TRANSCRIPT OF BENCH TRIAL, DAY 34  
BEFORE THE HONORABLE AMIT P. MEHTA  
UNITED STATES DISTRICT JUDGE

APPEARANCES:

For DOJ Plaintiffs: KENNETH DINTZER, ESQ.  
United States Department of Justice  
1100 L Street Northwest  
Washington, D.C. 20005  
  
SARA GRAY, ESQ.  
United States Department of Justice  
450 Fifth Street Northwest  
Washington, D.C. 20001  
  
For Plaintiff State of Colorado:  
JONATHAN SALLET, ESQ.  
Colorado Department of Law  
Consumer Protection Section  
Antitrust Unit  
1300 Broadway  
Seventh Floor  
Denver, Colorado 80203

-- continued --

## 1 APPEARANCES (CONTINUED):

2 For Plaintiffs State of  
3 Colorado and State of  
4 Nebraska:

5 WILLIAM F. CAVANAUGH, JR., ESQ.  
6 Patterson Belknap Webb & Tyler LLP  
7 1133 Avenue of the Americas  
8 Suite 2200  
9 New York, New York 10036

10 For the Defendant:

11 JOHN SCHMIDTLEIN, ESQ.  
12 Williams & Connolly LLP  
13 680 Maine Avenue Southwest  
14 Washington, D.C. 20024

15 MICHAEL SOMMER, ESQ.  
16 Wilson Sonsini Goodrich & Rosati  
17 1301 Avenue of the Americas  
18 40th Floor  
19 New York, New York 10019

20 Official Court Reporter:

TESTIMONY

MARK ISRAEL Cross-Examination..... 8661

EXHIBITS RECEIVED

DXD29 and DX3243..... 8660  
PSX0562..... 8732

## P R O C E E D I N G S

(Call to order of the court.)

COURTROOM DEPUTY: Good morning, Your Honor. This is Civil Action 20-3010, United States of America, et al., versus Google LLC.

Kenneth Dintzer for the DOJ. Jonathan Sallet and William Cavanaugh for Plaintiff States. John Schmidlein on behalf of Google.

THE COURT: All right. Good morning, everyone. Anything we need to discuss before we get started?

MR. SOMMER: Not a discussion, Your Honor. I neglected yesterday to offer DXD29, which was the deck I used with Dr. Israel. And I'm also re-offering DX3243, which was the chart that DOJ said they wanted to look at yet again. I don't know if there's an objection. If there is, he can be heard on it.

MR. DINTZER: We have no objection to the deck coming in as a demonstrative, which has been the normal course for these things in the trial.

The proposed exhibit, it wasn't disclosed to us exactly under the rules, but we won't oppose it for it to come in now.

MR. SOMMER: The exhibit was disclosed, I don't know, two months ago. I don't know what the issue is there. But since they're not opposing it, I won't --

MR. CAVANAUGH: Your Honor, we don't have any

1 objection to it, but it's the same for the Baker slides. There  
2 were a number of slides used in the deck for Professor Baker  
3 that we want offered under 106. They're currently reviewing  
4 them. So long as it works both ways, we don't have a problem  
5 with that.

6 MR. SCHMIDTLEIN: I think we have raised some issues  
7 with your team on the Baker exhibits, and I think our teams are  
8 conferring back and forth still on those.

9 THE COURT: All right. You will let me know if  
10 there's an issue to be resolved. Otherwise, we will just wait  
11 to hear from you on that issue.

12 (Exhibits DXD29 and DX3243 received into evidence.)

13 MR. SCHMIDTLEIN: One last point, Your Honor. You had  
14 asked me yesterday about scheduling for Monday.

15 THE COURT: Right.

16 MR. SCHMIDTLEIN: The first witness that we were  
17 otherwise planning to call on Monday does have a timing issue,  
18 but I would expect and hope that we would -- Dr. Israel will be  
19 done in the morning on Monday, and if that's the case and we  
20 call our witness after lunch, given the anticipated length of  
21 direct, we expect that she should be concluded by the end of the  
22 day Monday, and then our second witness doesn't have a timing  
23 issue in terms of being able to come on Tuesday.

24 THE COURT: Great. Okay. Let's just see where we are  
25 at the end of the day, and hopefully, that schedule holds.

1 Mr. Dintzer, ready when you are.

2 MR. DINTZER: Thank you, Your Honor.

3 MARK ISRAEL, WITNESS FOR THE DEFENDANT, RESUMED STAND

4 CROSS-EXAMINATION (Continued)

5 BY MR. DINTZER:

6 Q. Do you still have your binder there?

7 A. Yes.

8 Q. Okay. Good.

9 So we were talking about verticals yesterday, and you said  
10 that there are ordinary course aggregations of queries, like  
11 verticals.

12 Do you remember that testimony?

13 A. Yes.

14 Q. Okay. And one of the verticals -- it's not one that you  
15 showed to the Court, but one of the verticals I believe you  
16 identify in your report is the health vertical; is that right?

17 A. I don't think we talked about that yesterday. That may be  
18 a vertical in the report.

19 Q. You don't recall?

20 A. I don't recall which all that I listed and where. I'd want  
21 to look.

22 Q. Okay. You do understand that there's a health vertical?

23 A. I think people define a health vertical, yes.

24 Q. Okay. And that a query regarding cancer would be in the  
25 health vertical; right?

1 A. That sounds reasonable.

2 Q. And a query regarding a child's fever would be in the  
3 health vertical; right?

4 A. Yeah, I mean, there's -- it depends on the nature of these  
5 queries, but that sounds reasonable.

6 Q. Okay. And a query regarding cancer and one regarding a  
7 child's fever are separate searches by your definition and,  
8 therefore, may be resolved by different sets of competitors;  
9 right?

10 A. That's possible.

11 Q. A query regarding cancer and one regarding a child's fever  
12 aren't in the same vertical but still may be resolved by  
13 different sets of competitors, under your analysis?

14 A. I mean, there could be different competitors. Again, to be  
15 clear, I think aggregation where the competitors are similar is  
16 reasonable. So the purpose is just to identify competition.

17 So I would be unlikely to quibble about one competitor on  
18 the edge. The purpose is to make sure we're not missing  
19 competition.

20 Q. I understand, sir. But you move back and forth between  
21 your -- between talking about queries and verticals; you move  
22 back and forth between queries and verticals.

23 I just want to understand, you have not gone query by query  
24 and said this query belongs in this vertical, this query  
25 belongs -- that's an analysis you haven't done on any

1 significant set of queries; is that true?

2 A. Well, I have definitely grouped queries into verticals  
3 throughout the report.

4 Q. But you're not answering my question.

5 My question is, you haven't gone and said, well, this query  
6 goes to this vertical and this query goes to this.

7 You haven't done it on a query-by-query basis?

8 A. Yeah, that's not true.

9 Q. Okay. Show me the list of queries that you've done and  
10 where you've assigned each of the queries to a vertical.

11 A. For example, I showed the Court an analysis of queries in  
12 the shopping vertical and queries in the local vertical and  
13 counted the number of queries that went into different entities  
14 in those verticals.

15 Q. Yes. You did it in groups?

16 A. But that's by assigning queries. Otherwise, I wouldn't be  
17 able to count up the number of queries.

18 Q. That's exactly my point. Thank you.

19 If you actually did a query-by-query analysis, given that  
20 Google gets a billion queries every day, it would be, you will  
21 agree with me, impossible to figure out where each of those  
22 queries goes; right?

23 A. And that's what I'm saying I did for the queries for the  
24 week.

25 Q. You went through a Bing (indiscernible)?

1 COURT REPORTER: You went through what?

2 MR. DINTZER: A Bing app.

3 THE WITNESS: I took all the queries from that weekly  
4 sample and assigned them in the verticals.

5 BY MR. DINTZER:

6 Q. Yes, but you didn't look at each -- sir, you didn't look at  
7 each query; right?

8 A. I don't know what you mean by that. The queries were all  
9 in the data, and every query was assigned to a vertical.

10 Q. Did you personally sit down and look and read each query?  
11 You make me ask the question because you keep fuzzing it.

12 MR. SOMMER: Objection, Your Honor.

13 BY MR. DINTZER:

14 Q. Answer the question I'm asking, sir.

15 MR. SOMMER: We just don't need the --

16 MR. DINTZER: That's fair, Your Honor. I withdraw.

17 BY MR. DINTZER:

18 Q. Did you sit down and read each query and figure out which  
19 vertical each query individually goes into?

20 A. I did not personally read each one. Automated tools, with  
21 the definitions given in the report, assigned every query.

22 Q. Okay. And that automated definition, where did you get the  
23 automated definition in the report to assign the queries to  
24 different verticals?

25 A. For the most part, it came from Google's ordinary course

1 assignment. I also used some economic judgment in terms of  
2 shopping queries and so on, as I said to the Court, I think, to  
3 look at ones that returned PLAs.

4 Q. Right. So you took Google's ordinary course division of  
5 queries, and then you -- you changed them so that they fit the  
6 way that you think that they should be; right?

7 A. I adapted shopping, for example, to look for PLAs. You  
8 could use the ordinary course definitions of Google and get very  
9 similar results.

10 Q. But you didn't. You used a modified version of Google.

11 A. For shopping in particular, I tried to focus on where PLAs  
12 have been, because that's been a focus for shopping queries.

13 Q. Now, in your -- I'm sorry.

14 In your report, you did not offer any opinion as to how the  
15 queries might be aggregated, the precise, correct aggregation;  
16 right?

17 A. I think what I said is, I don't -- I don't take enough  
18 stand that there has to be one precise aggregation. They can be  
19 aggregated into things like verticals that reveal competition.

20 I mean, my point is, you have to look at the demand side  
21 and how people are searching, and you should do some aggregation  
22 that lets you get to a reasonable set of queries so that you can  
23 see what the competition is.

24 Q. Right. But in your report, you took the position that you  
25 did not formulate precise, correct aggregation of queries; is

1 that correct?

2 A. I don't think that's what I said. I think I said I'm not  
3 taking a stand that the ones that I did have to be the market  
4 definition. You could do it slightly differently and get to a  
5 reasonable market definition that way.

6 Q. Okay. So let's go to your deposition, and we're going to  
7 go to page 86 of your deposition. We're going to hand it up.

8 May we approach, Your Honor?

9 Page 86, sir. Let me know when you're there.

10 A. I see that.

11 Q. Okay. And the question you were asked on page 86 and the  
12 answer you gave was:

13 "Question: Have you done the work to figure out what  
14 aggregation is appropriate for the -- to take us out of the  
15 query-by-query analysis of product definition?

16 "Answer: I have not offered an opinion on the precise,  
17 correct aggregation."

18 You were asked that question and gave that answer; right,  
19 sir?

20 A. I did. And right below that, you asked me again, and I  
21 clarify. "I don't offer an opinion on whether this is or is not  
22 the correct market, but I certainly offer it as one way you  
23 might think about aggregating things."

24 Q. You answered my question -- the part I read back, sir, that  
25 was the correct reading of that; that correct?

1 A. Yeah, you read it correctly.

2 Q. Okay. And so you don't offer an opinion whether the  
3 verticals are the correct market; is that correct?

4 A. I think verticals are a reasonable way to group the market.  
5 My opinion is that you could group them in somewhat different  
6 ways and still arrive at what matters to me, which is that SVPs  
7 compete.

8 Q. Okay. But my question is, you don't offer an opinion  
9 whether the verticals are the correct market; am I right?

10 A. I'm not saying that the way I grouped them is the way that  
11 you have to do it. There are different ways you could group  
12 them and reach the same conclusion.

13 Q. So it's not -- the verticals are not the correct market?  
14 You're not offering that opinion?

15 I need a yes or a no, sir.

16 A. I think the verticals, as I've said, are a reasonable way  
17 to do it. I'm not saying they're the only way to do it.

18 Q. Okay. I see you're reading your deposition while we're  
19 talking. So you're probably already at the spot where I was  
20 going to read, sir.

21 You were asked this question and you gave this answer on  
22 page 87:

23 "Question: Okay. Other than the query-by-query analysis  
24 for search, what product market, what method of considering the  
25 product market that Google compete -- participates in for search

1 do you offer?

2 "Answer: I think that's different from your last question.  
3 You asked me if I considered any way to analyze it, and I offer  
4 analysis of verticals as an ordinary course way that would give  
5 us one form of aggregation. I don't offer an opinion on whether  
6 that is or is not the correct market. But I certainly offer it  
7 as one way you might think about aggregating things."

8 You were asked that question and you gave that answer; is  
9 that right, sir?

10 A. Yes.

11 Q. Okay. You can close your deposition.

12 And you will agree that even verticals combine queries that  
13 have different competitive conditions?

14 A. Yes. It's an issue when you analyze markets. There's  
15 always going to be some difference in competition. The key is  
16 that we get the reasonable aggregation so that we can reasonably  
17 figure out who the competition is.

18 Q. Okay. And let's go to your slides, sir.

19 Do you have those handy?

20 A. Yes.

21 Q. I'm going to go to slide 16. Just let me know when you're  
22 there.

23 A. It's up on the screen, so yeah.

24 Q. I'm going to try to keep it up -- do these on the screen,  
25 too, to make it easier for you.

1           The third bullet here, it says, "This approach naturally  
2 leads to verticals as a grouping, shopping queries likely to  
3 have similar options to each other but very different options  
4 from travel or banking queries."

5           Do you see that?

6           A.    I do.

7           Q.    Okay.  And then if you turn to the next page, these are  
8 some of the verticals that you put; is that right?

9           A.    Yes.

10          Q.    And the jobs and education, that's one of the verticals you  
11 list; right?

12          A.    Yes.

13          Q.    And do you know what GreatSchools in the jobs and education  
14 vertical, what they do?

15          A.    I don't know that one in particular.  I know some other  
16 schools ones that probably have information on schools, but I'm  
17 not familiar with that one in particular.

18          Q.    So you group something in a vertical without actually  
19 knowing what they do?

20          A.    I mean, these were groupings based on the methodology  
21 described in the report.

22          Q.    Okay.  But answer my question.  You put things in these  
23 verticals and -- when you don't know what they do; right?

24          A.    I'm not personally familiar with that website.  I know what  
25 they do based on the methodology in the report, which is --

1 Q. Okay.

2 A. -- what searches return these terms.

3 Q. Who put these slides together, sir?

4 A. I did.

5 Q. Who decided to put "GreatSchools" in that one?

6 A. I mean, it's in that vertical as defined in the report. So  
7 I put it in there. I just haven't personally been to that web  
8 page.

9 Q. Who put it in the report? If you don't know it, I'm asking  
10 you, who put it in the report?

11 A. I did, based on the methodology described in the report  
12 that grouped these based on what comes out of Google.

13 Q. Okay. And you will agree that "jobs and education," just  
14 the title of that vertical, those are very different things? If  
15 I'm looking for a job, I may not be looking for an education. I  
16 may have finished my education. Right?

17 A. I agree they are different.

18 Q. Okay. But you put them in one vertical?

19 A. I did. Some aggregation has to happen. Right? If we were  
20 debating about is it "jobs," is it "jobs and education," and  
21 that's how you had grouped it, I don't think I would have much  
22 of a quibble.

23 My point is, by aggregating everything, you miss  
24 competition.

25 Q. Okay. And so I'm just looking at the way that you did it,

1 sir. It's your slide.

2 And so you would agree that a query on "great schools,"  
3 whatever that does, and LinkedIn probably are not in the same  
4 competitive market? They're not looking for the same thing;  
5 right?

6 A. They may be different competitive options.

7 Q. And if I'm looking for a book on -- let's turn to your  
8 shopping one. This is the one that you defined yourself. You  
9 didn't take Google's vertical; right?

10 A. I think all of these would be in Google's -- the  
11 competitors in the shopping -- no, the competitors in the  
12 shopping query would be defined based on the Google method that  
13 I described. Which particular queries I analyzed had this  
14 additional component of looking for whether they had PLAs.

15 Q. Okay. And so if I'm looking for the book "Good Night  
16 Moon," I might look on Amazon because I can have it shipped to  
17 me; right?

18 A. Yes.

19 Q. Okay. But if I'm looking for Good Night Moon, I'm not  
20 going to go to Home Depot. That probably wouldn't be a good  
21 choice.

22 A. That's probably correct.

23 Q. This is another example where you're grouping queries that  
24 aren't necessarily addressable by everybody in the same  
25 vertical; right?

1 A. I agree, there are going to be differences, but by doing it  
2 this way, we get a nice list of competitors.

3 Q. We do get a list, sir, but the competitive conditions are  
4 not the same for every query in each of these verticals; right?

5 A. So I agree they're not exactly the same, and that's why  
6 when you group things, you have to group them in reasonable ways  
7 to get you to reasonable definitions of competition.

8 Q. Now, we start -- sort of where we ended yesterday, we were  
9 talking about browsers and how none of them default to SVP.

10 Do you remember that conversation, sir?

11 A. I sure do, yes.

12 Q. And there's been testimony in the case about that; right?

13 A. Yes.

14 Q. Okay. And all the testimony in the case -- and we're  
15 putting it up here. This is UPXD059. All the testimony in the  
16 case is that everybody wants the default in a browser to be a  
17 general search engine; right?

18 A. I'm not sure what "everybody" means. I mean, I agree that  
19 there's been testimony that browsers are looking for a default  
20 GSE, but there's -- I mean, there's nuance to what purpose and  
21 then who you're including in "everybody."

22 Q. Okay. That's fair. Why don't we include John Giannandrea.  
23 He was asked the question:

24 "Question: And users, when they put something in the URL  
25 bar of Safari, they have an expectation that it's going to go to

1 a general search engine?

2 "Answer: Yes."

3 He gave that testimony; right?

4 A. He did. He gave a lot of testimony about how a lot of what  
5 is typed in is actually served in other ways. But he did  
6 indicate that -- the answer to this question you have here.

7 Q. Okay. And Mitchell Baker, she gave the testimony:

8 "Question: For the Firefox default search engine, is  
9 Mozilla looking for a general search engine that responds to all  
10 different types of user queries?

11 "Answer: That is -- yes, that is what we have done.

