance of a meeting that you all had, correct?

13 A. Yes.

14 Q. Did you ultimately send the document in PSX204 to  
15 Dr. Raghavan?

16 A. I don't believe I did.

17 Q. But you spoke about it in a meeting that came  
18 subsequently?

19 A. I don't actually know what we spoke about. Some of  
20 this was sort of like getting my annoyance off my chest.

21 Q. But in PSX204, Dr. Raghavan's e-mail to you stated  
22 that he believed the search team needed to take drastic steps  
23 on the query side, correct?

24 A. Yes.

25 Q. And after that, there was a meeting at some point

1 where you expressed your difference of opinion with him as to  
2 using queries as a metric, correct?

3 A. I don't know if it happened in a meeting with him or  
4 whether there was some other process by which we came to  
5 that. But we came to an understanding of what the right  
6 metric was to use in order to make sure -- we both wanted the  
7 product to grow, and what is a metric that captures growth  
8 while not -- and is always positive for users. So we came up  
9 with the metric of SUNs, as you mentioned, semantic user  
10 needs.

11 Q. SUN, S-U-N, stands for semantic user need, correct?

12 A. Yes, yes.

13 Q. And this was thought of as a metric to use rather  
14 than using queries, visits or DAU, which is daily average  
15 user, correct?

16 A. Daily active user.

17 Q. I'm sorry, daily what?

18 A. Active user.

19 Q. Active user, thank you. And a SUN -- and this is, I  
20 believe -- this is right, but you can correct me. A SUN is a  
21 group or a series of semantically similar queries that are  
22 grouped into a single visit, correct?

23 A. Yeah, what we're trying to get at is are we serving  
24 more different types of user needs. And so an individual  
25 query doesn't get at that, because two queries -- if you do

1 more queries, maybe we're not serving that user need as well.  
2 And if they're just there for the day, they might be just  
3 doing one user need. So if we launch more things and do --  
4 improve in certain various ways, we're hopefully serving more  
5 of their user needs and they're coming to us for a variety of  
6 user needs. And so the semantic user needs should go up even  
7 if queries go down.

8 Q. A SUN has a relationship to the number of queries,  
9 though, correct?

10 A. It is a clustering of queries.

11 Q. For example, if I search for costume and then I  
12 search for Halloween costume and then I leave, that would be  
13 two queries but one SUN, correct?

14 A. Yeah, depending on how the system works. But, yes,  
15 that's the idea.

16 Q. And some SUNs can only have a single query. If I  
17 type Halloween costume and get what I need, that's one SUN  
18 and one query, correct?

19 A. Yes.

20 Q. And if I type D.C. restaurant, that could be a second  
21 query and a second SUN, correct?

22 A. It could be.

23 Q. The SUN is proxy metric that Google uses to measure a  
24 search user experience, correct?

25 A. Yes -- I think calling it a search user experience

1 is -- it's not quite measuring search user experience. It's  
2 measuring how useful we are for serving a variety of user  
3 needs.

4 Q. And do you agree that 78 percent of Google's revenue  
5 is covered by SUNs with one or two queries?

6 A. I wouldn't know.

7 Q. Is there something that I could show you that would  
8 refresh your recollection?

9 A. Sure.

10 Q. Your Honor, if I may approach.

11 Sir, I've handed you a document marked UPX2075.

12 A. Yeah.

13 Q. And we're not going to put this up on the screen,  
14 this didn't go through the confidentiality process, Your  
15 Honor. I'm just trying to refresh recollection here. If you  
16 can turn to the -- a couple pages in, 1197.

17 You see the heading is: Most of our Revenue, do you see  
18 that?

19 A. Yes.

20 Q. So let me just -- if you'd take a look at that, and  
21 then let me re-ask the question -- or let me ask two  
22 questions.

23 Do you agree that most of Google's revenue is covered by  
24 one to two query SUNs?

25 A. I have no idea who created this presentation and to

1 whom it was given. I don't believe it was given to me.