12 "Question: A vertical provider that focuses on one  
13 category of content would not be appropriate as the default  
14 search engine for the Firefox browser; right?

15 "Answer: I think that's right."

16 So she agreed that general search engines are the only pick  
17 for browsers; right?

18 A. She agreed here that they are what they're looking for as  
19 the default.

20 Q. Okay.

21 A. So they are seeking out a default GSE.

22 Q. Have you seen any testimony -- because you asked me what do  
23 I mean by "everybody." Have you seen any testimony in this  
24 trial where somebody testified that it would be a good idea to  
25 put something other than a general search engine in a browser's

1 default?

2 A. Again, I think a lot of the Giannandrea testimony speaks to  
3 that, in the sense that I read his testimony to say Apple wants  
4 to provide the best answers they can in the default searches,  
5 like Spotlight or Siri. And in a lot of cases, they use sources  
6 far beyond GSEs.

7 Q. Okay. So you're saying that they send Safari queries to  
8 places other than Google in the search box? Is that your  
9 testimony?

10 A. I mean, his testimony will speak for itself, but my  
11 recollection and my read of it was he said that Apple intercepts  
12 a lot of queries, and when they do, they're seeking information  
13 from a wide variety of sources beyond just GSEs.

14 Q. Now, GSEs define themselves as answering all queries;  
15 right?

16 A. That sounds right in general.

17 Q. Browsers want GSEs in the default positions because they  
18 want a search engine that can handle all sorts of queries?

19 A. I think that's consistent with what I talked about  
20 yesterday. GSEs is kind of the Swiss army knife to the browser.

21 Q. There's a cost to the user for a null response or a useless  
22 response from a search engine?

23 A. I think I agree with that generally, yeah.

24 Q. Users don't like to get useless or null response.

25 We can agree on that; right?

1 A. I think users like to get the best response they can to  
2 their query. That's what they're seeking when they decide where  
3 to go.

4 Q. So if they go to a search engine and they put in a query  
5 and they get a null response or a useless response, that's  
6 something that's not helpful for them. They don't like that.  
7 Right?

8 A. I agree with that.

9 Q. Okay. And part of Google's brand is their ability to  
10 answer responses and not give a null or useless response; right?

11 A. I think Google is building a reputation of being able to  
12 answer, you know, all queries. Other SVPs are building a  
13 reputation of being better than Google on certain types of  
14 queries.

15 Q. Now, you mentioned TikTok. TikTok does not provide -- do  
16 you know what a SERP is?

17 A. Yes.

18 Q. What's a SERP?

19 A. It's a search engine response page.

20 Q. Okay. TikTok does not provide a SERP in response to a  
21 query; right?

22 A. I think as we usually define a SERP, that would be correct.  
23 They answer in a different form.

24 Q. If you're a user and you want SERPs, then TikTok doesn't  
25 provide that; right?

1 A. If I want the way -- I don't think most users know what a  
2 SERP is. But if I want the thing that we call a SERP, if I  
3 really like that, then TikTok wouldn't provide that.

4 Q. Okay. So let's make sure we're all on the same SERP page.

5 A SERP has those blue links or some links; right? Can we  
6 agree on that?

7 A. That sounds right.

8 Q. Okay. And it may have an answer, it may have other kinds  
9 of information, but it has it in a written form so that a user  
10 can look at it and examine the different possible results;  
11 right?

12 A. Yeah. Generally, it's going to have some text, maybe some  
13 pictures, but it's going to have a page that returns some  
14 results, at least some of which are links, some of which may be  
15 information boxes.

16 Q. Okay. And it may have links to YouTube or something? It  
17 may have some video; is that right?

18 A. It could.

19 Q. Okay.

20 A. It could have video on the page in some cases.

21 Q. If I put -- so if I wanted an auto parts store near me and  
22 I put that into a general search engine, the SERP shows the  
23 answers in milliseconds, right, hopefully in milliseconds, about  
24 auto parts stores and the like; right?

25 A. In general, yes.

1 Q. Okay. If I put that same query, "auto parts store near me"  
2 into TikTok, do you have any idea what I would get?

3 A. I don't know for that query what I would get from TikTok.

4 Q. Okay. But whatever I got, I would have to watch a video;  
5 right?

6 A. Yeah, I honestly don't know. TikTok is mostly about  
7 videos. So it may have links, too. TikTok is not one I use a  
8 lot. I would advance Yelp as the obvious alternative in that  
9 case.

10 Q. Okay. But you talked about TikTok. So TikTok does not  
11 offer a SERP with listed answers. It offers -- to any query.  
12 It offers video, where if you want to find out if you've even  
13 got a useful answer, you have to watch video; right?

14 A. Again, I'm not positive everything is video. It's mostly a  
15 video source. I don't think I talked much about TikTok as a  
16 search competitor, although I understand from my kids that they  
17 use it that way.

18 Q. Now, there are many, many Google documents in this case, a  
19 lot entered into evidence, where Google compares itself to Bing  
20 for a variety of reasons; right?

21 A. Yeah, I agree with that. There's lots of documents where  
22 Google compares itself to many different companies.

23 Q. Okay. But my question --

24 A. Certainly Bing is one.

25 Q. And Google and Bing return relevant results in response to

1 a broader range of queries than does Amazon; right?

2 A. That sounds correct.

3 Q. Google's interior analysis of who its competitors are is  
4 useful in identifying its competitors; right? There's some  
5 value into looking at who Google thinks it competes with on the  
6 search side. All these questions are on the search side. We're  
7 going to get to ads.

8 On the search side, Google's analysis is useful in figuring  
9 out who its search competitors are?

10 A. Broadly speaking. I mean, as long as you look at all of it  
11 and you interpret -- you know, you understand the context, but  
12 broadly speaking, as long as we look at the universe of it, it's  
13 useful.

14 Q. Okay. And so we're going to go to -- we're going to try  
15 not to over-binder you, but we have a lot of information.

16 A. I've never had that verb before, but I may use it myself.

17 Q. We're going to hand up a binder of exhibits.

18 May I approach, Your Honor.

19 If you go to 7001 in the binder, and we're going to put  
20 this on the screen, too.

21 A. 7001.

22 THE COURT: It's the last tab.

23 THE WITNESS: The last tab?

24 THE COURT: Yeah.

25 THE WITNESS: Thank you.

1 BY MR. DINTZER:

2 Q. Have you seen this document, sir?

3 A. I've seen documents like this.

4 Q. Okay. This is a summary exhibit that the plaintiffs have  
5 entered in showing -- it accumulates information from a variety  
6 of exhibits that occurred in Google over a number of years. And  
7 this was Google's measure of its share of clicks for years. And  
8 you're welcome to look through it.

9 My question is, for years, Google evaluated its search  
10 share when comparing itself to Bing and Yahoo!; is that right?

11 A. Yeah, I think -- I testified for a long time Google has had  
12 reports like this where it -- one of the reports it does is  
13 click shares of the GSEs.

14 Q. Right. And in these -- in all of the ones listed here,  
15 almost -- I think there might be one or two where it compares  
16 itself to Ask or one of the others, but it almost uniformly just  
17 compares itself to Bing and Yahoo!; is that right?

18 A. Yeah, in these tables, the comparison is to Bing and  
19 Yahoo!.

20 Q. And they add up to about 100 percent. So in these tables,  
21 when comparing itself to Bing and Yahoo!, Google is only  
22 comparing itself to Bing and Yahoo! regarding search click  
23 shares; right?

24 A. These tables, even in the notes, say these are shares of  
25 GSEs. There are lots of other documents that say lots of other

1 things, but these documents are computing shares among GSEs.

2 Q. There are lots of other documents that do say a lot of  
3 other things. But in your search analysis to the Court, you  
4 didn't cite any of them; right?

5 A. There certainly -- you asked me this yesterday, and I was  
6 thinking about it. There certainly are other documents cited in  
7 the slides about ways Google is investing and so on. I think  
8 the slides themselves didn't spend a lot of time on documents.

9 Q. Okay. And I think that's a way of saying yes, I'm right,  
10 that you did not cite any of those documents?

11 A. I mean, I think you're referring to documents that I'm  
12 talking about that refer to competition with Amazon or Yelp or  
13 others. Those are certainly in the report. I think you're  
14 right that I focused on data for those topics in the slides.

15 Q. Okay. So let's go to UPX472, which is in evidence, Your  
16 Honor.

17 And this is just one of the components of the 7001 document  
18 that we were just looking at. And this is where in November  
19 2010, they're circulating their search numbers.

20 If you look at the CUP data, which is the first set of  
21 date, where they have Google, Bing, and Yahoo!.

22 Do you see that?

23 A. I do.

24 Q. Okay. And again, it adds up to 100 percent. And we asked  
25 Dr. Varian about this, and UPXD062, we can see his testimony.

1 He testified that they could have included Amazon or Facebook.  
2 Okay?

3 "Question: And if Google had wanted to and asked the CUP  
4 people to do it, they could have added Amazon and Facebook and  
5 whoever else?

6 "Answer: Right.

7 "Question: And they never did. None of the Penny Chu  
8 reports have search shares for Facebook or Amazon. Right?

9 "Answer: In this survey, they never -- yes, they never did  
10 that for this survey."

11 So Google could have said, well, how about these other  
12 people, and they chose not to compare themselves in these  
13 reports to anyone other than general search engines; right?

14 A. For his answer, this is the survey they did. I agree with  
15 that.

16 Q. Okay. And as we said at the beginning of when I started,  
17 this is some information that has to be considered in figuring  
18 out the search market; right? What Google actually did in  
19 real-time is relevant; right?

20 A. When I -- I think my earlier answer is what I would say.  
21 The full set of Google's competitive documents is relevant.

22 Q. Okay.

23 A. I don't think slicing them into documents on one topic or  
24 another is particularly relevant without looking at the full set  
25 of documents.

1 Q. Okay. Have you looked at the full set of documents?

2 A. It's a large record, but I've tried to review lots of  
3 documents that I've cited.

4 Q. Okay. So let's go -- now, from at least 2017 through 2019,  
5 Google calculated quarterly general search market shares.

6 Are you aware of that?

7 A. Yeah, I didn't recall they were quarterly, but that sounds  
8 plausible.

9 Q. But you knew that they were calculating these search market  
10 shares; right?

11 A. I knew they had been calculating these sorts of shares.

12 Q. Let's go to UPX0475.

13 Your Honor, this is in evidence, and parts of this are  
14 redacted.

15 So let's go to 744, sir. It's in your binder. We're not  
16 going to say the numbers.

17 A. Sorry. Which one am I looking at?

18 Q. Bates 744.

19 A. But within tab 475?

20 Q. Yes, sir.

21 If you would look at the top heading -- and we're not going  
22 to say the numbers because we don't have to -- you will see at  
23 the top it says "desktop search query share" and "mobile search  
24 query share."

25 Do you see that?

1 A. I do.

2 Q. And do you see that it shows for mobile search query share,  
3 it shows 77 -- 97 percent? Do you see that?

4 A. I do see that number.

5 Q. Okay. And for desktop, it's 84 percent?

6 A. I see that number, yes.

7 Q. And you understand that those numbers are relevant to  
8 general search engines, not including Amazon or Facebook or  
9 anything like that, because they wouldn't be those numbers if  
10 they were?

11 A. I actually don't know what these particular numbers are,  
12 but if that's your representation, I don't have a quarrel with  
13 it.

14 Q. Okay. And you don't dispute that Google has routinely  
15 created query share, search share numbers where it only compares  
16 its itself to general search engines? You're not disputing  
17 that?

18 A. I'm not disputing there's a set of documents that compute  
19 share -- I mean, I think I talked about it in my direct  
20 testimony, compute shares in this group.

21 Q. Okay. And you've never seen Google calculating market  
22 share on a query-by-query basis?

23 A. I don't know what that means exactly. These are counting  
24 up queries.

25 Q. Okay. Well, fair enough. You've never seen a document

1 where Google says let's look at query "how tall is the Eiffel  
2 Tower" and said okay, what's our percentage of the market for  
3 queries about how tall the Eiffel Tower is, what's our  
4 percentage of -- you haven't seen them do that, have you?

5 A. Not fully disaggregated like that. I've certainly seen  
6 them do a lot of analysis by vertical.

7 Q. Okay. And there are industry resources out in the market  
8 where you can buy measures of query share -- I'm sorry, of  
9 search share or market share for the general search engines; is  
10 that right?

11 A. That sounds right.

12 Q. Okay. So, you know, like Comscore, StatCounter, eMarketer,  
13 those are corporations that actually assemble and sell market  
14 share data; right?

15 A. They sell a lot of data, including share data.

16 I should be clear, in your earlier answer, you said for the  
17 general search engine market. Obviously, I disagree that's a  
18 thing. But they compute shares for general search engines.

19 Q. Okay. So another place we can look at is sort of in the  
20 industry, there are calculations out there by third parties  
21 measuring general search engines and how that -- if you don't  
22 want to call it a market, how those people divide up what  
23 they're doing; right?

24 A. Yeah, I agree. There's a set of firms that compete in that  
25 way, and there are people who are computing how well they're

1 competing within that group.

2 Q. And some people must be interested, because those companies  
3 wouldn't go to that effort if they didn't have somebody to sell  
4 it to; right?

5 A. I think people are interested in data of many, many cuts,  
6 and certainly, one interesting cut is to look at yourself versus  
7 other GSEs. Others look by vertical at your competition that  
8 exists there.

9 Q. But I'm talking about third parties. Third parties have an  
10 interest in looking at data about how the GSEs distribute GSE  
11 queries; right?

12 A. I agree that's one cut that they do. We certainly also  
13 looked at lots of third-party information that's by vertical  
14 that looks at SVPs versus GSEs. I think all of that is data  
15 that helps you understand all the elements of competition.

16 Q. Okay. So let's go to UPX2022.

17 This is in evidence, Your Honor.

18 Are you familiar with this document, sir?

19 A. I don't remember. It's -- I just don't remember.

20 Q. There's a lot of documents in the case. I understand, sir.  
21 You've got the binder, but we're going to try to make this  
22 easier for you and I on the screen.

23 A. We probably share eyes that don't work as well as they used  
24 to.

25 Q. Okay. And so this is a document where Google compares

1       itself to Bing. You can see the title. So that's a giveaway;  
2       right?

3       A.    Yeah, this looks like a document of a comparison between  
4       Google and Bing.

5       Q.    And if we go to the fourth page, Bates 593, and we're going  
6       to bring it up so it's easier to see.

7            And do you see the heading "Bing is faster in part due to  
8       our server-side latency increasing since Q3 2106"? Do you see  
9       that?

10      A.    I do.

11      Q.    So this would be an example where Google is comparing  
12      itself to Bing not on search share but on another avenue,  
13      latency; right?

14      A.    Correct.

15      Q.    Okay. And we will agree that latency is one way that  
16      Google and Bing compete against each other; right?

17      A.    It's one way that -- yes, I think Google and Bing and many  
18      others, most websites compete on this basis.

19      Q.    Okay. And have you seen any documents comparing Google to  
20      SVPs on latency?

21      A.    There are lots of documents that compare Google to Amazon  
22      and other SVPs on lots of dimensions. Whether latency is one or  
23      not, I don't remember.

24      Q.    Okay. No further questions on that document, sir.

25            Let's go to UPXD063. That's not in a binder. It's just

1 going to be a slide, although we're happy to pass them out.

2 May I approach, Your Honor?

3 THE COURT: Sure.

4 BY MR. DINTZER:

5 Q. Just to make it easier to see, sir.

6 And so are you familiar -- you're welcome to look through  
7 this. I know that you've been following the trial. Are you  
8 familiar with the testimony -- all the testimony that we see on  
9 this slide?

10 A. Generally, yes. I've read some of this more completely  
11 than others.

12 Q. And so we have had testimony, like from Mr. Higgins:

13 "Question: During your time in device marketing, has  
14 Verizon ever set a vertical search provider as the default  
15 search engine on a device?

16 "Answer: I'm not aware of that happening."

17 Mr. Weinberg:

18 "Question: And who does DuckDuckGo consider to be its  
19 search engine competitors?

20 "Answer: Really, most of our users switch to Google, so  
21 like far and away."

22 Mr. Tinter from Microsoft:

23 "Question: And thinking about the market today, who are  
24 Bing's search competitors?

25 "Answer: Candidly, when we talk about competition, it's

1 one company, it's Google."

2 Do you see that?

3 A. I do.

4 Q. Okay. So there was significant testimony at trial about  
5 people viewing Bing and Google and DuckDuckGo, participants in  
6 the general search market, as competitors; right?

7 A. I certainly agree they are competitors.

8 Q. Okay. And Mr. Weinberg and Mr. Tinter, they didn't  
9 identify Amazon as a search competitor?

10 A. Not in these answers, no. They seem to be focused here on  
11 Google.

12 Q. Okay. No further questions on that document.

13 Sir, Android -- and I know that you're not doing the  
14 conduct part of the case. So -- you are familiar roughly with  
15 the RSAs; right?

16 A. Yes.

17 Q. Okay. Android RSAs in the United States, they put  
18 restrictions on counterparties, whether they're OEMs or  
19 carriers; right?

20 A. Generally, that sounds right.

21 Q. Okay. And in the U.S., they prevent the pre-installation  
22 of, quote, alternative search services.

23 Are you aware of that?

24 A. Generally, yes.

25 Q. Okay. And this prohibits the pre-installation of other

1 general search engines like Bing that are close substitutes to  
2 Google; right?

3 A. Yeah, I think that's fair.

4 Q. Okay. The RSAs do not prohibit the pre-installation of  
5 specialized verticals like Amazon or Yelp; right?

6 A. That's my understanding.

7 Q. Right. It also does not prohibit the pre-installation of  
8 social networks, like Facebook and Instagram or TikTok; right?

9 A. That's also my understanding.

10 Q. So when Google was designing the RSA to ensure -- to  
11 protect its defaults, to get its defaults, it contractually  
12 prohibited Bing apps. but not Amazon or TikTok; right?