2 Q. Do you agree this is a Google presentation?

3 A. It certainly looks like one, yes.

4 MR. DAHLQUIST: Your Honor, we move to admit UPX2075 as a  
5 party admission.

6 MR. SMURZYNSKI: Your Honor, I have no objection to the  
7 admission of the document. I'm not sure it's a party  
8 admission, but we don't object to the document.

9 THE COURT: Okay. I agree with that, so we'll admit it  
10 as a business record, UPX2075.

11 (Exhibit UPX2075 admitted into evidence)

12 BY MR. DAHLQUIST:

13 Q. Thank you, Your Honor. We can move on from that  
14 document.

15 A. I actually have no memory of this.

16 Q. Dr. Gomes, moving to a different topic. You're  
17 familiar with the idea or the concept of choice screens?

18 A. Yes.

19 Q. And a choice screen is where a user can select  
20 different a default engine -- search engine, correct?

21 A. Yes.

22 Q. And you're aware that in some parts of the world,  
23 users are given a choice as to who they want as their general  
24 search engine on their phones or desktop, correct?

25 A. Yes.

1 Q. And while you were the head of search, you were  
2 involved with the implementation of a choice screen in the  
3 European Union, correct?

4 A. It happened in my team, yes.

5 Q. And if we could take a look at a document, UPX749.

6 A. Actually, that may not have happened in my team. It  
7 happened at Google, but I'm not sure if it happened in my  
8 team or not.

9 Q. You were involved in the process?

10 A. I was aware of it.

11 Q. UPX749 is a document -- an e-mail chain, it's an  
12 e-mail and then an attachment?

13 A. Yeah.

14 Q. And the e-mail is to you around July of 2019, you and  
15 many other senior executives at Google, correct?

16 A. Yes.

17 Q. And the title of this e-mail is: Go Big in Europe.  
18 Do you see that?

19 A. Yes.

20 Q. And that was the title given to the process of when  
21 the EU choice screen was being rolled out and Google's  
22 strategy around it, correct?

23 A. This was a deck presented by a person working on a  
24 response to that choice screen.

25 Q. I'd like to look at the first page of UPX749, Bates

1 stamp 081. The first bullet point, do you see that, under  
2 AIs -- AIs is action items, do you agree?

3 A. Sorry, one second. This is in the deck or in the --

4 Q. In the e-mail --

5 A. In the e-mail, sorry.

6 Q. We'll start in the e-mail.

7 A. Yeah, yeah.

8 Q. So first page, UPX749, Bates stamp 081, the first  
9 bullet point is: "Breakdown year by year of expected revenue  
10 loss (EU choice screen, Android device activation timeline,  
11 and potential revenue gain from product investments post  
12 marketing.)"

13 Do you see that sentence?

14 A. Yes.

15 Q. Now, as a result of the EU choice screen, Google  
16 modeled a year-by-year breakdown of expected revenue loss,  
17 correct?

18 A. According to this, yes, yes.

19 Q. And the revenue loss was expected as a result of the  
20 choice screen, correct?

21 A. We didn't know really what would happen. This was  
22 trying to figure out what might happen.

23 Q. And it also was a result of new Android devices being  
24 activated with a choice screen, correct?

25 A. As it -- that's what it says here.

1           Q. The second sentence states: "Model wider range in  
2 revenue loss based on current market share," arrow, "survey  
3 choice." Do you see that statement?

4           A. Yes.

5           Q. "Google also modeled a wider range in revenue loss  
6 based on its market share at the time," correct?

7           A. That's what it says, yes.

8           Q. "Google believed that giving EU consumers a choice  
9 with a choice screen would cause it to lose market share,"  
10 correct?

11          A. Well, we actually didn't know what would happen, and  
12 it -- and this was just sort of modeling possibilities.