13 A. I don't think that's a complete description of how the RSAs  
14 are designed or why. I agree with your characterization of  
15 what's in them, but I don't think -- I think you give a very  
16 narrow description of what the RSAs have to accomplish.

17 Q. Okay. And that's fair, and that's really a conversation  
18 that I'm going to have to have with Professor Murphy. So I'm  
19 not trying to shoehorn you into the why. It's really the what.

20 Google said to the OEMs and to the carriers in the  
21 agreements it's okay for you to put -- we're not going to  
22 prohibit you from putting TikTok and Amazon and Facebook, we're  
23 not going to prohibit you from putting those on the devices;  
24 right?

25 A. That's what they say.

1 Q. Right. But they do prohibit and cite exclusivity regarding  
2 general search engines?

3 A. Yes. I mean, I have views on the why, but those aren't  
4 opinions I'm offering.

5 Q. And that will save both of us time. Like I said, this is a  
6 conversation we're going to have to have with Dr. Murphy.

7 A. Okay.

8 Q. Now, if I decide I don't want to use Google Search anymore,  
9 look, for whatever reason I don't want to use it anymore, maybe  
10 because I don't like their privacy policy, what's my next best  
11 option?

12 A. It depends on the search.

13 Q. Okay. And so in trying to figure it out, are you saying  
14 that if I give up Google, every time I make a search I'm going  
15 to have to say okay, where am I going to put this? There's not  
16 some other search engine out there that kind of does the same  
17 thing as Google and that I might go to instead?

18 A. To me, those are two different questions.

19 As I said clearly in my testimony, my view of common sense,  
20 I think, and the evidence is that every time a user makes a  
21 search now, they decide where to put it. So if I wasn't going  
22 to use Google anymore, when I shop, I would always start on  
23 Amazon, even if sometimes today I start on Google.

24 The answer would be different if I was looking -- if I was  
25 looking up presidents, I would probably start on Wikipedia. But

1 I think users make a decision search by search, and if they said  
2 never Google, then they would decide what to use minus Google in  
3 the consideration set.

4 Q. I'm writing down what you're saying, because we're going to  
5 talk about it. I may not be word for word, but every time a  
6 user does a search, they decide where to put it.

7 Is that roughly what you just said?

8 A. Yeah, there's a decision each time I query something.

9 Q. Right. If that was the case, then defaults would have no  
10 value at all; right? Because if every single time I said to  
11 myself where am I going to put this one, then the value of a  
12 default would be zero, because I would be, you know, every  
13 single time making that decision; right?

14 A. I don't see how those follow. There's been lots of  
15 testimony about the value of defaults, which is basically this  
16 sort of -- Professor Whinston even said it gives you a  
17 convenient position.

18 So I'm not denying that having a convenient position or a  
19 convenient app. might affect the decision each time you search.  
20 I'm just saying each time I search, at least, I think about is  
21 Google a good place for this, or am I going to find it better  
22 somewhere else.

23 Q. So let's go to UPX0811, which is in evidence. And there's  
24 a cover, and then there's a -- and you can tell me if you've  
25 seen it. I'm really going to be asking about the deck. So we

1 can go to the next -- to the first page of the deck,  
2 please, "private searching on Google."

3 Have you seen this?

4 A. I'm not recalling this one, although this is only the cover  
5 page. So --

6 Q. Okay. And the cover kind of gives you a tip-off about what  
7 we're going to be talking about.

8 This is prepared in June 2019. Do you see that?

9 A. I do.

10 Q. Okay. And so we're going to go to -- and I'll just spill  
11 the beans. This is a Google document considering a privacy  
12 mode. Okay?

13 A. Okay.

14 Q. We're going to go to page -- Bates 4416, page 16 of the  
15 deck. So this is not going to be on the slide for  
16 confidentiality reasons, but you should have it in your binder.  
17 Just let me know when you've got it.

18 A. Sorry. I was just using the screen.

19 Q. I understand, and we would like to do that, but --

20 A. Just remind me of the tab number.

21 Q. Yes, sir. It's UPX811. That's the UPX. And the Bates  
22 number that you're looking for is -- it's the seventh page,  
23 4407.

24 A. I haven't even found 811.

25 Q. Just let me know when you're there.

1 A. UPX811?

2 Q. Yes, sir.

3 A. There it is. Sorry to be slow.

4 Q. Sorry we can't share it with you on the screen.

5 A. And tell me the Bates again.

6 Q. Okay. So then in that, you're going to go to 4416.

7 A. Okay.

8 Q. Okay. And so this is a Google document considering  
9 privacy, and Google is comparing itself to other general search  
10 engines with privacy features.

11 Do you see that?

12 A. I can barely see the page.

13 Q. I'm sorry we can't blow it up. Okay.

14 At the top, you will see Google. Do you see the really  
15 small duck? Do you see a Q for Qwant? Do you know what Qwant  
16 is?

17 A. I actually don't.

18 Q. Okay. Well, let me put it this way: In comparing itself  
19 on privacy, do you see any reference at the top to Amazon or  
20 Facebook?

21 A. I don't see Amazon or Facebook on this page. It's a very  
22 long document that I don't recall.

23 Q. Okay. No further questions on it.

24 Let me ask you this: Have you seen any document maybe that  
25 you can cite to the Court where Google compares itself on

1 privacy to something other than a general search engine?

2 A. I'm not recalling any. As I said, I haven't focused on  
3 privacy, per se. So I just -- I don't recall.

4 Q. But you agree that privacy is one of the ways, I think you  
5 said this yesterday, that general search engines compete; right?  
6 I mean, that's one of the axes of competition?

7 A. I think I said it seemed like a dimension of quality, but  
8 also not one that I focused on on its own terms.

9 Q. And that's fine. I'm not going to go deep on privacy.

10 Privacy is a dimension of quality, and quality is one of  
11 the ways that general search engines compete; right?

12 A. I mean, I think it's very much a way that all these  
13 platforms -- you know, all these platforms are worried about it.  
14 Certainly, it's been an issue for social media sites, for SVPs.  
15 Privacy has been an issue they have all focused on.

16 Q. They all have, including the general search engines; right?

17 A. That sounds right, yes.

18 Q. Okay. Now, you've seen evidence -- we're going to turn to  
19 Apple.

20 You've seen evidence that Apple has considered roles it  
21 could play as a general search engine and whether it could enter  
22 the market; is that right?

23 A. Generally, yes.

24 Q. Google has considered Apple as a potential entrant that  
25 Google has to worry about; is that right?

1 A. At that level, that sounds correct.

2 Q. And Apple has considered entry; right?

3 A. I mean, I guess Apple's testimony will speak better than me  
4 characterizing it exactly that way.

5 Considered entry? I've certainly seen testimony that Apple  
6 has investigated general search and has said it felt that it  
7 could enter if it desired to.

8 Q. Okay. And your idea about queries, we know that Apple  
9 answers some queries. So at least in your theory, Apple is  
10 already in competition with Google to answer any general query;  
11 right?

12 A. Well, I'm not sure I follow that form of the question.

13 Q. We can pull up an Apple home page. But I'm guessing -- I  
14 actually haven't looked, but I'm guessing that somewhere on that  
15 page --

16 A. Oh.

17 Q. -- there's going to be a -- just let me finish. There's  
18 going to be a box that can do a search; right?

19 A. Sorry. I wasn't trying to cut you off. I just said "oh."

20 Q. So if we turn to the Apple home page -- I will confess I  
21 haven't looked at it -- we can assume somewhere in that there's  
22 going to be a box that can do a search; right?

23 A. Apple in that sense -- that's why I said "oh," because I  
24 was realizing you meant Apple, like on their product page.

25 Apple is a retailer basically that has a search page -- or a

1 search bar where you can search for products.

2 Q. So in that sense, they're already in competition with  
3 Google to answer queries; right?

4 A. I think I said -- it wasn't one that I featured or said is  
5 one of the strongest or biggest competitors in this sense, but I  
6 mentioned that retailers generally are places you can go and do  
7 some of these queries.

8 Q. Okay. And when Apple -- you used the word "redirects."  
9 When Apple is on Safari and redirects a query that it handles  
10 itself, it's in competition with Google? It's a query that  
11 Google doesn't get; right?

12 A. And I'm just thinking that one through.

13 I think the word I used was "intercepts." When Apple  
14 intercepts a query that doesn't go to Google, yeah, that's a  
15 query that Google doesn't get.

16 Again, Mr. Giannandrea's testimony will be sharpest on  
17 that, but I think that was his characterization, too. Apple  
18 wants to get those queries, and those queries don't go to the  
19 GSE.

20 Q. Okay. So when Apple intercepts queries from Safari, it's  
21 competing with Google?

22 A. I think that's a form of competition, yes.

23 Q. Okay. And just so we're clear, that's the Apple  
24 suggestions that I think has been discussed at trial; right?

25 A. I think it included Spotlight and Safari and things. I

1 think the general testimony was for things that you enter, Apple  
2 tries to answer itself when it can.

3 Again, the testimony will speak better than my memory.

4 Q. Okay. But you do understand that on Safari, Apple offers a  
5 service called "suggestions"; right?

6 A. That may be. I don't remember.

7 Q. Okay. Do you understand that Apple has its own index and  
8 crawls and its own data to answer questions?

9 A. Yes. I think some of these intercepts we're talking about,  
10 or a lot of them, was Apple's Knowledge Graph, maybe they call  
11 it, where they try to collect whatever information they can and  
12 answer a lot of things themselves.

13 Q. And Google has reacted to Apple's possible entry; right?

14 A. At that level, that sounds right.

15 Q. Okay. In Apple's distribution contract, which we're not  
16 going to get to the exact price, but it's priced in the  
17 billions? You're aware of that?

18 A. And I think of it as a revenue share that results in  
19 billions of dollars of revenue.

20 Q. Okay. And Apple's contract with Google affects Apple's  
21 decision regarding entry; right? It must.

22 THE COURT: Sorry. Can you repeat the question?

23 MR. DINTZER: Of course, Your Honor.

24 BY MR. DINTZER:

25 Q. Apple's contract with Google affects -- let me make it even

1 clearer.

2 Apple's ISA, where it revenue shares from Google, affects  
3 Apple's decision regarding Apple's entry; right?

4 MR. SOMMER: Objection to form, Your Honor.

5 THE COURT: I will sustain it insofar as -- are you  
6 asking him what Apple actually is -- its motivation is or his  
7 opinion about --

8 MR. DINTZER: The economics of it, Your Honor.

9 THE COURT: Okay. He can answer the question to the  
10 extent that --

11 MR. SOMMER: It's certainly beyond the scope of his  
12 testimony and his report.

13 THE COURT: Well, I don't think it's beyond the scope  
14 of his direct testimony. I think he can answer the question to  
15 the extent he has a view about the economics of it, but not a  
16 view about the evidence as to what Apple's motivations, in fact,  
17 are or are not.

18 MR. DINTZER: Thank you, Your Honor.

19 BY MR. DINTZER:

20 Q. Do you need the question again, sir?

21 A. Yes, please.

22 Q. Okay. Apple's contract, the ISA, with Google affects  
23 Apple's decision regarding entry into the general search engine  
24 market?

25 A. I struggle with it in that form. I mean, Apple is a firm,

1 like many firms, making what I would call a make-versus-buy  
2 decision about how to handle search. And the ability of a buyer  
3 to make a make-versus-buy decision affects the terms that they  
4 get from providers. It puts competitive pressure on Google.

5 And so I think those terms that they get ultimately, you  
6 know, Apple weighs its options as a matter of economics. But I  
7 would describe it as Apple having an option to make it itself  
8 affects the terms. It's sort of reverse cause and effect in the  
9 way you asked the question.

10 Q. Okay. And you gave me a long answer that I'm having  
11 trouble parsing. So I'm going to ask you a very simple  
12 question.

13 The contractual terms between Google and Apple affect  
14 Apple's decisions regarding entry; right?

15 MR. SOMMER: Objection; asked and answered. That's  
16 the exact same question he just answered.

17 THE COURT: I'll allow him to answer it one more time.

18 BY MR. DINTZER:

19 Q. It's a very simple question, sir.

20 A. I think the terms it gets are an outcome of competition,  
21 and ultimately, Apple got terms from Google that it accepted,  
22 and that influences the decision that it makes.

23 Q. Including the decision to enter?

24 A. Yeah, I think the make-versus-buy decision puts competitive  
25 pressure on Google, leads to terms that led Google to choose to

1 buy, not make.

2 Q. Now, I understand we're going to disagree --

3 THE COURT: Sorry. You mean Apple to buy, not make;  
4 right?

5 THE WITNESS: Yes.

6 BY MR. DINTZER:

7 Q. If -- I understand we're going to disagree about whether  
8 Google is a monopolist. So this is framed as a hypothetical.

9 If hypothetically Google was a monopolist, it would still  
10 have an interest in paying Apple on the ISA to keep it out of  
11 the market; right?

12 A. Sorry. I'm just struggling with "monopolist" there. I  
13 link that to monopoly power, which I assume means there are  
14 barriers to entry. So if Apple is a credible threat to enter  
15 such that it had to be paid a lot of money not to, then I think  
16 that fact alone means there's not monopoly power.

17 Q. So if -- I'm going to try again, and I will use "monopoly  
18 power" now.

19 If hypothetically Google had monopoly power and Apple was a  
20 potential entrant that it could enter, Google would have a  
21 financial incentive to pay Apple not to enter; right?

22 A. And again, I'm struggling, because to pay it a lot of money  
23 indicates that it takes that threat seriously. Right?

24 And the second factor we look at in monopoly power is  
25 barriers to entry. So the fact of a lot of -- if you're saying

1 there's a lot of payment to Apple because Apple is seen as a  
2 credible threat, I think that argues against monopoly power on  
3 its own.

4 Q. Because there's one possible entrant?

5 A. I mean, it's Apple, and if there's a large payment to them  
6 that under your hypothetical is predicated on the threat that  
7 they will enter, that factor on its own argues against monopoly  
8 power. It's not the end of the inquiry, but it argues against  
9 monopoly power.

10 Q. Now, in your report, you wrote, "Because any search engine  
11 is just a few keystrokes away on any desktop or a swipe away on  
12 any mobile device and because searches of different types often  
13 occur in different visits, such time costs are minimum."

14 I'm happy to show you your report if you would like to see  
15 that.

16 A. That sounds right.

17 Q. Okay. So you're saying that the costs of maneuvering  
18 between different search engines, whether it's clicking or --  
19 clicking or swiping are minimal to get from one search engine to  
20 another; is that right?

21 A. I think that's right. Not nonexistent, but in the range of  
22 switching costs we see in cases, quite low.

23 Q. Okay. So let's look at UPXD065, and that will be on the  
24 screen, sir, and I will hand it out, too, just to make sure.

25 May I approach, Your Honor.

1 Do you have that, sir?

2 A. I do.

3 Q. Okay. So this is a Google Search of hiking boots.

4 Do you see that?

5 A. Yes.

6 Q. And so if I'm already in a browser, if I put my search term  
7 into the top, it's immediately served. I don't have to go  
8 anywhere. Right?

9 A. If you're inside a browser and you put your search term in  
10 the bar, yes.

11 Q. Okay. And so there will be some amount of time to get  
12 anyplace else, to any other place to search if I'm already in  
13 the browser.

14 We'll agree on that; right?

15 A. If you wanted to go to Zappos, you would have to put Zappos  
16 in the browser and then click. So there would be one extra step  
17 in this example.

18 Q. Well, let's be clear. If I put -- if I put -- if I wanted  
19 to go to Amazon, I wanted to use the app., I would have to close  
20 the browser and open up the app.

21 It would be at least a couple of functions there; right?

22 A. If I'm on a phone and I'm in any one app., whichever app.  
23 it is, I have to click on the other app.

24 Q. Okay. So there's some switching costs?

25 A. In either direction in that case, yes.

1 Q. Okay. But if --

2 A. At minimal, as I said before, but in either direction,  
3 there would be one step to click on the other app.

4 Q. Okay. Now, the sponsored options -- if we can please bring  
5 them up, the sponsored options, those are PLAs; right?

6 A. Those are examples of -- what you're showing me now is an  
7 example of a PLA.

8 Q. Okay. And so those include from Adidas, North Face,  
9 Palladium; right?

10 A. That's what's up here, yes.

11 Q. Okay. And if we look down below the PLAs, we see one of  
12 the blue links for REI; right?

13 We're going to make it bigger. This is a lot of things,  
14 but it is not a sight test.

15 So we have REI. Do you see that?

16 A. I do.

17 Q. Are you familiar with REI?

18 A. Yes.

19 Q. And then we have Switchback Travel. That's a website.

20 Do you see that?

21 A. I do.

22 Q. Those are both blue links; right?

23 A. They are.

24 Q. Okay. Now, to find out that all these websites, the three  
25 PLAs -- and there's more, of course -- and the two blue links,

1 to find out that all these websites had information about hiking  
2 boots would take a number of clicks; right? I'd have to visit a  
3 number of different sites?

4 A. I mean, it depends how you go about it. So I'm not sure I  
5 follow.

6 Q. Okay. On this one general search engine, I found out that  
7 I could get -- at least there's some information about hiking  
8 books from Adidas, North Face, Palladium, REI, Switchback  
9 Travel, and -- right? I mean, there's more, but we'll start  
10 with those five. Right? There's some information about all  
11 five of them; right?

12 A. Yes, there's some information about that set of websites.

13 Q. Okay. And if I wanted to get information, this same  
14 information that's on this general search engine, I would have  
15 to visit five websites?

16 A. I don't know what you mean by "have to." Are you asking me  
17 are there alternative ways to get this information?

18 Q. For these five, the specific information that I now have in  
19 front of all of us, I would have to visit multiple websites?

20 A. I mean, even here, I would have to visit the websites to  
21 figure out more details, but if I want a list of places that  
22 sell shoes, there are a few ways that I could do that.

23 Q. Right. And we'll get to that. But that's really not my  
24 question.

25 My question is, one of the benefits of a general search

1 engine is that I can get some information about a lot of  
2 different websites in one place so that it can help me make a  
3 decision about where I want to go.