13          Q. At the time it modeled -- let me strike the question.  
14 The statement there has two names, Bornheim and  
15 Friedenson. Do you see these two names on the first bullet  
16 point?

17          A. Yes.

18          Q. Do you know if either of those two individuals are  
19 lawyers?

20          A. I would not remember at this point.

21          Q. Okay. Let's turn to the first page of the deck,  
22 UPX749 at 5275 titled: Go Big in Europe?

23          A. Yeah.

24          Q. And you were at the meeting where this was presented,  
25 correct?

1           **A.** Possibly. I have no reason to believe one way or the  
2 other.

3           **Q.** Let's go to the second page, which is the executive  
4 summary.

5           **A.** Yeah.

6           **Q.** And it's at UPX749 at 5276. Under the executive  
7 summary, the first text states: "Choice screen revenue at  
8 risk." Do you see that statement?

9           **A.** Yes.

10          **Q.** Now, it says: "Details privileged sanitized from  
11 this deck." Do you see that?

12          **A.** Yes.

13          **Q.** Do you recall that the revenue -- well, let me strike  
14 that.

15           Do you know why the revenue details were declared as  
16 privileged in this deck?

17          **A.** I think you'd have to ask a lawyer.

18          **Q.** Do you have revenue discussions at Google in your  
19 time?

20          **A.** I mean, revenue is definitely mentioned at times.

21          **Q.** Was it always a privileged discussion, based on your  
22 knowledge?

23          **A.** Frequently, we were not part of revenue discussions  
24 because it was -- I was working in search and I was not part  
25 of those discussions.

1 Q. The next bullet states: "To address we plan:" Do  
2 you see that?

3 A. Yes.

4 Q. And the first, I think it's table, states: "Brand  
5 affinity marketing campaigns," right?

6 A. Yes.

7 Q. Now, in response to the EU choice screen, Google  
8 intended to launch new marketing campaigns, correct?

9 A. Yes.

10 Q. The goal was to make more people aware of the quality  
11 of Google's search product, right?

12 A. Yes.

13 Q. The second bullet point states: "Efforts to drive  
14 DAU uplift." Daily active user was the DAU that we just  
15 referenced a minute ago, correct?

16 A. Yes.

17 Q. The first bullet says: "Improve search experience in  
18 two local markets, France and Germany." Do you see that?

19 A. Yes.

20 Q. It continues, "New best-in-class or exclusive  
21 experiences, e.g., in-game and immediate post-game soccer  
22 video highlights."

23 A. Yes.

24 Q. So in response to the EU choice screen, Google  
25 intended to improve the search experience to a best-in-class;

1 is that correct?

2           **A.** Yes -- well, I don't know what best-in-class means in  
3 this context. We launch things principally -- first of all,  
4 typically in the U.S. in English, because that's where a bulk  
5 of the engineering team resides. And then many of these  
6 experiences are then taken to Europe and other countries. On  
7 occasion, we have to do specialized things in particular  
8 countries because they have different sports, like there's a  
9 German league or a French league. And so it may take us a  
10 bit longer to get the features we want into those markets.  
11 So this was speeding up something that would likely have  
12 happened anyhow, but speeding it up in this context -- which  
13 it is a prioritization call.

14           **Q.** The efforts reflected on this page, the executive  
15 summary states that these are efforts in response to the  
16 revenue risk as a result of the EU choice screen, correct?

17           **A.** I mean, they're talking -- things are being conflated  
18 here. In general, you want to make sure that when users are  
19 using search, they're aware that Google search is the best  
20 experience. In the context of this choice screen, one of the  
21 thoughts would be that there would be a lot more marketing  
22 and advertising happening around search, and we needed to be  
23 prepared for that and be launching new things that are  
24 visible that we could use in marketing campaigns. Our search  
25 quality, we're always trying to have to be the best

1 regardless. But some of these things like soccer and so on  
2 may be more appealing in a marketing context against other  
3 people marketing things at us, which we expected might  
4 happen.