4 So if I wanted to get the same information that Adidas has  
5 the Terrex, that North Face has the men's Vectiv, that Palladium  
6 has boots, that REI has boots, if I wanted to get all that  
7 information, that would take multiple websites; right?

8 A. Again, I'm not following the "would take." GSEs are one  
9 way to get information about multiple websites in one place.  
10 Lately, I found a very nice way to do it is to ask ChatGPT.

11 So there are different ways to do it. GSEs are one way to  
12 do it.

13 Q. And -- but does ChatGPT give you a SERP?

14 A. It gives you a list of websites. I mean, it depends on  
15 what you ask it. But lately, I found if you ask it where do I  
16 find shoes or flights, it gives me a nice list of places to go.

17 Q. Okay. And for this web page, for this information,  
18 specific information that I'm seeing here -- first of all,  
19 Google provided me the information that it thinks is the most  
20 responsive to the term "hiking boot"? We can agree on that;  
21 right?

22 A. Right. According to its ranking algorithms, that's what it  
23 determined.

24 Q. So if it got it right, so this is the world of good places  
25 to look, it would take multiple visits for different websites to

1 get this information? Yes or no.

2 A. I mean, that -- I guess going to other websites would be  
3 another way to do it, and I agree if you did it that way, you  
4 would have to make multiple clicks. GSEs -- for this sort of  
5 information, GSEs can do it. I think it's a nice -- it's a good  
6 use of these new AI tools. But those are the ways you could do  
7 it, maybe the app. store, depending on what you're trying to do.

8 But I agree, if you're trying to find a list of websites,  
9 there's a set of tools that can do that, and GSEs are certainly  
10 a good one.

11 Q. One of the things that GSEs do well is they give us a list  
12 of websites that have relevant information?

13 A. I think that's fair.

14 Q. Okay. And is ChatGPT -- do you know how often they refresh  
15 ChatGPT?

16 A. I think it depends on the service that you get. But I  
17 think the basic one that you have is the information is a year  
18 old or something.

19 Q. Okay. So if I'm looking for maybe something a little more  
20 up-to-date than a year old, ChatGPT would not be an option to  
21 get this type of information?

22 A. As the simplest form of ChatGPT stands now, that's correct.

23 Q. Okay. And you will agree that the information Google has  
24 given me is as current as they can make it, up to the minute,  
25 hour, something?

1 A. I mean, yeah, they're crawling the web. So it's current.

2 Q. Now, you have not done any analysis regarding how much more  
3 time it would take people to reconstruct this information that  
4 we see here, this type of information, by going SVP to SVP to  
5 gather it up?

6 You haven't sort of said, look -- because in your report,  
7 you say that such time costs to bounce around and find this  
8 information, you say, are minimal. But there's no analysis  
9 there to show how you've accumulated information to get to  
10 minimal.

11 So is there any analysis where you said, look, if we  
12 gathered the information and recreate what is on a SERP, a  
13 general search engine SERP, it would take this amount of time?

14 A. I haven't added it up for a particular search. I mean, my  
15 point was simply, if I wanted to buy these -- if I wanted to get  
16 a good list of shoes from a variety of vendors, I can go to  
17 Zappos, and that would be minimal cost.

18 Q. Right. And that would give you some information.

19 It wouldn't give you REI, though, would it?

20 A. It wouldn't give me the exact same list.

21 Q. But let's be specific.

22 A. If I wanted REI -- for REI in particular, I would just go  
23 to REI. But if I wanted -- if I know that I want a set of  
24 shoes, I could go to Zappos, and that would be minimal cost.

25 Q. That would. That would give you a set of shoes. But what

1 Google gives you is more information about a variety of vendors.

2 So REI-specific, that would be one piece of information  
3 that if you went to Zappos you would be missing out on, even  
4 though Google thinks that's the best response; right?

5 A. I mean, the response at the top are a list of shoes, and  
6 then it thinks the best -- it gives you the best place to go is  
7 REI.

8 Q. Okay. And that wouldn't come up if you went to Zappos. I  
9 need you to clarify that.

10 A. I don't know, as I sit here, if Zappos sells the REI brand  
11 or not.

12 Q. Okay. So you talked about one-stop shopping in your  
13 direct.

14 Do you remember that?

15 A. Yes.

16 Q. And you agree that one advantage a general search engine  
17 has over verticals is that it can handle virtually any type of  
18 query; right?

19 A. I don't know that I would call that an advantage. It's a  
20 fact.

21 Q. Okay. Well, browsers think it's an advantage because  
22 that's why they want them; right?

23 A. Right. So browsers -- we talked about this. Browsers need  
24 a backstop. So if browsers have a choice, they're giving users  
25 a Swiss army knife. But users who want to cut something don't

1 necessarily think the Swiss army knife is better.

2 Q. Okay. So let's go to slide 25 in your set.

3 A. I may be over-bindered now.

4 Q. And we may have more. If you need a hand at any time, sir,  
5 please let us know.

6 And just let me know when you're at slide 25, sir. And we  
7 also have it on the screen for you.

8 A. Oh, okay.

9 Q. To be clear, these are sessions, not queries; is that  
10 right?

11 A. These are visits.

12 Q. Visits. So you're comparing the number of visits, but  
13 you're definitely not counting queries, just to be clear?

14 A. Well, I am giving information on the number of queries per  
15 visit. That's in the text box.

16 Q. Right.

17 A. But the unit of observation is a visit, and then I'm giving  
18 various facts about visits.

19 Q. Okay. And so let's say I wanted to run a search about the  
20 next Nationals baseball game, which of course now won't be until  
21 next year, but maybe I want to buy ahead.

22 A general search engine can handle that query; right? We  
23 can agree on that?

24 A. As I understand it, the query is "who do they play next" or  
25 something?

1 Q. Sure, or just "Nationals baseball game."

2 A. A general search engine would give you responses to that  
3 query.

4 Q. Okay. And remind me -- you say at the bottom, it says,  
5 "User action separated by five minutes of inactivity"; right?

6 A. Yes.

7 Q. And just so we're clear, is inactivity, if I go and maybe I  
8 spend six minutes on the Nationals ticket site, which may take  
9 me to Ticketmaster, Nationals ticket site, and I take six  
10 minutes to buy those tickets, does that mean that we're  
11 resetting the clock on your exhibit?

12 A. This is Google's ordinary course definition. So I believe  
13 if you're not engaged with Google in some form for five minutes,  
14 that would be seen as another visit to Google after that.

15 Q. Okay. So I go to the Nationals website, and I spend six  
16 minutes, and I buy my tickets. And then I go back to the  
17 browser at the top, the URL, and I hit a new query, because it's  
18 been six minutes, this thing counts that as a whole new visit;  
19 right?

20 A. Right. It would see it as a separate engagement with  
21 whatever you choose to do next.

22 Q. So it would take us all the way back to 1; right?

23 A. It would -- I don't what you mean by "all the way back to  
24 1." It would restart another visit.

25 Q. But what you're showing, the 1, 2, 3, 4, you're showing the

1 number of queries, right, in a certain amount of time?

2 A. This is the number of verticals reached in a single visit.

3 Q. The number of verticals reached in a single visit?

4 A. For the percent. One would say whatever this percentage  
5 is, I won't say the number, a visit has that many verticals  
6 or -- yeah.

7 Q. Okay. And I put it in a different way. Let me try putting  
8 it this way: The visit starts -- we start out fresh, and the  
9 visit starts, and if I go -- according to you, if I go Amazon  
10 and then within five minutes I do healthcare, then I get two  
11 within that visit; right?

12 A. Yeah, so if I interact with Google to go look at Amazon and  
13 then a healthcare within Google in that visit, that's two  
14 verticals.

15 Q. Okay. And so that would take me to the number 2 here;  
16 correct?

17 A. Correct.

18 Q. I wanted to make sure we understand.

19 So if I go to Google and I go to Amazon and I spend six  
20 minutes and then I go back to Google and I go to healthcare,  
21 that counts as two one-query visits; right?

22 A. Correct. Those are separate -- the way Google is  
23 identifying this, those are two interactions with Google.  
24 They're separate visits; they're separate interactions.

25 Q. So if I'm interacting with whatever the places that I go to

1 are for any amount of time, it will -- according to this  
2 approach, it will de-aggregate how many verticals I'm visiting,  
3 I'm actually going to, because what -- the visit length is only  
4 five minutes; right?

5 A. Well, the break has to be five minutes.

6 Q. Okay.

7 A. So the ordinary course logic of Google that I agree with  
8 and am using is that if there's five minutes in between the  
9 interaction, the next time you go to Google, you know, you're  
10 having a separate interaction with it.

11 And I take it if you did Amazon, went away for five  
12 minutes, and later you're going to go to healthcare, my point is  
13 that there's a separate decision when you go to healthcare where  
14 you get that information. And you could go back to Google, or  
15 you could go straight to WebMD, or you could go to an app. on  
16 your phone. But it's a separate decision you make some period  
17 of time later.

18 Q. Well, you're saying I went away. I didn't really go away.

19 Let's go back to 25, because what you're doing is you're  
20 drawing a conclusion from how big the number 1 bar is; right?  
21 You say that most people are only going for a single topic.

22 But if I go onto Google and I get my -- and I  
23 put "Nationals baseball" and I get my tickets and then I go back  
24 to the URL without going anyplace else and I want to check out  
25 the weather for the game in two days and then I futz around with

1 the weather website because maybe there's a hurricane and I get  
2 interested in something for six minutes and then I go back to  
3 the URL and I want to find a good place to eat near the  
4 ballpark, in reality, I've used the Google search engine  
5 repeatedly to find different things in what you call different  
6 verticals, but -- and you're breaking that up so that they all  
7 become 1.

8 But in the way that I experience that as a typical GSE  
9 user, I've just sat there at my computer and made a series of  
10 searches and interacted with the product at the end of the  
11 searches.

12 MR. SOMMER: Objection to the form.

13 MR. DINTZER: That may be a bit long, sir.

14 MR. SOMMER: Is there a question?

15 MR. DINTZER: That's entirely fair. Let me try to  
16 shorten that one. I was on a roll, Your Honor. I apologize.  
17 Let me simplify it.

18 BY MR. DINTZER:

19 Q. You're drawing a conclusion from the big 1 model, that  
20 people are not using a Swiss army knife, that they're just using  
21 a knife; right? You're making a conclusion from that.

22 A. I'm making a conclusion from the way they're interacting  
23 across different visits.

24 Q. Okay.

25 A. I mean, I can respond to your earlier question if you want

1 me to.

2 Q. We got an objection. So I -- the key here is the  
3 definition of a visit. If we change that number from five  
4 minutes to in 30 minutes, then one would go down, and the others  
5 would go up; right?

6 A. You would be requiring a 30-minute break between them. So  
7 this is Google's ordinary course definition, which is why I use  
8 it. But if it required a 30-minute break, then you could have  
9 places in between them where there was a ten-minute break and  
10 somebody comes back and you would count that as one interaction.

11 I intentionally stuck with Google's ordinary course  
12 definition to get at this idea. Implicit in your earlier  
13 question was each time you go back to the URL, which first of  
14 all is a very PC and not mobile concept, but second of all, it  
15 was a decision.

16 I tend to think in this case in terms of the phone. So if  
17 I'm on Google and then I go to Amazon for five minutes and then  
18 I choose what to do next, and that may be go back to Google or  
19 it may be do something else, but it's a separate decision.

20 Q. So I think you answered my visit question. If the visit  
21 was defined to be a longer period of time, the 1 bar on slide 25  
22 would go down, and the others would go up?

23 A. I think you would be aggregating together what Google  
24 considers to be separate visits. So by aggregating, you would  
25 have that effect.

1 Q. Okay. And if it turns out that the way people search is  
2 that they don't -- they actually spend time on the places that  
3 they've searched before they go back to the Safari browser on  
4 their iPhone, if it turns out they do that more often, then it  
5 would make these other bars go up; correct?

6 A. I don't think the bars would change unless we changed the  
7 definition of a visit.

8 Q. You haven't done the analysis -- that's fair.

9 A. The bars wouldn't change unless we changed the definition  
10 of a visit.

11 THE COURT: I take the point. Why don't we move to  
12 the next topic.

13 MR. DINTZER: Okay. Thank you, Your Honor.

14 BY MR. DINTZER:

15 Q. And in your deposition, I asked you in which SVP I could  
16 search for the query "restaurant in Southwest D.C. with a red  
17 awning that sells biscuits."

18 Do you recall that?

19 MR. SOMMER: Page number, please.

20 MR. DINTZER: That's at 133 and 134.

21 MR. SOMMER: Thank you.

22 BY MR. DINTZER:

23 Q. Do you recall me asking that?

24 A. I didn't hear the question.

25 Q. I will repeat it. In your deposition, I asked you which

1 SVP I could search for the query "restaurant in Southwest D.C.  
2 with a red awning that sells biscuits."

3 A. I recall that. And I think I said Yelp.

4 Q. Okay. Have you actually looked at Yelp to see what kind of  
5 an answer they would give?

6 A. I have not.

7 Q. Okay. And so let's put that up on the screen.

8 And it says "no results for restaurants in Southwest D.C.  
9 with a red awning that sells biscuits."

10 So this would be a null response; right?

11 A. It appears to be for that particular query.

12 Q. Okay. And so if you don't know which SVP is the best  
13 option for your search, finding the best information could take  
14 many clicks; right?

15 A. Yeah, in general, if you don't know the best information to  
16 get you the best answers that you want, you might have to try  
17 more than one thing. I think that would include a GSE, too,  
18 because if you start to get into information like this, then  
19 GSEs often don't give you what you want.

20 Q. Can we agree that this search would probably give me some  
21 response on a GSE?

22 A. I'm sure it would put something up. This is only personal  
23 experience, but I find when it's specific to things like this,  
24 what I get from a GSE is not really getting me there.

25 Another option that I might use, thinking about it sitting

1 here, would be to go to Apple Maps. But my experience would  
2 be a query like this, to get something this specific would  
3 probably take some experimentation across different sources.

4 Q. And that would take time? You would have to drop yourself  
5 into various SVPs to get information; right?

6 A. Or GSEs. I don't know that you would get information from  
7 a GSE that would be this precise. You might for this query.  
8 You may have tried it. But when I'm trying to get something  
9 specific about what's on Sixth Street in D.C., a GSE doesn't  
10 always get me what I'm looking for either.

11 Q. But one of the problems with your vertical approach is  
12 that -- let me ask it a different way.

13 If I'm searching for information on SVPs and I don't know  
14 which SVP is the best one to answer it, unless I go to a GSE, I  
15 have to hunt and peck amongst SVPs; right? Those are the two  
16 options?

17 A. If I don't know the best source, I may have to try various  
18 ones. I'm just saying, I don't think, for a query like this, I  
19 have any sense that a GSE is necessarily the best source.

20 I take your point that if I don't know, I have to look, and  
21 in some cases, it might be a GSE. In other cases, I'm quite  
22 sure it's Maps or Amazon. But if I don't know, then I have to  
23 figure it out.

24 Q. Okay. And there's a cost to that?

25 A. In cases where I'm not sure who is going to give me the

1 best information, there's a cost to searching.

2 Q. Okay. So in the deposition, I asked you about if I wanted  
3 to change the oil of a 1960s Ford Mustang, what website I would  
4 go to.

5 A. I think you asked me about a particular year that somebody  
6 told me didn't exist.

7 Q. It turns out that -- I said '63.

8 A. Afterwards, I was criticized for not knowing there was no  
9 such thing.

10 Q. It turns out that '65 was the first product year. So I got  
11 that one wrong.

12 But do you remember the answer that you gave me?

13 A. I don't remember. Maybe -- I don't remember.

14 Q. Okay. Cars.com. And they sell cars. They don't have any  
15 information about that. Both general search engines, Bing and  
16 Google, do have information about it. Okay?

17 Can we pull up UPXD067 -- I'm sorry, 068. Okay.

18 Okay. So these are both general search engines that have  
19 the query put into the top. And both of them have blue links  
20 for something called cjponyparts.com. Okay? It turns out that  
21 that's a website that has information about how to change your  
22 classic Mustang's oil.

23 Do you see that?

24 A. Not really. The screen is very blurry.

25 Q. Okay. I can hand it out. I don't know that that's going

1 to be any better.

2 May I approach, Your Honor?

3 THE COURT: Sure.

4 THE WITNESS: Yeah, just the screen is blurry.

5 BY MR. DINTZER:

6 Q. So you see that the first blue link is to cjponyparts.com?

7 A. I do.

8 Q. You didn't know about the website. I didn't know about the  
9 website. But this website actually has information about how to  
10 change your classic Mustang's oil.

11 Do you see that?

12 A. I mean, I don't know what's on the -- it looks like they  
13 have some information here about that, yeah.

14 Q. Okay. One of the benefits of a general search engine is  
15 that it can answer a query, even if I don't know -- even if I  
16 have no idea which SVP might have information; right?

17 So you talked about hunting and pecking and looking around.  
18 But this is one that unless you knew to hunt down cjponyparts,  
19 this is one none of us would have thought to look at without a  
20 general search engine.

21 A. I wouldn't know. I'm not a car guy at all. But I agree  
22 that if you have no idea where to look, you could type into a  
23 GSE and it may give you an answer.

24 Q. Okay. And so -- and the other part of my question, if you  
25 have no idea where to look, if you don't use a GSE, what's your

1 other option?

2 A. Again, I think generative AI tools are becoming another  
3 option for this. I take the point, and I agree, that there are  
4 cases where people search on GSEs. I think the bigger point I  
5 was making is if you're a car person or the first time you learn  
6 about this site, if this is an SVP that has a lot of car  
7 queries, you could use it forevermore.

8 There are cases where the first search in a session or the  
9 first search of your life is on a GSE. Then you learn about  
10 SVPs, and then you use them. Especially in a mobile setting,  
11 what happens to me usually is the first search I do is on a GSE.  
12 The second search is on the app. store. And the third search is  
13 on the particular app.

14 Q. Okay. And you know what a nav query is; right?

15 A. Yes.

16 Q. What's a nav query?

17 A. It's a query where you're seeking to go to another site.

18 Q. Okay. And so a lot of people, a lot of people use a GSE to  
19 navigate, for nav purposes; right?

20 A. You mentioned putting it at the top. A lot of people use a  
21 GSE with the bar at the top. And a nav query is basically just  
22 whether do you type dot-com or do you let the search engine do  
23 it.

24 Q. Right. But if you don't put the dot-com or maybe you don't  
25 know the exact -- it's cjponyparts, and you can't remember

1 exactly if there's a space or a dot, so you just type  
2 "cjponyparts," that's a nav search; right?

3 A. That would be a query designed to take you to another site,  
4 right.

5 Q. So along with the people who are intentionally searching  
6 for things on Google, there are people who use Google to  
7 navigate around the Internet based on nav queries; right?

8 A. Yeah, for sure. We talked about navigation queries. I  
9 talked about them in the report. I mean, I think of them as  
10 another vertical where the competition probably is largely the  
11 bar itself or on a mobile phone often is the app. store.

12 But yeah, that's one use of a general search engine, is as  
13 this vehicle to take me to other sites.

14 Q. Okay. And another -- sometimes people are just wrong;  
15 right? They say, oh, I want this information, but they're wrong  
16 about the information, and so they can't find the right website;  
17 right?

18 I will give you an example that was actually raised in  
19 testimony by Dr. Nayak. He said -- and we can pull it up. It's  
20 UPXD98. But he offered the example of, if you wanted to know  
21 more about the TV show Survivor and you typed in NBC Survivor,  
22 the problem is that you're wrong about where it is. So if you  
23 went to the NBC website to search, you would be wrong.

24 And so we were talking about when you don't know where to  
25 search, but this is another example. If you're just wrong about

1 some of the information, one of the things -- and Mr. Nayak goes  
2 into detail about the fact that they can do this -- is that the  
3 general search engine can find you information even when you're  
4 wrong about it; right?

5 A. Yeah, there certainly are occasions where a GSE gives you  
6 information where you mistyped the query.

7 Q. Mistyped, but also, if you said "the Eiffel Tower in  
8 London," you could be looking at London Guides for a long time  
9 and not finding the Eiffel Tower. But if you go to a general  
10 search engine, they're going to clean that up for you and take  
11 you to it; right?

12 A. Yeah, I agree there certainly are cases where the GSE gets  
13 you there. These are examples of how it helps you navigate  
14 somewhere.

15 Just to be clear, I don't ever want to say these GSE  
16 services would go all the way to zero. My point is just when  
17 there are SVPs out there, once you find the right one, then it  
18 gets the rest of the queries, and that's competition.

19 Q. So let's talk about air fryers, UPXD070. So I put in a  
20 query "air fryer recipes" into Google and Bing. And they  
21 both -- let's wait until we have it.

22 May I approach, Your Honor.

23 We put "air fryer recipes" into Google and Bing.

24 Do you see that?

25 A. I do.

1 Q. And they both show allrecipes.com as a good choice.

2 Do you see that? We've got a green box on the screen for  
3 help.

4 A. I do.

5 Q. Okay. So both those major search engines thought  
6 allrecipes.com would be a good place to go for my air fryer  
7 recipes.

8 Do you see that?

9 A. I do.

10 Q. Okay. Now, when I asked you about air fryer recipes in the  
11 depo, you said food.com would be a good option.

12 A. Yeah, I'm not a cook. That was one that I thought of on  
13 the fly.

14 Q. Of course. And so neither Google nor Bing listed food.com.  
15 It's not that they don't have recipes there, but neither of them  
16 thought that was the best choice.

17 Do you see that?

18 A. It wasn't Google or Bing's top choice.

19 Q. Okay. And so one of the other things that Google and Bing  
20 do, besides just providing links, is they curate the list. So  
21 they both think that the best choice, not just a choice but the  
22 best choice is all foods, and for somebody who is not really  
23 into food, which I understand, is they may not know what the  
24 best choice is. They might go to food.com or some other place,  
25 and they might get a recipe.

1           But one of the things that a general search engine provides  
2 is what they think is the best choice of the place to go; right?

3           A.    There's no doubt that a GSE, we talked about this, has an  
4 algorithm for putting what's first.

5           I think most cooks, I know many have places they go for  
6 this sort of thing. So they have their own best choice. That's  
7 really an SVP that gets a lot of queries. But Google and Bing  
8 have their algorithm that gives you their top choice.

9           Q.    Right.

10           And I know we're at the break. I think I can do this in  
11 two questions, Your Honor.

12           The point I'm making, sir, is that one of the things that a  
13 general search engine brings to it is sifting through SVPs and  
14 not just listing any, but based on the algorithm and their  
15 machine learning, everything that they do, providing what might  
16 be, what they think is the best choice, something that if I  
17 needed to go do that on my own, I would have to flip through a  
18 lot of different choices; right?

19           A.    I mean, they provide what they think is the best choice.  
20 In this case, I think in the food sense, there's a lot of SVPs  
21 that have their own views on the best place to get recipes. But  
22 I agree that GSEs tell you what they think is the best choice  
23 for any query that you enter.

24           Q.    And it would take a lot of clicks for me to recreate that  
25 analysis so that I could find the best choice myself; right?

1 MR. SOMMER: Objection to the form.

2 THE WITNESS: Yeah, I don't think I could recreate --

3 THE COURT: I'm sorry. The objection is overruled.

4 THE WITNESS: I should listen to that first. Sorry.

5 I don't think I could recreate what Google and Bing do. If  
6 I'm a cook, I probably have my own best choice, and other sites  
7 probably give me other best choices. But I don't think I could  
8 recreate the Google and Bing algorithm.

9 MR. DINTZER: Okay. With that, we're ready for a  
10 break, Your Honor.

11 THE COURT: It's a little before 11:00. We will  
12 resume at 11:15. See everyone shortly.

13 (Recess taken from 10:59 a.m. to 11:17 a.m.)

14 BY MR. DINTZER:

15 Q. Sir, Google only has 20 percent commercial queries; right?  
16 I think we talked about that.

17 A. Roughly 20 percent of queries return ads.

18 Q. Okay. And then -- and some of those are plumbers and  
19 lawyers and real estate brokers and insurance; right?

20 A. That sounds correct.

21 Q. And Amazon wouldn't compete for any of those, right,  
22 plumbers, lawyers, real estate brokers, and insurance?

23 A. That sounds right for that list.

24 Q. Okay. So of that subset of the commercial queries, Amazon  
25 only competes, under your analysis, for a portion of what's left

1 over; right?

2 A. Amazon competes primarily for shopping queries.

3 Q. Okay. And that would be a subset of the 20 percent minus  
4 all those people who can't advertise on Amazon; right?

5 A. Those sound like two different questions. It would be --  
6 the shopping queries are a subset of the commercial queries.

7 Q. So some number under 20 percent?

8 A. That sounds correct.

9 Q. Okay. Now let's go to slide 92 in your deck. Let me know  
10 when you're there, sir.

11 A. Okay.

12 Q. So as I understand it, this was based completely on  
13 Google's data; right?

14 A. I mean, this is Google panels data, but panels is not  
15 limited to use of Google.

16 Q. What is panels?

17 A. Panels is a sample of 10,000 or so U.S. users -- U.S.  
18 people. But it's not limited -- other than the fact that Google  
19 commissioned it, it's not Google data.

20 Q. Right. And it was a bad question.

21 Google owns this data. This is where the data comes from.  
22 They commission this, and it's their information?

23 A. This particular data is something Google has commissioned,  
24 yes.

25 Q. Okay. And so Google could have created this analysis

1 themselves, because it's their data?

2 A. That sounds right.

3 Q. Okay. There's no documents from Google that validate this  
4 analysis; right? You don't have any example where Google  
5 themselves have actually looked at this analysis or considered  
6 this analysis; right?

7 A. This is not based on a Google document. It's based on my  
8 analysis of the data.

9 Q. Okay. So you took the data from Google, and you came up  
10 with slide 92?

11 A. That's right.

12 Q. Okay. And then -- and the conclusion that you're drawing  
13 here is that people who use Google tend to use the blue bars  
14 more than the red bars; right?

15 A. There's more audience overlap. So from this particular  
16 picture, it would be within the same session. People who use  
17 Google show up more in the blue bars.

18 Q. Okay. And if I buy a car, we can agree that that would  
19 reduce my demand for a ride-sharing service like Uber or taking  
20 the bus, because now I have a car; right?

21 A. Yeah, I suppose. As an economist, I would say, is  
22 ownership of a car a substitute for a ride-sharing service? To  
23 some degree, yes.

24 Q. Okay. People who buy Toyotas, they visit the grocery store  
25 more often than they drive Hondas, right, because they own a

1 Toyota?

2 A. They visit the grocery store more often than they drive --  
3 I guess it depends whether they also own a Honda.

4 Q. That's it. If a person only owns a Toyota, they go to the  
5 grocery store more than they drive a Honda, because they already  
6 have a car, the Toyota; right?

7 A. I mean, in general, that sounds right.

8 Q. Okay. But the Honda is still the closer competitor to the  
9 Toyota than the grocery store is? The fact that they visit the  
10 grocery store more often, as people who use Google do for  
11 Amazon, doesn't mean that the grocery store is a substitute for  
12 the Honda; it just means that their need for a car has already  
13 been satisfied; right?

14 A. If the question is about cars, then I think Toyota and  
15 Honda compete more than Toyota and grocery stores.

16 I've lost the connection to this case.

17 Q. Okay. So regularly using more than one general search  
18 engine is rare; right?

19 A. Yes.

20 Q. Okay. Even if other general search engines such as Bing  
21 were more popular, more muscular, whatever, you would expect  
22 people to primarily use only one general search engine; right?

23 A. I would expect relatively limited overlap between the  
24 general search engines.

25 Q. By contrast, it's very common for people to use both a

1 general search engine and Amazon; right?

2 A. Correct, because Amazon not only offers queries, it does a  
3 lot more.

4 Q. Okay. You can buy stuff on Amazon?

5 A. Correct.

6 Q. Okay. So if we go up to UPXD074, so it would not be  
7 uncommon for someone to do research on a general search engine  
8 for like a television and then -- and this is what Mr. Raghavan  
9 says -- do research on -- Prime members who in any way intend to  
10 shop on Amazon might come to Google and do a lot of research  
11 before they do that, so we will see that correlation.

12 Do you see that? He uses the word "correlation" between  
13 Google and Amazon.

14 A. I mean, I see what he says. The correlation he was  
15 describing I think was in response to a question about how much  
16 Amazon Prime users use Google. So I don't think it's a  
17 correlation. I mean, I don't think the correlation is quite the  
18 way you just said it, but I see him saying people may do  
19 research at Google and then buy at Amazon.

20 Q. Okay. No further questions on that slide, sir.

21 Because general search engines are free, search engines  
22 compete on quality and other features. I think we agreed on  
23 that; right?

24 A. They compete for users with whatever they compete with on  
25 things other than price.

1 Q. And quality is the most salient competitive variable for  
2 search, because nobody pays a price.

3 A. Yeah, I mean, I think we talked about this in my  
4 deposition, too. Economists have a tendency to describe the  
5 world as price and quality, and those are the two things. So  
6 when it's not competition on price, as an economist, we tend to  
7 say it's competition on quality.

8 But that -- the way economists talk about that, that kind  
9 of includes everything else.

10 Q. Have you -- are you familiar with Project Charlotte from  
11 Google?

12 A. I don't recall the name.

13 Q. Okay. Let's go to UPX344.

14 Have you seen this document, sir?

15 A. I don't recall it from the cover page.

16 Q. Okay. It's in evidence, and it's cited in Professor  
17 Whinston's report, and it's 2019.

18 Let's go to the second slide, bullet 1.

19 A. This continues to just be really blurry on my screen.

20 Q. Okay. We're going to get this --

21 A. Oh, okay. That's better. Thank you.

22 Q. Is that better?

23 At bullet 1, "We have found no evidence of short-term  
24 negative per-user revenue impact or a negative query volume  
25 impact or a meaningful shift in query volume of shoppo queries

1 away from Google resulting from the user becoming an online  
2 retail loyalty program member or being active on large online  
3 retailers."

4 Were you aware Google of that, sir, that Google had  
5 actually done research and concluded that people who spent a lot  
6 of time on Amazon did not harm them?

7 A. I don't recall the full study, if I've studied it. I would  
8 have to look at the full study to see what's being compared to  
9 what. So I can't agree from what you're showing me on the "does  
10 not harm them," but I see the statement.

11 Q. Okay. And you haven't looked at this, so you didn't take  
12 this into consideration in your analysis?

13 A. I don't recall the study. I tried to look at query  
14 competition as opposed to sort of the broader elements of what  
15 each of them do. But I'm not recalling the study.

16 Q. So let's go to slide 2. And the second bullet says, "In  
17 fact, engagement on large online retailers and querying on  
18 google.com are positively correlated."

19 You understand what "positively correlated" means; right?

20 A. I do.

21 Q. Okay. That means when one goes up, the other one goes up;  
22 right?

23 A. Yes.

24 Q. Okay. No further questions on that document, sir.

25 Let's go to PSX0562. Now, are you familiar with any study

1 on correlations between the use of Amazon app. and Google Search  
2 use?

3 A. Not that I'm recalling, no.

4 Q. Okay. So let's go to PSX0562. Let me know when you're  
5 there.

6 A. Oh, I was waiting on the screen.

7 Q. This is one we don't have prepped, sir. It's in the  
8 binder.

9 A. Give me the number again, then.

10 Q. Of course. PSX0562.

11 THE COURT: I don't think it's in the binder.

12 THE WITNESS: I see it. It's the second tab in mine.

13 THE COURT: PSX -- okay. I'm sorry.

14 BY MR. DINTZER:

15 Q. And there's some confidentiality limits on this one. So  
16 we're going to be careful here.

17 Do you see the title here? It's dated 2020. Do you see  
18 that?

19 A. Yes.

20 MR. DINTZER: Your Honor, this is a Google document.  
21 We're going to offer it. It's not in evidence yet.

22 MR. SOMMER: No objection.

23 THE COURT: It will be admitted.

24 (Exhibit PSX0562 received into evidence.)

25 BY MR. DINTZER:

1 Q. Okay. And do you see that the general tenor of this is  
2 regarding Amazon app. usage and Google? Do you see that?

3 A. I do.

4 Q. And are you familiar with that document?

5 A. I think I've seen this.

6 Q. Okay. Let's go to Bates number 966.

7 Do you see the heading on 966 regarding app. users?

8 A. I do.

9 Q. And then the first sentence below that, "as expected," do  
10 you see that?

11 A. I do.

12 Q. And so -- and then the second box -- the second statement  
13 regarding correlation, do you see that?

14 A. I do.

15 Q. So the first thing we saw was about just general --

16 THE COURT: Is there any particular reason we can't  
17 read -- not looking at the numbers, but the --

18 MR. DINTZER: Thank you. We were working with them.  
19 So this is probably more us than them.

20 BY MR. DINTZER:

21 Q. The first one says, "As expected, Amazon users are also  
22 more likely to be regular and frequent Google users"; right?

23 A. Yes.

24 Q. You don't have any reason to doubt that; right?

25 A. That is consistent with what I've been describing.

1 Q. Okay. And the second one is, "There is a slight  
2 correlation of higher Amazon app. use to higher google.com  
3 frequency."

4 Do you see that?

5 A. I do.

6 Q. And it says, "But in general, all Amazon app. users see  
7 higher google.com usage."

8 A. I see that.

9 Q. You don't have any reason to doubt that either, do you?

10 A. Again, I would think people who are shopping and buying  
11 things more are running more queries in general. So my point is  
12 never that Amazon shopping competes with queries. It's that who  
13 gets the queries is the competition.

14 Q. So let's go to 976. This is page 15 in the document.

15 THE COURT: Can I ask a question? Is it -- your  
16 definition, and I don't know whether the numbers bear this out,  
17 but say there is a increase in Google usage by those who use  
18 Amazon, or let's say there's an increase in Google usage by  
19 those who also use the Amazon app.

20 Would you then consider them to be competitors?

21 THE WITNESS: I would for the queries. I mean,  
22 there's two things. And one is, I haven't fully looked at the  
23 study. So generally, people who use the Internet more are going  
24 to use both apps. more. But assuming it's that people who use  
25 the Amazon app. more that actually increases -- I'm sure that

1 they're buying more stuff. So it increases the queries.

2 So I don't think the query function at Google or Amazon is  
3 a competitor for the buying of the item. I think --

4 THE COURT: My point is slightly different.

5 Again, I don't know if the numbers bear this out, but it  
6 seems to be the general tenor of this slide, which is that the  
7 usage of the Amazon app. actually increases the number of  
8 queries that otherwise might not be on Google.

9 THE WITNESS: Right.

10 THE COURT: So if that's the case, do they still  
11 compete in the sense that you're referring to if in fact the  
12 existence of the Amazon app. actually benefits Google?

13 THE WITNESS: I think the all-in app., which gives  
14 people the ability to shop, that part of it is a complement for  
15 queries, right, the shopping portion.

16 I think the competition is, people are entering queries to  
17 find things to shop on. Within the Amazon app., the shopping  
18 portion and the searching portion are complements for each  
19 other. Right? But the fight between Amazon and Google is at  
20 the level of who gets the query that they can advertise against.  
21 Right?

22 So I can enter the query on the Amazon SERP --

23 THE COURT: You would say that even if, in the  
24 aggregate, Google benefits by people -- people who -- you're  
25 right, on an individual query-by-query basis, there's one or the

1 other, I suppose.

2 But at least this seems to suggest that people who are  
3 using Amazon with some frequency and using Amazon in the first  
4 instance might be using Google more.

5 THE WITNESS: So I think I would say at that sort of  
6 broad level, of everything Amazon and Google do, there are  
7 elements of complementarity between them, and the existence of  
8 the app. might help Google. They like that shopping apps. are  
9 there.

10 But the thing that keeps Google on its toes as a query  
11 competitor is that if it doesn't provide good query results,  
12 that 58 percent number who start at Amazon will just go up.

13 So the existence of Amazon and other shopping apps.  
14 probably expands the universe of queries to be had. That's  
15 probably why Google lets Amazon be put on the phone and so on.