5 Q. The second bullet point states that Google intended,  
6 in response to the EU choice screen, to focus on showcasing  
7 local content. Do you see that?

8 A. Yes.

9 Q. And at the very bottom, it has in the summary the  
10 2019 P&L impact. Do you see that?

11 A. Yes.

12 Q. Google intended to invest additional FTEs around  
13 their score of \$3,000,000 in 2019, and then in 2020 invest 52  
14 FTEs from 179 to 296,000,000. Do you see that statement?

15 A. Yes.

16 Q. Do you agree that in response to the EU choice  
17 screen, that these were Google's plans to invest more money,  
18 correct?

19 A. Yes, but this is a relatively -- in the context of a  
20 team with thousands of engineers, this was a relatively small  
21 delta. But it was in the context of making sure that we had  
22 good marketing, should there be marketing against us.

23 Q. The EU choice screen made Google think about what it  
24 might be missing in these countries, and what Google could do  
25 better, correct?

1           **A.** We were thinking of all these things regardless. It  
2 prioritized -- it caused us to prioritize countries a little  
3 bit differently. We typically would try and do things across  
4 all of Europe, and try and find a common way to do it. In  
5 this case, we might try and go faster in France and Germany  
6 and find some local providers of data. There are lots of  
7 trade-offs we have to make in order to launch these things  
8 internationally. We operate in a lot of different countries,  
9 and this was prioritizing France and Germany perhaps a bit  
10 ahead of some other countries.

11           **Q.** You agree that the EU choice screen made Google think  
12 about what it might be missing in these countries, and what  
13 Google could do better, correct?

14           **A.** We were thinking of what we might be missing anyhow  
15 all the time. This was figuring out how we could speed up  
16 the process of launching it.

17           **Q.** Sir, if you could look in your binder at the  
18 deposition in front of you.

19           **A.** Yeah.

20           **Q.** We're going to look at December 10th this time,  
21 December 10th, 2021, pages 212 through 213, lines 17 to line  
22 two on the next page. So December 10th, page 212. Let me  
23 know when you're there.

24           Are you there, sir?

25           **A.** Yes.

1 Q. Great. On December 10th, 2021, were you asked the  
2 following question, and did you give the following answer:

3 "Question: Do you agree that the impetus for those  
4 product changes was the implementation of the European choice  
5 screen?"

6 "Answer: I think this made people think about those  
7 countries in a slightly different light and say 'well, is  
8 there some way, some other things that we could be doing that  
9 we may be missing?' But we are doing a lot across these  
10 countries, so there is -- there's -- this is looking for  
11 anything we might be missing. We're always looking to see  
12 how we could do better."

13 Were you asked that question, and did you give that  
14 answer?

15 A. Yes.

16 Q. Thank you, sir. Sir, you believe that Google has the  
17 highest search quality in Europe today, correct?

18 A. Yes.

19 Q. And at the time of this presentation in 2019, you  
20 believed that Google had the highest search quality, correct?

21 A. Yes.

22 Q. It also --

23 A. Well, Europe is -- in all the different countries in  
24 Europe, yes.

25 Q. And I guess we're focused on the EU, for purposes of

1 the EU choice screen, correct?

2 A. The EU countries, yes.

3 Q. And you believe that Google has the highest market  
4 share of all search engines in Europe, correct?

5 A. It depends on how that's defined, but sure.

6 Q. Despite being the highest quality today, and as of  
7 2019, Google was concerned about losing users as a result of  
8 the EU choice screen, correct?

9 A. We thought there might be significant marketing  
10 presentations against us, and we wanted to make sure that  
11 users remembered what search engine they were using and the  
12 quality that was associated with Google.

13 Q. And it was not until the EU choice screen that Google  
14 decided to make the investments identified in UPX749, the Go  
15 Big in Europe, correct?

16 A. We were making investments in Europe all the time.  
17 This was on the margin as a couple of extra investments,  
18 yeah. The European market is extremely important to us, and  
19 so we invest in all those countries in a very big way.

20 Q. New topic, sir. Your counsel showed you a document,  
21 DX2035 --

22 A. Yeah?

23 Q. -- handed to you as a one-page handout, a new way to  
24 search some content for your apps. Do you still have that  
25 handout?

1           A. Yes -- somewhere here, yes.

2           Q. And he asked you some questions about -- this was a  
3 new product that was launched in 2016, and then I think  
4 unlaunched in 2019 was the --

5           A. Yeah.

6           Q. -- testimony, correct? Sir, have you heard of a  
7 company called Branch?

8           A. No.

9           Q. You're not aware that Branch developed a technology  
10 that could search apps on a user's phone?

11          A. No.

12          Q. While you were the head of search, you worked on --  
13 did you work on this product in DX2035?

14          A. I mean, it was in my -- depending on the dates, it  
15 would have -- no, in 2016, it would not -- possibly not have  
16 been in my reporting chain.

17          Q. So this is not a product that you had personal  
18 knowledge of at the time?

19          A. I had personal -- I had knowledge of it, but it was  
20 not in my reporting chain.

21          Q. Not in your reporting chain?

22          A. Yeah.

23          Q. Did you ever use this product?

24          A. I think I've used it on my phone at the time, but  
25 it's been a while, some years ago.

1           Q. I believe you stated that this didn't get a lot of  
2 usage at the time, correct?

3           A. By 2019, when we unlaunched it, we were not seeing  
4 much usage of it.

5           Q. I believe the Court asked you a question as to how  
6 would the search run, and I think you said --

7           A. Yeah, yeah.

8           Q. -- it was in the Google search widget, correct?

9           A. Yeah.

10          Q. To find the results, do you know if you had to click  
11 on a totally different tab in order to find the results that  
12 would be produced by this search?

13          A. I believe it was in the autocomplete. These were  
14 results in some cases being shown even in autocomplete.  
15 That's what I remember seeing at some point.

16          Q. And the product referenced in DX2035, it only  
17 searched Google proprietary apps, correct?

18          A. This says it's actually searching more than that,  
19 it's searching -- it said it was searching --

20          Q. Look at the bottom of --

21          A. It will be able to search LG's pre-installed apps.

22          Q. Right. So let's look at the bottom of page two -- I  
23 think is what you're looking at, which is where I wanted to  
24 go. At the bottom of page two, it states: "Today, this  
25 experience works with apps like Gmail, Spotify and YouTube."

1 Do you see that statement?

2 A. Yes.

3 Q. And so at the time it was launched, it only worked  
4 with proprietary apps -- as well as I guess Spotify?

5 A. Spotify is not our app.

6 Q. That's right, I'm just -- that's what I want to make  
7 sure. So at the time it was launched, it worked with  
8 proprietary apps like Gmail and YouTube as well as Spotify,  
9 correct?

10 A. Yeah.

11 Q. He then states: "In the coming months, we will also  
12 be adding more apps, including Facebook Messenger, LinkedIn,  
13 Evernote, Glide," and then a few others. Do you see that?

14 A. Yes.

15 Q. Do you know, were those additional apps ever added?

16 A. I wouldn't remember at this point.

17 Q. Do you recall at the time that 2035 was del launched  
18 how many apps it was searching?

19 A. No, I would not remember.

20 Q. Do you recall if it was only about a dozen?

21 A. I have -- I would not remember.

22 Q. Do you have any knowledge how many apps Branch could  
23 search?

24 A. Like I said, I don't know about Branch.

25 Q. I believe you testified in your deposition -- let me

1 strike that.

2 While you were head of search, Google developed a tool to  
3 help search mobile applications. Do you recall that?

4 A. Yes.

5 Q. Was that this in DX2035 or something different?

6 A. There were many different approaches we had to trying  
7 to search mobile apps, none of which really worked very --  
8 none of which were -- seemed to have a lot of usage.