16 But Google as a query competitor needs to compete well and  
17 provide good queries, or that 58 percent number who start on  
18 Amazon will go to 100 percent. They won't use Google for the  
19 query function.

20 So I think there's a SERP competition between the two of  
21 them, even though the broader functions have complementarity  
22 between them.

23 THE COURT: An app. like Amazon, it seems to me,  
24 actually functions to increase queries or probably in some sense  
25 across the board, because people who are using it are using it

1 in a way to purchase differently. They're using it to purchase  
2 delivery, online, as opposed to going to a store to make that  
3 purchase.

4 THE WITNESS: I agree that the existence of apps.  
5 generally increases queries as a whole, and Google likes that.  
6 But Google's got to provide good queries, or people can type  
7 them in on the SERP on Amazon.

8 So I would say that, again, I think there's -- queries  
9 might go from 100,000 to 200,000, but Google's got to fight for  
10 that with Amazon because Amazon can serve the queries itself.

11 BY MR. DINTZER:

12 Q. Sir, if you could go to page Bates number 976 of this  
13 document, of PSX562.

14 A. 976?

15 Q. Yes, sir. At the top, it says, "Do users alter their  
16 Google usage after adopting shopping apps.?"

17 THE COURT: Sorry. Could you state the page again?

18 MR. DINTZER: Of course, Your Honor. Bates number  
19 976, the last three digits.

20 THE COURT: I'm with you. I don't know if  
21 Dr. Israel --

22 THE WITNESS: I'm there.

23 BY MR. DINTZER:

24 Q. At the top, it says, "Do users alter their Google usage  
25 after adopting shopping apps.?"

1 Do you see?

2 A. I see.

3 Q. And it says six apps. were analyzed, three retail-focused  
4 apps, three nonretail-focused apps., and then it has the  
5 pictures of the six that they analyzed?

6 A. Yes.

7 Q. And it has some details about it, but if we go to the next  
8 page, 977, we get the reveal.

9 Do you see that?

10 A. I do.

11 Q. "No evidence of negative impact on google.com from app.  
12 adoption."

13 Do you see that?

14 A. I do.

15 Q. This study found that app. adopters were correlated with  
16 increased revenue and growth; is that right?

17 A. Right. I think this is the dialogue we were just having  
18 exactly. Apps. are good for queries, and then there's  
19 competition for who gets those queries.

20 Q. No further questions on that document, sir.

21 Let's go to your slide 47. Just let me know when you're  
22 there.

23 A. It's on the screen.

24 Q. This is a quote from Mr. Nadella; is that right?

25 A. Yes.

1 Q. And I think you referenced it about how -- about the  
2 relationship between Microsoft and Google, right, and Google  
3 coming out with its Bard after Microsoft presented ChatGPT with  
4 Bing; right?

5 A. I mean, that's the context of the discussion. I referenced  
6 it in a series of slides on Google innovating in response to  
7 competition.

8 Q. Okay. And you say "in response."

9 How many days after Bing came out with ChatGPT did Google  
10 come out with Bard?

11 A. I don't recall the number of days. I mean, Bard is  
12 something they had been working on, but I don't recall the  
13 timing of the rollouts.

14 Q. If I said it was just a handful of days, would you doubt  
15 that?

16 A. I don't doubt that.

17 Q. Okay. And so Google did not develop Bard in those handful  
18 of days; Google developed Bard over presumably a period of time?  
19 Right?

20 A. Google -- as I said, Google had been working on Bard, yeah.  
21 I mean, the rollout and the things that happened afterwards and  
22 Mr. Nadella's reference to their competition happened over time.  
23 But I would agree in general, competition is spurring Google to  
24 innovate, and that was not only the ChatGPT announcements.

25 Q. Okay. But competition from Bing. So Bing announced, and

1 within days, Google announced Bard; right?

2 A. Yeah. I mean, the timing, I'm not going to remember all of  
3 it. Google had a rollout soon after ChatGPT.

4 Q. Okay. Do you have any reason to doubt that the reason that  
5 Google announced Bard was because Bing announced ChatGPT?

6 A. I think Google is responding to competition from Bing here.

7 Q. Okay. Let's go to page 37 in your slide deck. And let me  
8 know when you're there.

9 A. It's on the screen. So I'm good.

10 Q. Okay. And you write -- this is regarding Professor  
11 Whinston. You write that he ignores all other Google documents  
12 focusing on SVPs.

13 Do you see that?

14 A. Right. It's in reference to this -- what I saw him put up  
15 in terms of Google documents.

16 Q. Right. And my question is, you didn't put up any; right?

17 A. As I said, I -- I don't recall everything. I think it was  
18 primarily data analysis. So this is a reference to the many  
19 documents on SVPs that are in my report in summary form here.

20 Q. Okay. But at trial, you didn't -- I mean, I just want to  
21 be fair. You say he ignores other Google documents, but you  
22 didn't show which documents you say he ignores that you have  
23 cited; right? You didn't cite any.

24 A. I mean, I didn't cite them in my slides. They're in my  
25 report, and I think they're in the record, but I didn't put them

1 up in my slides.

2 Q. Okay. Let's go to the next page. That's DXD38.

3 And you write, "The fact that SVPs advertise on GSEs does  
4 not mean that they do not compete."

5 Do you see that?

6 A. Yes.

7 Q. Okay. Now, one of your basic theories is people can easily  
8 navigate to SVPs; right? There's a minimum cost to moving  
9 around between SVPs; right?

10 A. I think I say the switching costs to go to another site are  
11 minimal. We had a discussion before about how you learn about  
12 that, and that can be different in different cases.

13 But my switching cost point is specific to once you have an  
14 app. or you have a website or a shortcut, those switching costs  
15 are minimal.

16 Q. Okay. But companies like Amazon and Expedia, they spend a  
17 lot of money, a lot of money advertising on Google; right?

18 A. Yes.

19 Q. Okay. And they do it because they think that that's the  
20 best way -- showing up on Google is the best way to get traffic;  
21 right? Otherwise, they wouldn't spend it.

22 A. I mean, you would have to ask them if they think it's the  
23 best way. They clearly think it's an effective way.

24 Q. Okay. If it turned out -- this is sort of a fly  
25 experiment. If it turned out that every single person could

1 with minimal costs and with great perception go to Amazon from  
2 wherever, then the value of that advertising on Google would be  
3 worthless, right, because people would just be, I've got a query  
4 for Amazon, I'll go to Amazon; right?

5 A. I don't think the two are directly connected. I think  
6 there's lots of things that are relatively easy to switch to  
7 that it's still useful to advertise to put them at the top of  
8 people's minds.

9 Q. So that people will then go to those sites?

10 A. You're trying to, in various ways, develop a reputation and  
11 encourage people to go to your site. So Amazon advertises in  
12 various places, one of them is on Google, trying to generally  
13 increase its usage.

14 Q. The search ads provide incremental usage?

15 A. Yeah, I think that sounds right. Advertisement wherever  
16 they advertise, I presume because they're doing it, increases  
17 their sales.

18 Q. Okay. Did you see Professor Varian's testimony?

19 A. I didn't see it. I've read it.

20 Q. Have you read it? Are you aware that he testified that if  
21 Google were to disappear, people would just switch to Bing?

22 A. I think I've seen him say that.

23 Q. Okay. And he actually identifies Bing as the specific  
24 alternative to Google?

25 A. I think that's what he said, yeah.

1 Q. Okay. And when he was asked about if Google and Bing were  
2 to disappear or if all general search engines were to disappear,  
3 then the Internet would be like a library without a card  
4 catalogue.

5 Did you see that?

6 A. I remember something. A comment at that level, I would  
7 want to see the testimony.

8 Q. Okay. Let's do that, UPXD075.

9 At the bottom, he was asked:

10 "Question: If all general purpose search engines were to  
11 disappear, the world would be like Borges' universal library  
12 with no card catalogue; right?

13 "Answer: Right.

14 A. That's what he said, yes.

15 Q. Okay. So at least in his take, he didn't say, well, it's  
16 okay, because people could search on SVPs or people could search  
17 on -- people would know where to go. He specifically called out  
18 that there wouldn't be a way to get around; correct?

19 A. I mean, yeah, you would have to ask him all of his meaning,  
20 but this is what he said. I mean, he also said there's no  
21 search market. So I'm not adopting his views on all these  
22 topics, but this is what he said.

23 Q. Okay. No further questions on that document.

24 Let's go to UPX0334. This is a speech Dr. Varian gave  
25 frequently. He testified about it. We're going to go to

1 page 2085. This is a chart that Dr. Varian presented apparently  
2 for years, and if we can bring that up.

3 So he provides across the top the product and then the  
4 different major providers, and along the left side -- and you  
5 will see that for general purpose search engines, he has Google  
6 and Microsoft.

7 Do you see that?

8 A. I do.

9 Q. And for special purpose search engines, which I think is  
10 what we're calling SVPs, he throws them all in.

11 Do you see that?

12 A. I don't know if he means the same thing we mean by SVPs. I  
13 don't know this document well enough. But he -- and he  
14 certainly isn't including all of the SVPs in the world, but he  
15 says these five companies all have a check there.

16 Q. He doesn't combine those two markets, though, does he? He  
17 has separate lines for those; right?

18 A. I don't think he's saying anything about markets here.

19 Q. Okay. No further questions on that document.

20 When you open up Amazon, they have some sponsored links and  
21 suggestions on the very first page; is that right?

22 A. That sounds correct.

23 Q. And let's pull up UPXD077.

24 May I approach, Your Honor?

25 THE COURT: You may.

1 BY MR. DINTZER:

2 Q. So you can buy things on Amazon without ever making a  
3 search; right?

4 A. Yes.

5 Q. If I buy a toaster on Amazon without ever doing a search,  
6 Amazon is not competing with Google on search; right?

7 A. Say that again.

8 Q. Sure. If I buy a toaster on Amazon without ever doing a  
9 search, maybe it pops up in the front and I click on it and then  
10 I get the page that has the ability to buy it and I buy it, if I  
11 go on Amazon and I don't do a single search, Amazon is not  
12 competing with Google Search; right?

13 A. There was no search to be competed for.

14 Q. Okay. And so in that case, Amazon is acting just as a  
15 complement to Google if maybe I did some search on Google  
16 before; right?

17 A. Well, that's a different question. Before, you said there  
18 was no search. If there was a search on Google before, then  
19 there's competition for the queries. So it's not just a  
20 complement. But if you just literally opened your Amazon app.,  
21 saw one of these ads and bought it, then there was no query to  
22 be competed for.

23 Q. Okay. No further questions on that document, sir.

24 Let's go to slide 20 of your presentation.

25 A. Okay.

1 Q. Are you there?

2 A. It's on the screen.

3 Q. It says, "Shopping: Google faces greater competition for  
4 users from Amazon than from Bing."

5 Do you see that?

6 A. I do.

7 Q. First of all, this is a chart you made for litigation;  
8 right? No Google document develops or tracks this specific  
9 information in this way?

10 A. Google doesn't have access to the Amazon query data.

11 Q. Okay. So my -- the answer is yes; right?

12 A. Google certainly tracks what Amazon is doing, but it  
13 doesn't -- it can't make this chart.

14 Q. Okay. Now, to make this chart, you had to decide which  
15 queries were shopping queries; right?

16 A. Correct. There is a grouping in the shopping queries.  
17 We've talked some about that definition.

18 Q. Are you familiar with Pedacat, P-e-d-a-c-a-t?

19 A. That's a Google tool that classifies queries.

20 Q. And if you run queries through it, it determines what type  
21 of query it is and breaks it down into potential verticals;  
22 right?

23 A. It does.

24 Q. You didn't use the verticals as Google defined them for  
25 this analysis; right?

1 A. That's correct. We've talked about that.

2 I focused on shopping queries that have PLAs.

3 Q. Okay. So for the visits thing that we discussed, you used  
4 the numbers that Google provided and how they do it in the  
5 ordinary course, but for this chart, you modified it, and you  
6 used a modification of it; right?

7 A. Yeah, that's fair. I mean, the visits minutes cut-off, I  
8 had no other basis. Here, I had this PLA basis that I wanted to  
9 focus on.

10 Q. So you made your own categorizations; right?

11 A. Well, yeah, that's fair. The shopping query focuses on  
12 queries with PLAs.

13 Q. Okay. Now, you also excluded -- and you say this at the  
14 top. You excluded nav queries; is that right?

15 A. Yes. As we discussed, I think of nav queries as basically  
16 a different vertical.

17 Q. But there is no actual vertical called nav queries; right?

18 A. Google doesn't list -- Google identifies nav queries in the  
19 Google ordinary course. I don't think they call it a vertical.

20 Q. Okay. That's because in ordinary course, Google groups nav  
21 queries in with their other verticals; right?

22 A. I think Pedacat includes them, groups them into verticals,  
23 but there's a separate Google tool that within the vertical  
24 tells you what's nav and what's not.

25 Q. Right. But Pedacat said if I put in Johns Hopkins or even

1 Amazon, that lists it as part -- as a search done for the Amazon  
2 or the healthcare vertical; right?

3 A. The shopping or healthcare vertical.

4 Q. Shopping or healthcare vertical.

5 A. Pedacat puts them in verticals, and a separate tool tells  
6 you whether they're navigational or not.

7 Q. And Google responds to nav queries by providing a link, but  
8 they do provide an SERP for that; right?

9 A. Yes.

10 Q. Okay. If I type "Facebook" into Google, I get an organic  
11 link to Facebook; right?

12 A. Yes.

13 Q. But Google can sell ads on navigational queries; right? In  
14 fact, they do?

15 A. Sometimes; often, yes.

16 Q. Okay. And other GSEs compete with Google for answering nav  
17 queries?

18 A. Yeah, among other things, that sounds right.

19 Q. Navigational queries are a significant volume on general  
20 search engines?

21 A. That sounds right.

22 Q. Professor Whinston calculated that nearly 12 percent of all  
23 Google queries are nav queries, and I don't believe you've  
24 disputed that.

25 A. I don't recall the number, but I don't dispute it's a

1 significant source of queries.

2 Q. Amazon doesn't handle any nav queries at all?

3 A. Amazon is not a competitor for nav queries.

4 Q. If I type Facebook into Amazon, I'm not going to get to  
5 Facebook?

6 A. That's correct.

7 Q. And by excluding nav queries from this chart, that meant  
8 that the green box and the red box would be bigger if there were  
9 nav queries, but since Amazon doesn't answer any, their box  
10 wouldn't change; right?

11 A. Right. I mean, yeah, this -- again, I think the right way  
12 as an economist to think about nav queries is a separate  
13 vertical. You're right that if -- that vertical would not have  
14 a bar for Amazon. So if you added them up, it would have the  
15 effect you described.

16 Q. Okay. Now, the queries that are called nav queries,  
17 sometimes they are actual efforts to navigate somewhere, and  
18 sometimes they're not; right? The actual word, there's a --  
19 sometimes, they're viewed as wanting to navigate to a specific  
20 site, and sometimes they're not that; right?

21 A. I'm not sure I follow.

22 Q. That wasn't a very good question. Let me try it again.  
23 Google uses context to classify a given query as  
24 navigational or not; right?

25 A. That sounds right.

1 Q. Okay. So sometimes the words alone are not enough to  
2 figure out if something's a nav query. Google needs the context  
3 to know if it's a nav query; right?

4 A. Google's classification tool uses the information it has.  
5 I will say most words are either almost always nav queries or  
6 never nav queries, but there is some context required, and it's  
7 not 100 percent.

8 Q. And you altered -- not only did you leave out the nav  
9 queries, but you altered Google's actual classifications  
10 regarding nav queries.

11 A. Not that I'm recalling.

12 Q. If a given query is labeled as nonnavigational more than  
13 80 percent of the time, you called that nonnavigational in all  
14 cases?

15 A. Right. I classified things by the query term. So like I  
16 said, there's a pretty big -- it's sort of very distinct. It's  
17 close to zero or close to 100. But I define things by the query  
18 term.

19 Q. Okay. But Google doesn't do that? Google actually uses  
20 context, and it has a more -- a more refined analysis about  
21 whether that specific term is a nav query or not?

22 A. It uses some context. It isn't just a query word. So  
23 again, it's pretty bimodal, it's pretty separated, but in order  
24 to have it be based on a word so that I could look at it in  
25 various data sources, I used this 80 percent rule.

1 Q. Okay. Let's go to slide 227 -- I'm sorry, slide 27 in your  
2 deck. And -- actually, let's skip this one. Let's go to slide  
3 20 in your deck.

4 THE COURT: I think we were just there.

5 BY MR. DINTZER:

6 Q. If you had used Google's actual shopping categories, the  
7 results would have been quite different; right?

8 A. I think that's right. What Google calls shopping includes  
9 things like "I just want to go to the store," like an actual  
10 physical store, whether it's different competitors than there  
11 would be here.

12 So I agree that the results would be different. You would  
13 still see SVP competition, but if you use a definition other  
14 than this PLA definition, you would see a different mix.

15 Q. Right. So if you hadn't adopted the definition you did and  
16 you used Google's normal course, you wouldn't know what  
17 figure 20 would look like; right? You haven't done that  
18 analysis?

19 A. Not that I recall. I tried again to do the aggregations  
20 that I thought made the most sense. It certainly wouldn't  
21 change the conclusion that Amazon gets a bunch and there's SVP  
22 competition. I just think it would be somewhat less  
23 informative.

24 Q. So let's go to -- let me ask you this: The user's intent  
25 is important in understanding an individual query; is that

1 right?

2 A. I don't understand the question.

3 Q. Sure. If we look at a query and look at the words, to  
4 understand what the user's actually looking for, it helps to  
5 understand what the user's intent is in typing in those words?

6 A. I think my whole point here is we should be analyzing  
7 substitution on the demand side as well as we can. So we should  
8 be trying to do our best to understand what options the user had  
9 open to them, and that depends on their intent.

10 Q. Okay. So let's go to UPXD081. And this is Dr. Raghavan.

11 A. In the binder or --

12 Q. That will come up on the screen, sir.

13 This is an example he gave about the term "mousetrap." If  
14 you type in the word mousetrap, you could be looking for tickets  
15 to the long-running play in London called Mousetrap, or you  
16 could be looking for a way to catch mice.

17 Do you see that?

18 A. I do.

19 Q. And he writes -- or he says, "And those are things -- cases  
20 where you have to be very careful about how you take the user's  
21 query and match it to what the advertiser might be interested  
22 in."

23 Do you see that?

24 A. Correct. I talked about similar things, about why this  
25 helps SVPs be better at targeting advertising.

1 Q. Right. But my point is, for the specific query, whether  
2 it's one SVP or another, knowing the specific intent of the user  
3 is vital; right?

4 A. Right. The demand-side analysis, the demand-side  
5 substitution would be different. So the user would have choices  
6 in each case, but those choices would differ.

7 Q. If someone wants to look for tickets, that's not available  
8 on Amazon. If someone wants to kill vermin, then maybe Amazon  
9 may have a solution.

10 So knowing which of the two is important; right?

11 A. Right. And the user knows, and therefore, the user can  
12 choose which competitors are relevant.

13 Q. But your analysis says that if a word is issued on both  
14 Google and Amazon, then there's an overlap, but it may be that  
15 just because that word is issued on both, the user intent is not  
16 overlapping at all, like "mousetrap"?

17 A. It's -- some of the searches on Google might not actually  
18 have been for the shopping. I think that's a strength of Amazon  
19 and a weakness of Google.

20 I agree, in the data, you have to use the queries you have  
21 to try to do the best we can with data. But that's a strength  
22 of Amazon, that they know -- they can give the user exactly what  
23 the user wants.

24 Q. I just want to make sure I get a clean answer to my  
25 question, sir. And it is that, beyond the actual term that is

1 typed in, the fact that both Google and Amazon may have some  
2 response to it doesn't mean that their answers are overlapping.  
3 They may be providing completely different types of information;  
4 right?

5 A. Well --

6 Q. Let me try it this way, sir. Google and Amazon don't  
7 compete for the term "mousetrap" if I'm looking for tickets.

8 A. Other things compete with Google.

9 Q. But Amazon doesn't?

10 A. In that case, Amazon is not the relevant competitor.

11 Q. And so knowing what the person is looking for, the intent  
12 is relevant; right?

13 A. Right, and very helpful to SVPs, because they can infer  
14 more about intent than Google can.

15 Q. So let's go to -- we don't have to go back to your  
16 slide 20, but the data that you used for your query analysis  
17 there was broken down by individual query; is that right?

18 A. It's a week's query-level data.

19 Q. And Valentine's Day would be an individual query that was  
20 in your set; is that right?

21 A. Yes.

22 Q. Valentine's Day on Google, UPXD82, let's pull that up. The  
23 links are to Wikipedia, Britannica, history.com, and Internet  
24 Movie Database.

25 Do you see that?

1 A. I do.

2 Q. Okay. And I can pull up the Amazon one, but for brevity,  
3 in fact, none of those are going to show up if I put  
4 in "Valentine's Day" on Amazon; is that right?

5 A. I agree.

6 Q. Okay. So the fact that Valentine's Day is both in your red  
7 bar and -- I mean in your Amazon bar and your Google bar doesn't  
8 mean that they're actually competing for Valentine's Day  
9 searches. In fact, on this one, the one that's on the screen,  
10 the very first thing that Google provides is, what, the date, in  
11 case that that's what the person was looking for? Do you see  
12 that?

13 A. I see that, yeah.

14 Q. Okay. So the fact that there are overlapping terms between  
15 Google and Amazon on your bars doesn't mean that they're  
16 actually competing for the same term with the same intent?  
17 People clearly on Google are not looking for the same stuff that  
18 they're looking for on Amazon, because Google doesn't offer that  
19 stuff?

20 A. I mean, they do. Some of them might be. If you went  
21 farther down, I'm sure there are Google links for where to buy  
22 Valentine's Day things.

23 I agree the specific SVP -- again, we should be doing this  
24 on the demand side. The user knows what they want, and if they  
25 want flowers, then Google competes with something like FTD. If

1 they want, you know, chocolates to buy, Google probably competes  
2 with Amazon.

3 My point is only that each of those Google queries faces  
4 competition.

5 Q. Let's go back to your slide 20. This is the problem with  
6 the slide 20. The yellow bar in the middle, all that tells us  
7 is that Valentine's Day was both on Google and Amazon; right?

8 A. The yellow bar tells me it was on Amazon.

9 Q. Right. And the fact that it was on Amazon doesn't mean  
10 that the person who put it into Amazon had any of the same  
11 interests that the person who put it into Google. They may have  
12 completely different intents.

13 A. The first -- sorry.

14 Q. No, please.

15 A. The person who put it into Amazon clearly wanted to shop.

16 Q. Right.

17 A. Some of the people who put it in Google probably didn't  
18 want to shop. So the Google bar probably is too high. So  
19 Amazon is even stronger for shopping relative to Google than  
20 this says.

21 Q. The fact that terms are overlapping doesn't tell you  
22 anything about how -- what people thought of the terms? And I  
23 think that you said that Valentine's Day was the number 1 query  
24 in the analysis on slide 20; is that right?

25 A. It would depend on which. Maybe that's true for Google.

1 It would depend.

2 But another way I did slide 20 is to take the top 25 Amazon  
3 queries. Those are all shopping queries. And I said how many  
4 of them show up at Google. That's telling you how often Google  
5 gets those queries. If some of those are not shopping queries,  
6 I'm just making the GSE bar look a little higher.

7 But these are all -- in Amazon's case, these are all  
8 shopping queries, and Google gets a lot of shopping queries,  
9 too.

10 Q. Let's go to slide 18. So this is a -- you call this "usage  
11 pattern"; is that right?

12 A. Yes.

13 Q. This is only Android and only phone; right?

14 A. No, this includes all laptop use. On the phone side, it  
15 only includes Android.

16 Q. So all laptop plus Android; is that right?

17 A. Correct.

18 Q. Okay. And --

19 A. Or all PC plus Android.

20 Q. Okay. And it says "usage patterns"; right?

21 A. Yes.

22 Q. And I believe you told the Court this, but I want to make  
23 sure we get this right. This doesn't tell us anything about  
24 queries; you're not counting queries?

25 A. Right. Usage of a GSE is entering a query on the GSE. But

1 on the SVP side, I can't see what they're typing in exactly. So  
2 I tried to be clear, I hope I was, that this is using an SVP.

3 Q. So on flights, if I -- if I go to the flight to check my  
4 flight status, if I go to book tickets, it could have -- there  
5 could be no searches involved on the SVP side; right?

6 A. I guess for a given user. If you think about how you use  
7 Expedia, a fair bit of that is searching until you buy. So no  
8 searching at all would surprise me, but I would agree with the  
9 point that some final action might have been to purchase the  
10 ticket.

11 Q. Okay. But you haven't measured it? You have no visibility  
12 as to what people are doing on the SVP side; right?

13 A. Right. I have tried to do things like, you know, one  
14 version of what you do with flights includes the airline's  
15 website itself where you can do a lot of searching. But I think  
16 you're right, you probably also check your flight and so on.

17 So I've limited this in other versions to just things like  
18 Expedia and Travelocity, where a lot of the behavior is likely  
19 searching.

20 But I take the point and hope I was clear that it also  
21 could include some additional activity on the SVP.

22 Q. It could actually be most of the activity on the SVP,  
23 because you don't have any visibility, just to be clear.

24 A. I think that's quite unlikely, given how these SVPs are  
25 used, but I can't give you a number from the data.

1 Q. Okay. And again, this excludes nav queries; is that right?

2 A. I'm not recalling as I sit here.

3 Q. Okay. If I search Amazon on Google and then go to Amazon  
4 and buy a toaster, that counts as one for the GSE and one for  
5 the SVP; is that right?

6 A. Right. That would be one usage of a GSE and one usage of  
7 an SVP.

8 Q. Okay. Now, in your original analysis, you included banks,  
9 and you included hotels; right?

10 A. I mean, not on the ones that are on here, but I had a  
11 finance version and a hotel version. And there was a version, I  
12 think it was the first one, that included the banks and the  
13 hotels on the SVP side.

14 Q. Okay. And you withdrew those because you realized that  
15 there's such a significant amount of usage that's nonsearch that  
16 they weren't worth showing; right?

17 A. I wouldn't say I withdrew them. I showed it the other way,  
18 too, to show the results didn't change. If you think about -- I  
19 just gave the example of airlines. Personally, I do all of my  
20 airline searches on aa.com because -- the AA app. because that's  
21 where I'm going to go. So I did a version that included that as  
22 an SVP.

23 But I recognize that other people may use it in other ways,  
24 and it's not, you know, a broad -- it's not a multisite SVP. So  
25 I did a version that took it out to show that the conclusions

1 don't change.

2 Q. No further questions on that slide.

3 THE COURT: Just to be clear on slide 18, the SVPs  
4 refer to what I will just call sort of aggregated SVPs and  
5 doesn't include the specific airline or, for example, a specific  
6 retail merchant?

7 THE WITNESS: It wouldn't include -- well, I think the  
8 version that's on slide 18 includes -- includes airlines and the  
9 merchants. There's another version in the report where the  
10 basic patterns stay the same. It takes those out.

11 But I think the version that's here was the original  
12 version where it's everything that Google method pops up as an  
13 SVP. That would include airlines.

14 On the shopping side, it would be -- those are basically  
15 aggregators -- I mean, retailers. So amazon.com, walmart.com  
16 would be included.

17 On auto, this isn't really an issue. Auto is going to be  
18 things like cars.com and those sorts of searches.

19 So flights is the one where I think this version does  
20 include the airlines, but I've done a version that doesn't where  
21 you have this same basic pattern, that it's in the middle of the  
22 other two.

23 BY MR. DINTZER:

24 Q. Slide 44, sir, you talk about but-for worlds.

25 Do you recall?

1 A. Yes.

2 Q. Okay. And just to be clear, you have not developed a  
3 counterfactual but-for world where Google doesn't enter into the  
4 challenged contracts; is that right?

5 A. I have not fully specified such a but-for world. I've  
6 tried to provide information I think would be informative in  
7 thinking about it, but I have not fully specified a but-for  
8 world.

9 Q. You haven't articulated the elements of a -- are you  
10 offering an opinion about the conclusion in a but-for world or  
11 not, sir?

12 A. Can you ask that again?

13 Q. Sure. Let me rephrase.

14 You've developed no counterfactual world where Google  
15 doesn't enter into the challenged contracts; right?

16 A. If by developed counterfactually, you mean have I sort of  
17 done some economic modeling or presented my own version of what  
18 output would be in that world, then the answer is I have not.

19 Q. Okay. You did not predict Bing's quality level absent the  
20 challenged conduct; right?

21 A. Yeah, I mean, that would require some economic modeling  
22 that, you know, I point out here plaintiffs would need to do,  
23 but I also have not done that.

24 Q. You have not modeled what Google's general search engine  
25 rivals would look like absent the challenged conduct?

1 A. Sorry. That one went fast for me.

2 Q. Of course. You have not modeled what Google's general  
3 search engine rivals would look like absent the challenged  
4 conduct?

5 A. Yeah, again, I've provided opinions that I think are  
6 relevant, but I have not done a model of that.

7 Q. Let's go to slide 120.

8 Are you there, sir?

9 A. Yes. You guys get me there quickly.

10 Q. That's Jorge. He's doing a terrific job.

11 You testified that the search market and search ads  
12 market -- well, let's focus on the search market. The search  
13 market has outperformed the industry expectations.

14 I guess you use this for both, don't you?

15 A. It's advertising only, because I can use eMarketer data.  
16 So here, I present digital advertising. There's a version in  
17 the reports which is search advertising.

18 Q. But you didn't provide that in court; right?

19 A. I only presented digital advertising, because in my view  
20 that's the more relevant set of competitors.

21 Q. Okay. And eMarketer separately tracks -- well, you used  
22 eMarketer for the expectations in the search ad market; right?

23 A. These are their projections.

24 Q. Okay. And then what happened is they continued to make  
25 projections, and they continued to come out low; is that right?

1 A. In almost all cases, as I discussed, they were below what  
2 actually happened.

3 Q. And they could have underpredicted the growth in the search  
4 market for a number of reasons; right?

5 A. Yes.

6 Q. Okay. And you haven't done a formal analysis breaking down  
7 why they underperformed -- why eMarketer underestimated year  
8 after year; right?

9 A. That's correct. I'm just presenting their projections and  
10 making the comment that, you know, it's at least true that any  
11 alleged behavior hasn't pulled things below their projections,  
12 but I'm not doing more than that.

13 Q. And the projections cover many years under different  
14 conditions; is that right?

15 A. Yes.

16 Q. And the evidence of industry performance is not dispositive  
17 regarding monopoly power; right?

18 A. Yeah, I think I said that. It's a piece of evidence, but  
19 it's not the end of the inquiry.

20 Q. Now, if Google faced no competition hypothetically, it  
21 would still try to raise its profits; right?

22 A. I mean, it would try to maximize profits, yes.

23 Q. Well, it would try to raise them, too. If they saw an  
24 opportunity to raise their profits, even as a monopolist with no  
25 competition, they would still pursue those; right?

1 A. Sure. They would try to make them as high as they could.

2 Q. Okay. And even if Google faced no competition, it would  
3 try to raise output; right?

4 A. Try to raise output?

5 Q. Yes, if that made more profits.

6 A. I think you would seek to maximize profits. So in general,  
7 the characteristic of monopolies is they find it profitable to  
8 reduce output because that creates scarcity and increases  
9 profits. So a key economic characteristic of a monopoly is  
10 output reduction.

11 But broadly, I agree they would take the steps that would  
12 increase their profits.

13 Q. Right. So if certain efforts would increase Google's  
14 profits, even if it was a monopolist, it would still have a  
15 financial incentive to take those efforts; right?

16 A. I guess increase output relative to what?

17 THE COURT: Can I ask a question? Sorry to interrupt.

18 MR. DINTZER: No, please.

19 THE COURT: Your point on the ordinary monopolist and  
20 wanting to restrict output to create scarcity, I can understand  
21 that for most products.

22 Does that -- do you think that still holds true for a  
23 product like this in which the creation of scarcity -- well, let  
24 me put it differently.

25 Not creating scarcity would not -- would actually benefit

1 the monopolist in the sense that there's no limit in terms of  
2 what the monopolist can produce because of the nature of the  
3 product.

4 THE WITNESS: Right.

5 THE COURT: Does that make sense?

6 THE WITNESS: I think on the search side -- so I mean,  
7 there's -- it's not a capacity constraint issue. It's a under  
8 the allegations what can I charge for the advertising issue.

9 THE COURT: Right.

10 THE WITNESS: So the scarcity would be fewer queries  
11 or in some way less unlimited access to these things for  
12 advertisers so that I could raise the advertising price. That  
13 would be the argument.

14 I mean, I agree the search side is strange here in lots of  
15 ways because it's not being explicitly priced. But I think the  
16 point would be if you -- you asked yesterday if you could make  
17 fewer and fewer auctions so that you could artificially restrict  
18 the number of auctions such that you could get higher prices.

19 That's where I think you would look for an output  
20 restriction.

21 THE COURT: I guess I'm having trouble understanding  
22 why the creation of ad scarcity or search ad scarcity on Google  
23 would benefit it, if it were a monopolist. This is all,  
24 obviously, a hypothetical.

25 THE WITNESS: Monopolists produce to the point where

1 they're thinking about -- so you have to sort of think of a  
2 monopolist as it approaches -- this is why it has to be compared  
3 to a but-for world.

4 So imagine there's a competitive level of output, and the  
5 monopolist is thinking about should I get all the way to the  
6 competitive level of output. The thing that a monopolist thinks  
7 about that the competitive level doesn't think about is if I  
8 keep increasing output towards that level, that's going to put  
9 downward pressure on the price.

10 So at some point, the monopolist says it's not profitable  
11 to me anymore because I internalize the fact that it reduces the  
12 price. Whereas in a competitive market, there's lots of  
13 players. They're all producing. They don't control that output  
14 level. They all think it's worth producing one -- they're kind  
15 of price takers is a term we use.

16 So if it's a competitive market and I'm a price taker, I  
17 say I should sell one more because I sell one more and I get the  
18 price. If it's a monopoly market, at some point, I say if I  
19 sell one more, that drives down the price, and that's bad for  
20 me.

21 So the key feature of monopoly is they don't consider that  
22 last 5 percent of output to be profitable, because they think  
23 man, if I do that, prices come down. Whereas, in a competitive  
24 market, people think man, if I do that, I can capture that  
25 additional -- I can sell those, and I don't have the same effect

1 on price that a monopolist would, because I'm just one of many.

2 So the thing that makes sort of this -- sort of abstract --

3 THE COURT: Is part of that analysis typically the  
4 fact that the marginal cost is going to -- in a world where  
5 you're creating widgets, your marginal cost is going to -- or  
6 there's going to be a cost associated with the creation of these  
7 widgets.

8 It seems to me the cost associated with the publication of  
9 a new ad -- sure, there's some cost, but it's fairly low.

10 THE WITNESS: So suppose the marginal cost is zero.  
11 Let's just take that version. The issue is on the demand and  
12 marginal revenue side, not the marginal cost side.

13 So just suppose the marginal cost is zero. In a  
14 competitive market, right, people are going to just keep  
15 producing ads until the price gets driven all the way down close  
16 to zero. Now, it's not literally zero here. There are costs.  
17 So that's not what we see.

18 But in a monopoly market, if it's truly a monopoly, you  
19 would think about the marginal revenue, not the price, and the  
20 marginal revenue incorporates the fact that if I produce more,  
21 that drives price down.

22 So the issue is, a monopolist marginal revenue curve lies  
23 below the price curve, and so they produce less, because they're  
24 thinking about this effect on prices, which is why the key thing  
25 you look for is are they actually restraining output, because

1 that tells me that they're acting the way a monopolist would  
2 act. But it's about the fact that their marginal revenue  
3 differs from the price.