9 Q. I believe you said that Google made various attempts  
10 at building a tool that could search mobile apps, but it was  
11 very difficult, correct?

12 A. I don't -- I mean, there were -- the thing is from  
13 what I remember of the unlaunch of this, it was just not  
14 getting any usage. Whatever we had tried was just not  
15 getting much usage. There didn't seem to be user interest in  
16 it.

17 Q. Separate and apart from the product in 2035, were you  
18 aware in part of other products that would search apps?

19 A. They were not in my world as another team working on  
20 that, so I would not remember completely.

21 **MR. DAHLQUIST:** Your Honor, if I may have a minute.

22 (Brief interruption)

23 **MR. DAHLQUIST:** Your Honor, no further questions.

24 **THE COURT:** Okay. Mr. Cavanaugh.

25 **MR. CAVANAUGH:** No questions, Your Honor.

1           **THE COURT:** Any redirect?

2           **MR. SMURZYNSKI:** Your Honor, we have no redirect.

3           **THE COURT:** Okay, terrific.

4           **MR. SMURZYNSKI:** Thank you, Mr. Gomes.

5           **MR. DAHLQUIST:** Thank you, Dr. Gomes, for your time.

6           **THE COURT:** Dr. Gomes, thank you very much for your time  
7 and testimony, sir.

8           **THE WITNESS:** Thank you.

9           **THE COURT:** Safe travels home.

10           I know Mr. Schmidtlein is anxious to get home and get  
11 changed into his elf costume and go trick or treating.

12           **MR. SCHMIDTLEIN:** This is my permanent costume I'm  
13 afraid, Your Honor.

14           **THE COURT:** Antitrust lawyer, scariest costume around.

15           **MR. SCHMIDTLEIN:** Exactly, exactly. Your Honor, we are  
16 sort of concluded for today. We had hoped to have some  
17 deposition video for a couple of witnesses. Through some  
18 technical -- we're still conferring with them on a couple of  
19 issues, but that's on us. We will have -- Ms. Elizabeth Reid  
20 will testify first thing tomorrow. And then we will have our  
21 video issues straightened out, and we will expect --  
22 depending on the time of when Ms. Reid concludes, we will  
23 present testimony from Eric Christensen from Motorola, and if  
24 necessary, if we still have time, Mitchell Baker from  
25 Mozilla.

1           We have also been working with their counsel in an effort  
2 to try to come to agreement that all of the video testimony  
3 that we and our colleagues are counter-designating may be  
4 shown in public. And we're -- I think we're close to getting  
5 all of that resolved, but there may be a couple of loose ends  
6 there where their counsel may want to come in and try to  
7 lodge some objections, not to the playing, but to whether it  
8 should be played in public. So we have alerted them, and  
9 we've asked them to be present tomorrow so that we can  
10 resolve those efficiently.

11           **THE COURT:** Maybe I'm confused, Mr Schmidtlein. So are  
12 the video depositions of Mr. Christie and --

13           **MR. SCHMIDTLEIN:** Christensen.

14           **THE COURT:** Christensen, and --

15           **MR. SCHMIDTLEIN:** And Ms. Baker.

16           **THE COURT:** Ms. Baker, okay. So those are the video  
17 depositions you're seeking to play?

18           **MR. SCHMIDTLEIN:** Yes, Your Honor.

19           **THE COURT:** I see, okay.

20           **MR. SCHMIDTLEIN:** And those would come after Ms. Reid's  
21 live testimony tomorrow. And then we will have Dr. Israel,  
22 one of Google's experts on market definition issues, will be  
23 here on Thursday. And we expect he will take all day  
24 Thursday, and probably spill into Friday.

25           **THE COURT:** Okay. And Ms. Reid is? Is she a Google

1 employee?

2 **MR. SCHMIDTLEIN:** Oh, I'm sorry, yes, she is a Google  
3 executive.