4 This is all pretty abstract, like, econ stuff, but that's  
5 the -- the issue is that they think -- again, it's not like I'm  
6 going to produce nothing. But as we get closer to the margin,  
7 they think if I produce more, I worry about the selling a few  
8 more -- if I could produce widgets even for free, they would  
9 still say this last 10 percent I was going to produce isn't  
10 worth it because the price-reducing effect offsets the quantity  
11 expansion effect.

12 THE COURT: Okay. Thanks.

13 MR. DINTZER: Thank you, Your Honor.

14 BY MR. DINTZER:

15 Q. Sir, even monopolists have some incentive to invest; right?

16 A. That's correct.

17 Q. Let's go to slide 46.

18 This is your R&D analysis; is that right?

19 A. Correct.

20 Q. Okay. And your R&D analysis regarding Google spending are  
21 mostly worldwide; right?

22 A. I think these are worldwide figures. I think that was -- I  
23 think that's what was available.

24 Q. Okay. So some of Google's R&D spending are allocated to  
25 different regions of the world not involving the United States;

1 right?

2 A. That's definitely true in general.

3 Q. Okay. So R&D spend on search in Egypt would not  
4 necessarily be relevant to the U.S. market; right?

5 A. It would have limited relevance. Maybe not none, but --

6 Q. Okay. Some elements of R&D relate more to certain  
7 geographies than others; is that fair?

8 A. I think that's fair of some. Obviously, lots of the R&D is  
9 general, but there certainly is region-specific R&D, to some  
10 extent.

11 Q. Okay. And you combine that Google and Alphabet are in the  
12 expenditures; right?

13 A. Yes.

14 Q. YouTube is a profitable business for Alphabet; is that  
15 right?

16 A. Yes.

17 Q. Okay. But whatever R&D is directed at YouTube, you're  
18 still putting it on this chart as something relevant for what  
19 you're trying to show on exhibit -- slide 46; right?

20 A. Right. We talked about this some. I'm including all  
21 Alphabet revenue intentionally, because my read of the record  
22 and experience with Google is everything they do -- or much of  
23 what they do is designed to increase Internet activity and  
24 thereby increase search.

25 Q. Right. And you include self-driving cars on this chart,

1 too; right?

2 A. Their statements have been quite explicit, that they see  
3 the benefit as people will spend more time on the Internet and  
4 therefore more time searching.

5 Q. For self-driving cars?

6 A. Yes.

7 Q. Okay. So this captures all the investment in self-driving  
8 cars, as well as anything directly related to search; right?

9 A. To be clear, this is all of Alphabet. You could make a  
10 decision either way, but I think a fair read of what Google says  
11 is they are, for most of what they do, hyperfocused on the  
12 effects on search.

13 Q. Okay. Slide 45, the one right before it.

14 A. Mine didn't move.

15 Q. We'll get it for you, sir. Okay.

16 This is supposed to measure output; is that right?

17 A. This is, as it says, "total GSE-specific query volume."

18 Q. You agree there's not a single correct measure of output  
19 for a general search engine?

20 A. I don't think there's one perfect measure of output  
21 probably in any case anyone does. This is a good one.

22 Q. And you will agree that increased network speeds led to  
23 more Internet usage and to more searches over this entire time?

24 A. Yeah, that sounds right.

25 Q. Okay. And more Internet usage meant more search

1 advertising; is that right?

2 A. I mean, more Internet usage likely led to more searches.  
3 Again, that's a part of why Google invests in the Internet. And  
4 more searches would lead to more search advertising, yes.

5 Q. Increased adoption of mobile phones over the last 15 years  
6 also led to more searches; is that right?

7 A. Right, I agree.

8 Q. And so this chart only measures output increases for the  
9 industry; they don't tease out any factors that -- you know,  
10 whether Google led to or caused any of this increase; right?

11 A. This chart doesn't tease out the causes. You're giving  
12 good examples of what we were discussing on the last chart about  
13 why Google invests in things like Android, because it's trying  
14 to increase Internet usage and, therefore, increase searches.

15 So Google has a lot to do with this, but this chart doesn't  
16 tease that out.

17 Q. Let's go to DXD59.

18 We're talking about ads now, sir. Do you see it, sir?

19 A. Yes.

20 Q. Okay. And so my understanding is what you've done here  
21 with the green arrows is show the elements that are in each of  
22 the three alleged ad markets; is that right?

23 A. Yes.

24 Q. Okay. And on the left-hand column, in the sixth  
25 row, "other SVPs," you have a red X; is that right?

1 A. I do.

2 Q. Okay. You do realize that the DOJ search advertising  
3 market had some advertising on SVPs; right?

4 A. My understanding would be if it was on the SERP. So you  
5 could split them all out the way I did for Amazon. I take that  
6 point. It just would make the chart very long. But I take the  
7 point that if it's on a SERP, it would be included.

8 Q. So that red X for "other SVPs" is just wrong? I mean, if  
9 there's a SERP, then there's a green arrow there; right?

10 A. I would call that a check mark. Yeah, I mean, it's an X in  
11 the sense that they're not fully included. But you're right, to  
12 the extent they're on a SERP, they would be included.

13 Q. And is that true with Facebook ads, too, to the extent they  
14 were the result of a search?

15 A. I think that's right. That's a very small percentage on  
16 Facebook, but yeah, I take that point.

17 Q. Okay. Let's go to UPX006.

18 Your Honor, this is in evidence.

19 Sir, you've got it in your binder, but you also have it in  
20 front of you. Do you recognize this document, sir?

21 A. I think so, but it's very hard to tell from just the cover  
22 page.

23 Q. It's in your binder. You're welcome to look at it, if you  
24 would like. It's an October 2019 document called "Search State  
25 of the Union." Just let me know when you're there, sir.

1 A. I'm here. I'm not sure whether I recall this. I've seen  
2 figures and charts that look like this, but I'm not sure if it  
3 was from this document.

4 Q. Okay. That's fine. Let's go to the fourth page, which is  
5 Bates 329. And the left-hand graph is "America's digital ad  
6 spend" in billions.

7 Do you see that? We're going to make it bigger to make it  
8 a little easier.

9 Do you see that, sir?

10 A. I do.

11 Q. It breaks out search, video, and display separately; right?

12 A. It has a section of the bar for each of those.

13 Q. So their analysis, Google's analysis in this document is  
14 breaking out search and display and video as separate areas that  
15 they consider; is that correct?

16 A. Yeah, I mean, they're certainly well-defined areas. I  
17 think most of what I presented, I defined them as competitors  
18 but distinct forms.

19 Q. And then on the right, if you look at the right-hand chart,  
20 and Google breaks down its search from the rest of the industry,  
21 its search market share -- this is ads, I believe -- as compared  
22 to the rest of the industry.

23 Do you see that?

24 A. I do.

25 Q. And they show 79 percent in 2023.

1 Do you see that?

2 A. I do.

3 Q. And with respect to ads, Google Search market share  
4 percentage, you don't have any reason to disagree with these  
5 numbers; right?

6 A. I don't know what they're computing here. I'm not saying  
7 they did anything wrong. I just don't know what they're  
8 including.

9 Q. Okay. Let's go back to page 2, 327. This is the executive  
10 summary.

11 Do you see that, sir?

12 A. I do.

13 Q. And the first bullet -- let's see if we can make that a  
14 little bigger for you.

15 It says, "Google Search is expected to increase market  
16 share to 80 percent."

17 Do you see that?

18 A. I see that sentence, yes.

19 Q. You don't have any reason to disagree with that, do you,  
20 sir?

21 A. I don't know what you mean by "reason to disagree."

22 It seems like what someone at Google was projecting in  
23 2019. So I guess a reason to disagree would be that in my  
24 experience, I talk about in the reports the world of digital  
25 advertising has changed dramatically in the last four years,

1 especially post-COVID. So I would disagree with the use of a  
2 2019 projection as meaning much today, but I don't disagree that  
3 somebody projected this.

4 MR. DINTZER: No further questions on that document.

5 And Your Honor, I think we're at a good point.

6 THE COURT: All right. Dr. Israel, we will resume on  
7 Monday. Let me talk just to the parties and figure out what  
8 time we will get started.

9 THE WITNESS: Thank you.

10 THE COURT: Thank you. Have a nice weekend. And just  
11 the same reminder not to discuss your testimony with anyone.  
12 Thank you.

13 Mr. Dintzer, where are we in terms of timing for your  
14 examination?

15 MR. DINTZER: We are past Search, and we are into  
16 Search Ads, and my team tells me that I am terrible about  
17 estimating the timing.

18 THE COURT: I would concur with your team.

19 MR. DINTZER: Two hours. I'm getting that from people  
20 who are better at this than I am. That's a rough estimate, but  
21 it still brings us well under what I believe the -- anyway, two  
22 hours.

23 MR. SCHMIDTLEIN: No, you would be over --

24 MR. DINTZER: That's why I stopped.

25 Your Honor, we need to cover what --

1 THE COURT: I'm just trying to figure this out.

2 Mr. Cavanaugh?

3 MR. CAVANAUGH: About an hour, hopefully less.

4 THE COURT: Okay. So maybe we -- if we start with  
5 Dr. Israel Monday, maybe we finish by lunch, maybe we don't,  
6 including some time for redirect.

7 Say we don't -- maybe an easier way to do this, how long is  
8 your fact witness on Monday likely to take, all in?

9 MR. SCHMIDTLEIN: The direct is going to be no longer  
10 than an hour and a half and hopefully closer to an hour.

11 THE COURT: Okay. And who is it?

12 MR. SCHMIDTLEIN: Jennifer Fitzpatrick.

13 THE COURT: And she is?

14 MR. SCHMIDTLEIN: A current Google senior executive.

15 THE COURT: Okay. And I take it no closed session is  
16 expected?

17 MR. SCHMIDTLEIN: I don't believe so.

18 THE COURT: All right. So what do you all think from  
19 plaintiffs in terms of expected cross? Are both sets of  
20 plaintiffs expected to cross or just DOJ?

21 MR. CAVANAUGH: We do have some.

22 THE COURT: You will?

23 MR. CAVANAUGH: Yeah.

24 THE COURT: All right. So it sounds like we have some  
25 degree of confidence that we could start with Dr. Israel, finish

1 him either right before lunch or shortly after, and still get to  
2 Ms. Fitzpatrick's testimony and finish her by the end of the  
3 day.

4 Okay. All right. So let's do our best, and I'm sort of  
5 looking at this side of the room, to stick to that timetable on  
6 Monday, because I would like to finish Dr. Israel up and not  
7 break him up to get to Ms. Fitzpatrick. So let's try and stick  
8 to that, if we can, please.

9 All right. I don't have anything else. Does anybody else?

10 MR. SOMMER: I have one very brief thing.

11 This morning, we walked in to court and were handed four  
12 more documents for confidentiality review. It's impossible for  
13 us to consult with our client at 9:15 or 9:30 in the morning,  
14 particularly since people are on the West Coast. I'm begging  
15 them to try to do better. It's really becoming unfair. It's  
16 very difficult.

17 THE COURT: Okay.

18 MR. DINTZER: Your Honor, all I can say is that we  
19 hadn't -- this is cross-examination. This is not like a fact  
20 witness where we have a sense of what the witness is going to  
21 testify about. So -- and we've only used -- we've used exactly  
22 one today. So the rest we are saving until Monday.

23 So we're doing our best, given the -- as we watch his  
24 real-time testimony, trying to figure out what we're going to  
25 use.

1           MR. SOMMER: I'm sympathetic to what goes on during  
2 trial, but it's hard for me to believe they found these  
3 documents this morning. At a minimum, they had them last night.

4           I'm just asking them to try to do better. I know stuff  
5 comes up during trial. I get it. But they want answers from us  
6 when we walk in the courtroom, and we can't give them.

7           THE COURT: That's fair. I've asked both sides to  
8 make sure that this confidentiality review takes place  
9 sufficiently in advance. I've also tried to be flexible. But  
10 again, you know, once you are aware you're going to be using an  
11 exhibit that hasn't already been disclosed, just send it over,  
12 even if that means sending over multiple e-mails. At least that  
13 way, Mr. Sommer can have things sooner rather than later or any  
14 of the other counsel.

15          I don't think there's a -- from what I'm hearing, they  
16 would rather have the exhibits sooner rather than later, even if  
17 that means getting multiple e-mails or multiple communications  
18 that there's a new record going to be used. Okay?

19          MR. DINTZER: We will accommodate that, Your Honor.  
20 Just so you know, obviously, it was a late one for us.

21          THE COURT: I saw that the Amazon ad had the late-  
22 night score of the football game. The Amazon demonstrative, I  
23 should say.

24          MR. DINTZER: But we will respect that, Your Honor,  
25 and do that as we can.

1 THE COURT: All right. Thank you, Mr. Sommer.

2 Anything else?

3 MR. DINTZER: Just one thing, Your Honor.

4 As I understand the way that Google is structuring next  
5 week, we now have four videos to be shown in court. Obviously,  
6 if that's the -- I mean, we're here for it if that's how they're  
7 going to structure it. The last time, we got Ms. Baker's video  
8 with very little notice, and so we had to turn it around. So  
9 we're looking at sort of the other side of things. We would  
10 like to have at least 72 hours' notice. This is something  
11 obviously they've had for a long time, for each video that we're  
12 going to have to look at and sign off on, so we don't have to  
13 run around.

14 THE COURT: When you say -- do you mean the finished  
15 product, or do you just mean your designations?

16 MR. DINTZER: No, the finished product. After we  
17 designate, we want to see what it is is going to be shown in  
18 court to make sure we don't have any issues with it, Your Honor.

19 THE COURT: Okay. All right.

20 MR. SCHMIDTLEIN: These are not -- these are not  
21 surprises like the confidentiality documents. These are  
22 depositions that have been designated extensively pretrial.  
23 We've gone back and forth on those.

24 What we frankly are doing, Your Honor, is trying to narrow  
25 those into shorter, almost highlight reels for you so that they

1 are not -- because unfortunately, some of the designations by  
2 both sides, you know, if you're not showing it in court, they're  
3 candidly way too long.

4 And so what we've been trying to do is actually reduce  
5 those, and we've been getting them over to them in sort of the  
6 reduced fashion so that hopefully our expectation is that they  
7 will have reduced counterdesignations, in the spirit of trying  
8 to get you something that is not longer than it needs to be.

9 So we are certainly getting them today.

10 MR. GREENBLUM: We got them all to them last night.

11 MR. SCHMIDTLEIN: Yes, and we certainly will not be  
12 playing any video on Monday. I think the earliest we might  
13 start showing some video potentially could be now probably  
14 Wednesday, given where we are. So I think they have plenty of  
15 time.

16 THE COURT: Mr. Schmidtlein, what's your thinking in  
17 terms of your case?

18 MR. SCHMIDTLEIN: Our last witness will be Professor  
19 Murphy, and he will be called on Monday, November the 13th.  
20 He's going to be a several-hour witness, I anticipate, but we  
21 anticipate that he will be done -- certainly, our direct will be  
22 done during the day on Monday, and depending on when the cross  
23 finishes, I would anticipate and expect that the cross will be  
24 done on Tuesday, Tuesday the 14th, at the latest.

25 THE COURT: Okay. All right. So I think we remain on

1 track, then, in terms of --

2 MR. SCHMIDTLEIN: Yeah, we -- obviously, we don't know  
3 the extent of this supposed rebuttal case that we're going to  
4 get. We have filed a motion with Your Honor directed at a  
5 witness who we think is an inappropriate rebuttal witness. I  
6 don't know if they're still planning on calling that witness.  
7 The last time we checked with them and asked them whether they  
8 were going to call the witness, they said it was still a  
9 possibility.

10 At this juncture, we haven't gotten any indication as to  
11 the breadth. I assume it's going to be Professor Whinston and  
12 potentially one other expert and then this third disputed  
13 expert, I suppose, if they're going to continue to call that  
14 witness.

15 THE COURT: I haven't had a chance to review the  
16 motion, but are there any representations in terms of that  
17 witness at this point?

18 MS. GRAY: Yes, Your Honor. This is Sara Gray for the  
19 United States.

20 We were going to briefly address it and ask -- we believe  
21 that the motion is premature, because we haven't really decided  
22 entirely who we're going to call in rebuttal. We would like to  
23 make clear to the Court that if we do call Mr. Davies, that it  
24 would be to rebut Professor Murphy's testimony on Monday.

25 We would ask that you consider delaying any sort of

1 consideration until after we submit our witness list on  
2 Wednesday.

3 THE COURT: Okay. All right. And was this -- I don't  
4 know if we need to resolve this today, but was the expert --  
5 this expert, was he designated as a rebuttal expert in the  
6 course of discovery?

7 MS. GRAY: He was an affirmative expert for DOJ  
8 plaintiffs. Professor Murphy -- Mr. Davies responded directly  
9 to Professor Murphy's rebuttal report. Professor Murphy cited  
10 to Mr. Davies over 100 times, and Mr. Davies responded in his  
11 reply report.

12 THE COURT: Okay. Mr. Schmidtlein?

13 MR. SCHMIDTLEIN: Just to be clear, Mr. Davies  
14 submitted an expert report on the initial deadline. He was  
15 disclosed as an affirmative expert in the first round. They did  
16 not call him in their case-in-chief.

17 So for all the reasons we've set forth in the motion, he is  
18 not an appropriate rebuttal witness at this point.

19 THE COURT: Okay. All right. I will take a look at  
20 the motion. I would urge DOJ to be in a position to, if you do  
21 make the decision to want to call him, to have something in  
22 writing that I can take a look at before I rule. Okay?

23 MS. GRAY: Sure. Thank you.

24 THE COURT: All right. With that, is there anything  
25 else?

1 MR. DINTZER: Nothing from the DOJ plaintiffs, Your  
2 Honor.

3 MR. CAVANAUGH: Nothing further, Your Honor.

4 MR. SCHMIDTLEIN: Nothing further, Your Honor.

5 THE COURT: Thank you all very much. Have a nice  
6 weekend. We will see you all on Monday.

7 (Proceedings adjourned at 12:38 p.m.)