4 **THE COURT:** And any expectation of a request for a closed  
5 session with her tomorrow?

6 **MR. SCHMIDTLEIN:** Not in connection with the direct.

7 **THE COURT:** Okay, terrific.

8 **MR. DAHLQUIST:** We don't know yet, but we do not  
9 anticipate anything on the cross.

10 **THE COURT:** So we'll just, consistent with our  
11 practice -- and I appreciate it, we'll just post something  
12 about Mr. Christiansen and Mr. Baker's potential video  
13 testimony -- Ms. Baker, I'm sorry.

14 **MR. SCHMIDTLEIN:** As I said, I will be in a position to  
15 report to you first thing tomorrow as to whether there are  
16 any open issues. And if there are, what I would propose to  
17 do is to hand the transcript portions that are under  
18 discussion -- or have been objected to so that you'll have  
19 those during the day. And if you want to hear argument in  
20 between or you want to take a look at those over the lunch  
21 break, you'll be able to do that.

22 **THE COURT:** Okay, very good. Anything else?

23 Mr. Dintzer.

24 **MR. DINTZER:** Yes, Your Honor. Two weeks ago when we  
25 raised the issue of getting a fuller understanding of

1 Google's order in witnesses, the Court asked Google to fill  
2 out the rest of their proposed calls so that the Court could  
3 plan its schedule -- and of course we would also appreciate  
4 that so we could plan for the witnesses. We have gotten some  
5 information, but we have not gotten the rest of it filled  
6 out. Everything's in their hands now. We don't see any  
7 reason why they can't just -- I mean, I know they want to  
8 surprise us all, it is Halloween. But everybody else --  
9 right now they have three -- six fact witnesses not  
10 identified for the ones that they've told the Court, and  
11 three experts --

12 **THE COURT:** I'm sorry, what do you mean, six fact  
13 witnesses --

14 **MR. DINTZER:** Six fact witnesses reside on their witness  
15 list -- they've told us that some are not coming. They have  
16 six fact witnesses residing on their witness list, and three  
17 experts residing on their witness list for after this week.  
18 They have told us that they don't expect to go past the 14th.  
19 But other than that, at this point, Your Honor, for  
20 everybody's planning, if they told us all who they're going  
21 to call and when, we could all plan and this could be a lot  
22 more orderly for us.

23 So the Court did ask, and we've been nudging them and  
24 they gave us a little. But we would ask the Court to ask  
25 them to just give it to us all this evening so we can just

1 finish our planning. Presumably they have it at this point.

2 **THE COURT:** Okay. Mr. Schmidtlein, where are we on  
3 remaining witnesses?

4 **MR. SCHMIDTLEIN:** We were -- consistent with the order,  
5 we are evaluating every witness. We are going to probably  
6 pull some more witnesses off, and we were going to get that  
7 to them tomorrow which is the day that we are due to get them  
8 to them. And to be clear, we did tell them of several  
9 witnesses who we were not going to be calling in light of how  
10 things are progressing.

11 **THE COURT:** So tomorrow, do you expect that you will --

12 **MR. SCHMIDTLEIN:** We will provide them with next week and  
13 the following week.

14 **THE COURT:** Okay. So that at least --

15 **MR. SCHMIDTLEIN:** That's it, the end of our case.

16 **THE COURT:** So you'll have those names tomorrow.

17 **MR. DINTZER:** Thanks, Your Honor.

18 **THE COURT:** All right. So I think that's helpful to  
19 know, it keeps us on track to finish either the week of the  
20 13th or maybe a little bit after.

21 Mr. Cavanaugh, did you want to add anything?

22 **MR. CAVANAUGH:** No, nothing further, Your Honor.

23 **THE COURT:** Anything else we need to discuss?

24 **MR. DINTZER:** Not from the DOJ plaintiffs, Your Honor.

25 **MR. SCHMIDTLEIN:** No, Your Honor.
